Introduction

ICONS

Indicates a safety alert. Read the following section on *Warnings*.

Indicates vehicle information related to recycling and other environmental concerns will follow.

Correct vehicle usage and the authorized disposal of waste cleaning and lubrication materials are significant steps towards protecting the environment.

Indicates a message regarding child safety restraints. Refer to *Seating and safety restraints* for more information.

Indicates that this Owner Guide contains information on this subject. Please refer to the Index to locate the appropriate section which will provide you more information.

WARNINGS

Warnings provide information which may reduce the risk of personal injury and prevent possible damage to others, your vehicle and its equipment.

BREAKING-IN YOUR VEHICLE

There are no particular breaking-in rules for your vehicle. During the first 1 600 km (1 000 miles) of driving, vary speeds frequently. This is necessary to give the moving parts a chance to break in.

INFORMATION ABOUT THIS GUIDE

The information found in this guide was in effect at the time of printing. Ford may change the contents without notice and without incurring obligation.

Instrumentation

Instrumentation

Instrumentation

Instrumentation

WARNING LIGHTS AND CHIMES

Standard analog instrument cluster

Optional electronic instrument cluster

Charging system

Illuminates when the ignition is turned to the ON position and the engine is off. The light also illuminates when the battery is not charging properly, requiring electrical system service.

Air bag readiness

Momentarily illuminates when the ignition is turned ON. If the light fails to illuminate, continues to flash or remains on, have the system serviced immediately.

**AIR
BAG**

Instrumentation

Safety belt

Momentarily illuminates when the ignition is turned to the ON position to remind you to fasten your safety belts. For more information, refer to the *Seating and safety restraints* chapter.

Brake system warning

Momentarily illuminates when the ignition is turned to the ON position. Also illuminates if the parking brake is engaged. If the brake warning lamp does not illuminate at these times, seek service immediately. Illumination after releasing the parking brake indicates low brake fluid level and the brake system should be inspected immediately.

Engine oil pressure

Momentarily illuminates when the ignition is turned to the ON position and the engine is off. Illuminates when the oil pressure falls below the normal range. Stop the vehicle as soon as safely possible and switch off the engine immediately. Check the oil level and add oil if needed. Refer to *Engine oil* in the *Maintenance and Care* chapter.

Door ajar

Illuminates when the ignition is in the ON or START position and any door is open.

High beams

Illuminates when the high beam headlamps are turned on.

Instrumentation

Turn signal

Illuminates when the left or right turn signal or the hazard lights are turned on. If one or both of the indicators stay on continuously or flash faster, check for a burned-out turn signal bulb. Refer to *Exterior bulbs* in the *Maintenance and care* chapter.

Speed control

This light comes on when either the COAST/SET or RES/ACCEL controls are pressed. It turns off when the cruise cancel control is pressed, the brake is applied or the ignition is turned to the OFF position.

Low fuel

Illuminates as an early reminder of a low fuel condition indicated on the fuel gauge (refer to *Fuel Gauge* in this chapter for more information).

When refueling, after the light comes on, the amount of fuel that is added will be less than the advertised capacity since there is fuel still in the tank. The ignition must be in the ON position for this lamp to illuminate. The lamp will also illuminate for several seconds after the ignition is turned to the ON position regardless of the fuel level to ensure your bulb is working.

Anti-lock brake system (ABS) (if equipped)

Momentarily illuminates when the ignition is turned to the ON position. If the light remains on, continues to flash or fails to illuminate, have the system serviced

immediately. With the ABS light on, the anti-lock brake system is disabled and normal braking is still effective unless the brake warning light also remains illuminated with parking brake released.

Service engine soon

Your vehicle is equipped with a computer that monitors the engine's emission control system. This system is commonly known as the On Board Diagnostics System (OBD II). The OBD II system protects the environment by ensuring that your vehicle continues to meet government emission standards. The OBD II system also assists the service technician in properly servicing your vehicle.

The *Service Engine Soon* indicator light illuminates when the ignition is first turned to the ON position to check the bulb. If it comes on after the engine is started, one of the engine's emission control systems may be malfunctioning. The light may illuminate without a driveability concern being noted. The vehicle will usually be drivable and will not require towing.

What you should do if the Service Engine Soon light illuminates **Light turns on solid:**

This means that the OBD II system has detected a malfunction.

Temporary malfunctions may cause your *Service Engine Soon* light to illuminate. Examples are:

1. The vehicle has run out of fuel. (The engine may misfire or run poorly.)
2. Poor fuel quality or water in the fuel.
3. The fuel cap may not have been properly installed and securely tightened.

These temporary malfunctions can be corrected by filling the fuel tank with good quality fuel and/or properly installing and securely tightening the gas cap. After three driving cycles without these or any other temporary malfunctions present, the *Service Engine Soon* light should turn off. (A driving cycle consists of a cold engine startup followed by mixed city/highway driving.) No additional vehicle service is required.

If the *Service Engine Soon* light remains on, have your vehicle serviced at the first available opportunity.

Instrumentation

Light is blinking:

Engine misfire is occurring which could damage your catalytic converter. You should drive in a moderate fashion (avoid heavy acceleration and deceleration) and have your vehicle serviced at the first available opportunity.

Under engine misfire conditions, excessive exhaust temperatures could damage the catalytic converter, the fuel system, interior floor coverings or other vehicle components, possibly causing a fire.

O/D off

Illuminates when the Transmission Control Switch (TCS), refer to *Overdrive control* in the *Controls and Features* chapter, has been

O/D
OFF

pushed turning the transmission overdrive function OFF. When the light is on, the transmission does not operate in the overdrive, refer to the *Driving* chapter for transmission function and operation.

The light may also flash steadily if a transmission malfunction is detected. If the light does not come on when the Transmission Control Switch is depressed or if the light flashes steadily, have your vehicle serviced as soon as possible, damage to the transmission could occur.

Low washer fluid

Illuminates when the ignition is turned to ON and when the windshield washer fluid is low.

Safety belt warning chime

Chimes to remind you to fasten your safety belts.

For information on the safety belt warning chime, refer to the *Seating and safety restraints* chapter.

Key-in-ignition warning chime

Sounds when the key is left in the ignition in the OFF/LOCK or ACC position and the driver's door is opened.

Instrumentation

Headlamps on warning chime

Sounds when the headlamps or parking lamps are on, the ignition is off (and the key is not in the ignition) and the driver's door is opened.

GAUGES

Standard analog instrument cluster gauges

Optional electronic instrument cluster gauges

Tachometer

Indicates the engine speed in revolutions per minute.

Driving with your tachometer pointer continuously at the top of the scale may damage the engine.

Instrumentation

- Standard analog instrument cluster

- Optional electronic instrument cluster

Speedometer

Indicates the current vehicle speed.

- Standard analog instrument cluster

- Optional electronic instrument cluster

Instrumentation

Odometer

Registers the total kilometers (miles) of the vehicle.

- Standard analog instrument cluster
- Optional electronic instrument cluster

Refer to *Electronic Message Center* for information on how to switch the display from metric to English measurements.

Trip odometer

Registers the kilometers (miles) of individual journeys.

- Standard analog instrument cluster

To reset, depress the control.

- Optional electronic instrument cluster

Refer to *Electronic Message Center* for information on how to switch the display from Trip 1 and Trip 2 features on the electronic instrument cluster.

Fuel gauge

Displays approximately how much fuel is in the fuel tank (when the key is in the ON position). The fuel gauge may vary slightly when the vehicle is in motion. The ignition should be in the OFF position while the vehicle is being refueled. When the gauge first indicates empty, there is a small amount of reserve fuel in the tank. When refueling the vehicle from

Instrumentation

empty indication, the amount of fuel that can be added will be less than the advertised capacity due to the reserve fuel.

- Standard analog instrument cluster

- Optional electronic instrument cluster

Engine coolant temperature gauge

Indicates the temperature of the engine coolant. At normal operating temperature, the needle remains within the normal area (the area between the “H” and “C”). If it enters the red section, the engine is overheating. Stop the vehicle as soon as safely possible, switch off the ignition and let it cool. Refer to *Engine coolant* in the *Maintenance and care* chapter.

This gauge indicates the temperature of the engine coolant, not the coolant level. If the coolant is not at its proper level or mixture, the gauge indication will not be accurate.

Never remove the radiator cap while the engine is running or hot.

- Standard analog instrument cluster

Instrumentation

- Optional electronic instrument cluster

ELECTRONIC MESSAGE CENTER (IF EQUIPPED)

The electronic message center only works when the ignition is in the ON position.

The message center allows you to:

- display the outside temperature.
- change your gauges from english to metric units.
- monitor the instantaneous fuel economy.
- monitor the average fuel economy.
- see how many kilometers/miles you can drive before running out of fuel.

You can select different features for the message center to display by using the message center controls located to the left of the instrument panel.

Selectable features

SELECT

Press this control to select the following features:

Instrumentation

- OUTSIDE TEMP
- INST ECONOMY
- AVG ECONOMY
- TO EMPTY

RESET

Press this control to reset the average fuel economy calculation.

ENG/MET

Press this control to change your instrument cluster gauges from english to metric. To switch the Electronic Automatic Temperature Control (if equipped) display between Fahrenheit and Celsius, refer to *Temperature conversion* in the *Controls and Features* chapter.

TRIP/RST

Press this control to reset the trip 1 and 2 odometer (which ever is displayed).

OD/TRIP

Press this control to switch between the permanent odometer mileage and the trip 1 and 2 odometer mileage.

Message center functions

OUTSIDE TEMP

Press SELECT until the menu displays OUTSIDE TEMP. This will display the temperature of the air outside of your vehicle. The accurate temperature will be displayed after the vehicle has reached the outside temperature and is driven at speeds of 48 km/h (30 mph) or greater.

Instrumentation

INST ECONOMY

Press SELECT until the menu displays INST ECONOMY. This will display your fuel economy in liters/100 km or miles/gallon based on the type of traffic you are in.

Your vehicle must be moving to calculate instantaneous fuel economy. When your vehicle is not moving, this function shows 99.9 L/100km or 0.0 MILES/GAL. Instantaneous fuel economy cannot be reset.

AVG ECONOMY

Press SELECT until the menu displays AVG ECONOMY. This will display your average fuel economy in liters/100 km or miles/gallon.

If you calculate your average fuel economy by dividing liters of fuel used by 100 kilometers traveled (miles traveled by gallons used), your figure may be different than displayed for the following reasons:

- your vehicle was not perfectly level during fill-up
- differences in the automatic shut-off points on the fuel pumps at service stations
- rounding of the displayed values to the nearest 0.1 liter (gallon)

Checking your highway fuel economy using the electronic message center display

Use the following procedure will allow you to accurately monitor your actual highway fuel economy. This procedure requires the vehicle speed control system to be set to highway speeds and must be run only on suitable roadways where long distance speed control can be safely maintained.

You may notice gradual improvement in fuel economy over the course of your vehicle's break-in period (approximately 1 600 kilometers [1 000 miles]).

1. Set the speed control. Refer to *Speed control* in the *Controls and features* chapter.

Instrumentation

2. Select AVG ECONOMY.
3. Press the RESET control to clear the system memory.

- *Actual highway fuel economy is now displayed.* This current average measure will change as the speed control system changes the engine speed to maintain a constant vehicle speed. This is most noticeable in hilly environments.

4. Drive the vehicle at least 8 km (5 miles) with the speed control system engaged to display a stabilized average.
5. Record the highway fuel economy for future reference.

It is important to press the RESET control after setting the speed control to get accurate highway fuel economy readings.

TO EMPTY

Press SELECT until the menu displays TO EMPTY. This will display how many kilometers or miles you can drive until you run out of fuel.

To ensure accuracy, turn the ignition off when you fill the fuel tank.

When the engine is restarted, the message center will display the last setting selected.

Controls and features

PANEL DIMMER CONTROL

Use to adjust the brightness of the instrument panel.

- Push and hold top of control to brighten.
- Push and hold bottom of control to dim.

HEADLAMP CONTROL

Rotate the headlamp control clockwise to the first position to turn on the parking lamps. Rotate clockwise to the second position to also turn on the headlamps.

Push the control to turn on the interior lamps. Push control again to turn off the interior lamps.

Daytime running lamps (DRL) (if equipped)

Turns the headlamps on with a reduced output. To activate:

- the ignition must be in the ON position and
- the headlamp control is in the OFF or Parking lamps position.

Always remember to turn on your headlamps at dusk or during inclement weather. The Daytime Running Light (DRL) System does not activate your tail lamps and generally may not provide adequate lighting during these conditions. Failure to activate your headlamps under these conditions may result in a collision.

Controls and features

High beams

Push forward to activate.

Pull toward you to deactivate.

Flash to pass

Pull toward you to activate and release to deactivate.

AUTOLAMP CONTROL (IF EQUIPPED)

The autolamp system provides light sensitive automatic on-off control of the exterior lights normally controlled by the headlamp control.

The autolamp system also keeps the lights on for a preselected period of time after the ignition switch is turned to OFF.

- To turn autolamps on, rotate the headlamp control counter clockwise to one of the two settings. The AUTO 1 position has a preselected time lapse of approximately 25 seconds. The AUTO 2 position has a preselected time lapse of approximately 2½ minutes.
- To turn autolamps off, rotate the headlamp control clockwise to the OFF position.

Controls and features

CLIMATE CONTROL SYSTEM

Manual heating and air conditioning system

Fan speed control

Controls the volume of air circulated in the vehicle.

Temperature control

Controls the temperature of the airflow inside the vehicle.

Mode selector control

Controls the direction of the airflow to the inside of the vehicle.

A/C Control

Turns the A/C on in all modes when the outside temperature is about 4°C (40°F) or higher.

Controls and features

The air conditioning operates in MAX A/C and when the A/C control is depressed. However, the air conditioning will only function if the outside temperature is about 4°C (40°F) or higher.

Since the air conditioner removes considerable moisture from the air during operation, it is normal if clear water drips on the ground under the air conditioner drain while the system is working and even after you have stopped the vehicle.

Under normal conditions, your vehicle's climate control system should be left in any position other than MAX A/C or OFF when the vehicle is parked. This allows the vehicle to "breathe" through the outside air inlet duct.

- MAX A/C-Uses recirculated air to cool the vehicle. MAX A/C is noisier than A/C modes but more economical and will cool the inside of the vehicle faster. In this mode, the air conditioning will automatically engage if the outside temperature is about 4°C (40°F) or higher and the  A/C indicator will automatically light. Airflow will be from the instrument panel registers. This mode can also be used to prevent undesirable odors from entering the vehicle.
-  (Panel)-Distributes outside air through the instrument panel registers. Heating and air conditioning capabilities are provided in this mode. Push the  A/C control in order to cool the vehicle below the outside temperature.
- OFF-Outside air is shut out and the fan will not operate. For short periods of time only, use this mode to reduce undesirable odors from entering the vehicle.
-  (Panel and floor)-Distributes outside air through the instrument panel registers and the front and rear floor ducts. Heating and air conditioning capabilities are provided in this mode. Push the  A/C control in order to cool the vehicle below the outside temperature. For added customer comfort, when the temperature control knob is anywhere in between the full hot and full cold positions, the air distributed through the front and rear floor ducts will be slightly warmer than the air sent to the instrument panel registers.
-  (Floor)-Allows for maximum heating by distributing outside air through the front and rear floor ducts. Heating and air conditioning capabilities are provided in this mode. Push the  (A/C) control in order to cool the vehicle below the outside temperature.
-  (Floor and defrost)-Distributes outside air through the windshield defroster ducts and the front and rear floor ducts. Heating

Controls and features

and air conditioning capabilities are provided in this mode. For added customer comfort, when the temperature control knob is anywhere in between the full hot and full cold positions, the air distributed through the front and rear floor ducts will be slightly warmer than the air sent to the windshield defroster ducts. If the outside temperature is about 4°C (40°F) or higher, the air conditioner will automatically dehumidify the air to reduce fogging.

-  (Defrost)-Distributes outside air through the windshield defroster ducts. It can be used to clear ice or fog from the windshield. If the outside temperature is about 4°C (40°F) or higher, the air conditioner will automatically dehumidify the air to reduce fogging. However, the indicator will not light unless the A/C control is selected.

Cooling your vehicle with outside air

Cooling your vehicle with air conditioned outside air is quieter but less economical than using air conditioned recirculated air. It also has less cooling capacity and is not recommended for high outside temperatures.

In order to cool your vehicle using outside air:

1. Turn the mode selector to  (panel),  (panel and floor) or  (floor).
2. Press the  (A/C) selector. The indicator light on the A/C selector will illuminate.
3. Turn the temperature control knob counterclockwise to COOL.
4. Turn the fan speed control to the position of your choice.

During periods of high humidity, vapor may be emitted from the air outlets when using the A/C system with outside air. This can be corrected by using MAX A/C to cool the vehicle.

Controls and features

Rear seat heating

Rear seat heating is provided through the floor ducts located under the front seats. Airflow and temperature to the rear seating are regulated by the main climate control system.

The rear passenger compartment air conditioning system (if equipped) should be set to OFF, if rear heating is desired.

Operating tips

- In humid weather, select  before driving. This will reduce fogging on your windshield. After a few minutes, select any desired position.
- To reduce humidity buildup inside the vehicle, don't drive with the climate control system in the OFF position.
- Don't put objects under the front seat that will interfere with the airflow to the second row seat floor ducts.

Controls and features

- Remove any snow, ice or leaves from the air intake area (at the bottom of the windshield under the hood).

- If your vehicle has been parked with the windows closed during hot weather, the air conditioner will do a much faster job of cooling if you drive for two or three minutes with the windows open. This will force most of the hot, stale air out of the vehicle. Then operate your air conditioner as you would normally.
- When placing objects on top of your instrument panel, be careful to not place them over the defroster outlets. These objects can block airflow and reduce your ability to see through your windshield. Also, avoid placing small objects on top of your instrument panel. These objects can fall down into the defroster outlets and block airflow and possibly damage your climate control system.
- If the air conditioner works well in MAX A/C, but not in any other mode when the A/C control is selected, this may indicate that the odor and particulate air filter (if equipped) needs to be replaced.

Do not place objects on top of the instrument panel, as these objects may become projectiles in a collision or sudden stop.

Rear passenger compartment air conditioning system (if equipped)

This system allows the rear seat occupants to adjust their air conditioning comfort level.

Controls and features

The rear A/C fan speed control allows the rear passengers to control the volume of air that is distributed from the rear registers.

The rear seat A/C system is controlled from the main climate control system on the instrument panel.

Controls and features

Turning the Rear A/C on

1. Set the main climate control rear fan control to Rear A/C, set the mode selector in any position (other than OFF), and depress the A/C control.
2. Set the fan speed on the Rear A/C fan control to a number between 1–4.

Front seat air flow regulation of the rear fan

Set the main climate control rear fan control to a number between 1–4. This numerical setting will take control of the airflow from the rear A/C fan control.

Controls and features

Turning the Rear A/C off:

To turn the Rear A/C off, turn the Rear Fan Control on the main climate control system to OFF, or

turn the Rear Fan Control on the main climate control system to Rear A/C and turn the Rear A/C Fan Control to 0.

For maximum cooling for the front seat passengers, set the rear fan switch to the OFF (0) position.

Please note that the rear passenger air conditioning system is designed for air conditioning purposes only, and does not heat the rear compartment. Rear compartment heating is provided by the underseat floor ducts. Refer to Rear Seat Heating.

Controls and features

Electronic Automatic Temperature Control (EATC) system (if equipped)

The EATC system will maintain a selected temperature and automatically control airflow. You can override automatic operation with any of the override controls or the fan speed control.

Turning the EATC on

Press AUTOMATIC, any of the override controls or the fan speed control. The EATC will only operate when the engine is running.

Controls and features

Turning the EATC off

Press OFF.

Automatic operation

Press AUTOMATIC and select the desired temperature. The selected temperature and the word AUTO will appear in the display window. The EATC system will either heat or cool to achieve the selected temperature. The system will automatically determine fan speed, airflow location and if outside air or recirculated air is required. Fan speed remains automatic unless the fan speed control is turned.

When in AUTOMATIC and weather conditions require heat, air will be sent to the front and rear floor ducts. However, if the engine is not warm enough to provide heat, the fan will be at a low speed and the air will be directed to the windshield. In 3½ minutes or less, the fan speed will start to increase and the airflow location will change to the front and rear floor area.

If unusual conditions exist (i.e. window fogging, etc.), the manual override controls allow you to adjust the mode selector and fan speed controls as necessary.

Temperature selection

The display window indicates the selected temperature, function (AUTO or one of the override controls) and manual control of fan speed (☼) if automatic fan speed is not desired.

Controls and features

To control the temperature, select any temperature between 15°C (60°F) and 32°C (90°F) by pressing the temperature controls.

For continuous maximum cooling, push the temperature control until 15°C (60°F) is shown in the display window. The EATC will continue maximum cooling (disregarding the displayed temperature) until a warmer temperature is selected by pressing the temperature controls.

For continuous maximum heating, push the temperature controls until 32°C (90°F) is shown in the display window. The EATC will continue maximum heating (disregarding the displayed temperature) until a cooler temperature is selected by pressing the temperature control.

Temperature conversion

Press the  (A/C) and  (DEF) simultaneously for one second while rotating the fan speed dial upward until it stops moving, to switch between Fahrenheit and Celsius.

Controls and features

Fan speed (🌀)

When AUTOMATIC is pressed, fan speed is adjusted automatically for existing conditions. You can override fan speed at any time. To control fan speed manually, use the thumbwheel to cancel automatic fan speed operation. Rotate the thumbwheel up for higher fan speed or down for lower fan speed.

The display will show 🌀 to indicate manual fan operation.

To return to automatic fan operation, press AUTOMATIC.

Manual override controls

The override controls allow you to:

- manually control where the airflow is directed
- manually control the air conditioning operation
- manually select between outside or recirculated air during air conditioning operation

The air conditioning can operate in all modes except OFF. It will also operate only when required when AUTOMATIC has been selected. However, the air conditioning will only function if the outside temperature is about 4°C (40°F) or higher.

Controls and features

Since the air conditioner removes considerable moisture from the air during operation, it is normal if clear water drips on the ground under the air conditioner drain while the system is working and even after you have stopped the vehicle.

Under normal conditions, your vehicle's climate control system should be left in any position other than MAX or OFF when the vehicle is parked. This allows the vehicle to "breathe" through the outside air inlet duct. Prior to turning off the ignition, in snowy or dirty conditions, ensure that the climate control system is turned OFF.

- OFF-Outside air is shut out and the fan will not operate. For short periods of time only, use this mode to reduce undesirable odors from entering the vehicle.
-  (Floor and defrost)-Distributes outside air through the windshield defroster ducts and the front and rear floor ducts. Heating and air conditioning capabilities are provided in this mode. For added customer comfort, when the temperature control knob is anywhere in between the full hot and full cold positions, the air distributed through the front and rear floor ducts will be slightly warmer than the air sent to the windshield defroster ducts.
-  (Defrost)-Distributes outside air through the windshield defroster ducts. It can be used to clear ice or fog from the windshield. If the temperature is about 4°C (40°F) or higher, the air conditioner will automatically dehumidify the air to reduce fogging.
-  (Panel)-Distributes outside air through the instrument panel registers. Heating and air conditioning capabilities are provided in this mode. Push the  (A/C) control in order to cool the vehicle below the outside temperature.
-  (Panel and floor)-Distributes outside air through the instrument panel registers and the front and rear floor ducts. Heating and air conditioning capabilities are provided in this mode. Push the  (A/C) control in order to cool the vehicle below the outside temperature. For added customer comfort, when the temperature control is anywhere in between the full hot and full cold, the air distributed through the front and rear floor ducts will be slightly warmer than the air sent to the instrument panel registers.
-  (Floor)-Allows for maximum heating by distributing outside air through the front and rear floor ducts. Heating and air conditioning capabilities are provided in this mode. Push the  (A/C) control in order to cool the vehicle below the outside temperature.

Controls and features

- MAX A/C-Uses recirculated air to cool the vehicle. MAX A/C is noisier than  A/C but more economical and will cool the inside of the vehicle faster. After pressing the MAX control, both the MAX and  A/C indicators will light and the airflow will be from the instrument panel registers. In this mode, the air conditioning will automatically engage if the outside temperature is about 4°C (40°F) or higher.

Cooling your vehicle with outside air using override controls

Cooling your vehicle with air conditioned outside air using just the A/C override control is quieter but less economical than using both the A/C and the MAX control. It also has less cooling capacity and is not recommended for high outside temperatures.

In order to cool your vehicle with outside air using the override controls:

1. Select the override control  (panel),  (panel and floor) or  (floor).
2. Press the  (A/C) control. The indicator light on the  (A/C) control will illuminate.
3. Select the desired temperature for your comfort level.
4. Adjust the fan speed override knob to the position of your choice.

During periods of high humidity, vapor may be emitted from the air outlets when using the A/C system with outside air. This can be corrected by using MAX A/C to cool the vehicle.

Controls and features

Rear seat heating

Rear seat heating is provided through the floor ducts located under the front seats. Airflow and temperature to the rear seating are regulated by the main climate control system.

The rear passenger compartment air conditioning system (if equipped) should be set to OFF, if rear heating is desired.

Operating tips

- In humid weather, select  (Defrost) before driving. This will reduce fogging on your windshield. After a few minutes, select any desired position.
- To reduce humidity buildup inside the vehicle, don't drive with the climate control system in the OFF position.
- Don't put objects under the front seat that will interfere with the airflow to the second row seat floor ducts.

Controls and features

- Remove any snow, ice or leaves from the air intake area (at the bottom of the windshield).

- If your vehicle has been parked with the windows closed during hot weather, the air conditioner will do a much faster job of cooling if you drive for two or three minutes with the windows open. This will force most of the hot, stale air out of the vehicle. Then operate the air conditioner as you would normally.
- When placing objects on top of your instrument panel, be careful to not place them over the defroster outlets. These objects can block airflow and reduce your ability to see through your windshield. Also, avoid placing small objects on top of your instrument panel. These objects can fall down into the defroster outlets and block airflow and possibly damage your climate control system.
- If the air conditioner works well in MAX A/C, but not in any other mode when the A/C control is selected, this may indicate that the passenger compartment odor and particulate air filter (if equipped) needs to be replaced.

Do not place objects on top of the instrument panel, as these objects may become projectiles in a collision or sudden stop.

Rear passenger air conditioning system — EATC systems

On vehicles equipped with front passenger EATC systems, the vehicle will also have rear passenger compartment climate controls, which allow the rear seat occupants to adjust their air conditioning level.

Controls and features

The rear A/C fan speed control allows rear passengers to control the volume of air that is distributed from the rear registers.

The rear A/C system is controlled from the main climate control system on the instrument panel.

The rear seat A/C system is controlled from the main climate control system on the instrument panel.

Controls and features

Turning the Rear A/C on

1. Set the main climate control rear fan control to Rear A/C, set the mode selector in any position (other than OFF), and depress the A/C control.
2. Set the fan speed on the Rear A/C fan control to a number between 1–4.

Front seat air flow regulation of the rear fan

Set the main climate control rear fan control to a number between 1–4. This numerical setting will take control of the airflow from the rear A/C fan control.

Turning the Rear A/C off:

To turn the Rear A/C off, turn the Rear Fan Control on the main climate control system to OFF, or

Controls and features

turn the Rear Fan Control on the main climate control system to Rear A/C and turn the Rear A/C Fan Control to 0.

For maximum cooling for the front seat passengers, set the rear fan switch to the OFF (0) position.

Please note that the rear passenger air conditioning system is designed for air conditioning purposes only, and does not heat the rear compartment. Rear compartment heating is provided by the underseat ducts. Refer to Rear Seat Heating.

REAR WINDOW DEFROSTER

The rear defroster control is located on the instrument panel.

Press the rear defroster control to clear the rear window of thin ice and fog.

- The small LED will illuminate when the rear defroster is activated.

Controls and features

The ignition must be in the ON position to operate the rear window defroster.

The defroster turns off automatically after 15 minutes or when the ignition is turned to the OFF position. To manually turn off the defroster before 15 minutes have passed, push the control again.

USING YOUR AUDIO SYSTEM

AM/FM Stereo/Cassette (CD changer compatible)

Volume/power control

Press the control to turn the audio system on or off.

VOL - PUSH ON

Controls and features

Turn the control to raise or lower volume.

If the volume is set above a certain level and the ignition is turned off, the volume will come back on at a “nominal” listening level when the ignition switch is turned back on.

AM/FM select

The AM/FM select control works in radio, tape and CD changer modes (if equipped).

AM/FM select in radio mode

This control allows you to select AM or FM frequency bands. Press the control to switch between AM, FM1 or FM2 memory preset stations.

AM/FM select in tape mode

Press this control to stop tape play and begin radio play.

AM/FM select in CD changer mode (if equipped)

Press this control to stop CD play and begin radio play.

Tune adjust

The tune control works in radio and CD changer modes (if equipped).

Controls and features

Tune adjust in radio mode

- Press ◀ to move to the next frequency down the band (whether or not a listenable station is located there). Hold the control to move through the frequencies quickly.

- Press ▶ to move to the next frequency up the band (whether or not a listenable station is located there). Hold for quick movement.

Tune adjust for CD changer (if equipped)

- Press ◀ to select the previous disc in the CD changer. (Play will begin on the first track of the disc unless the CD changer is in shuffle mode. Refer to *Shuffle feature* for more information. Hold the control to continue reversing through the disc.
- Press ▶ to select the next disc in the CD changer. Hold the control to fast-forward through the remaining discs.

Seek function

The seek function control works in radio or CD changer mode.

Seek function in radio mode

- Press ◀ to find the next listenable station down the frequency band.
- Press ▶ to find the next listenable station up the frequency band.

Seek function for CD changer (if equipped)

- Press ◀ to seek to the previous track of the current disc. If a selection has been playing for three seconds or more and you press ◀, the CD changer will replay that selection from the beginning.

Controls and features

- Press  to seek forward to the next track of the current disc. After the last track has been completed, the first track of the current disc will automatically replay.

Scan function

The scan function works in radio or CD changer mode (if equipped).

Scan function in radio mode

Press the SCAN control to hear a brief sampling of all listenable stations on the frequency band. Press the SCAN control again to stop the scan mode.

Scan function in CD changer mode (if equipped)

Press the SCAN control to hear a brief sampling of all selections on the CD. (The CD scans in a forward direction, wrapping back to the first track at the end of the CD.) To stop on a particular selection, press the SCAN control again.

Radio station memory preset

The radio is equipped with six station memory preset controls. These controls can be used to select up to six preset AM stations and twelve FM stations (six in FM1 and six in FM2).

Setting memory preset stations

1. Select the frequency band with the AM/FM select control.
2. Select a station. Refer to *Tune adjust* or *Seek function* for more information on selecting a station.
3. Press and hold a memory preset control until the sound returns, indicating the station is held in memory on the control you selected.

Controls and features

Bass adjust

The bass adjust control allows you to increase or decrease the audio system's bass output.

Treble adjust

The treble adjust control allows you to increase or decrease the audio system's treble output.

Speaker balance adjust

Speaker sound distribution can be adjusted between the right and left speakers.

Speaker fade adjust

Speaker sound can be adjusted between the front and rear speakers.

Controls and features

Tape select

- To enter tape mode while in radio or CD changer mode, press the TAPE control.
- If no tape is found, NO TAPE appears in the display.

Automatic Music Search

The Automatic Music Search feature allows you to quickly locate the beginning of the tape selection being played or to skip to the next selection.

To activate the feature, momentarily depress the TAPE AMS button.

Then, press either REW (for the beginning of the current selection) or FF (to advance to the next selection). The tape deck stops and returns to play mode when the AMS circuit senses a blank section on the tape.

In order to ensure proper operation of the AMS feature, the tape **MUST** have a blank section of at least 4 seconds duration between programs.

CD changer select (if equipped)

- To enter CD changer mode while in radio or tape mode, press the CD control.

Rewind

The rewind control works in tape and CD changer (if equipped) modes.

To rewind in tape mode, press the SIDE/REW control.

Controls and features

Press the 1-2/FF control to stop rewinding the tape.

To rewind in CD changer mode, press the CD control (preset 1).

Press the control again to deactivate rewind mode.

Fast forward

The fast forward control works in tape and CD changer modes.

To fast forward in tape mode, press the 1-2/FF control.

Tape direction will automatically reverse when the end of the tape is reached.

Press the SIDE/REW control to stop the fast forward of the tape.

To fast forward in CD changer mode, press the CD control (preset 2).

Press the control again to deactivate fast forward mode.

Compression feature (if equipped)

Compression adjust brings soft and loud CD passages together for a more consistent listening level.

Press the COMP control to activate and deactivate compression adjust.

Shuffle feature (if equipped)

The shuffle feature operates in CD changer mode and plays all tracks on the current disc in random order.

Controls and features

The shuffle feature continues to the next disc after all tracks are played. Press the SHUFFLE control to start this feature. Random order play will continue until the SHUFFLE control is pressed again.

Tape direction select

Press SIDE and 1-2 at the same time to play the alternate side of a tape.

Eject function

Press the control to stop and eject a tape.

Dolby® noise reduction

Dolby® noise reduction operates only in tape mode. Dolby® reduces the amount of hiss and static during tape playback.

Press the  control to activate (and deactivate) Dolby® noise reduction.

The noise reduction system is manufactured under license from Dolby Laboratories Licensing Corporation.

Setting the clock

Press CLK to toggle between listening frequencies and clock mode while in radio mode.

To set the hour, press and hold the CLK control and press the SEEK control:

Controls and features

- ◀ to decrease hours and
- ▶ to increase hours.

To set the minute, press and hold the CLK control and press the TUNE control:

- ◀ to decrease minutes and
- ▶ to increase minutes.

The CLK control will allow you to switch between media display mode (radio station, stereo information, etc.) and clock display mode (time). When in clock mode, the media information will display for ten seconds, when the radio is turned on, and then revert to clock information. Anytime that the media is changed, (new radio station, etc.), the media information will again display for ten seconds before reverting back to the clock. In media mode, the media information will always be displayed.

Controls and features

Rear seat controls (if equipped)

The Rear Seat Controls (RSC) allow the rear seat passengers to operate the radio, tape, or CD changer (if equipped).

To turn on the rear seat controls, press the memory preset controls 3 and 5 at the same time. The  will appear in the radio display.

Pressing 3 and 5 at the same time again will turn the rear seat controls off.

Adjusting the volume

Press the + control to increase volume.

Press the — control to decrease volume.

From the RSC, the loud speaker volume can not be set higher than the current volume radio setting. Once in headphone mode, the RSC volume controls will only change volume in the headphones to a desired level (muting the speakers will not mute the headphones).

Turning the speakers on and off

Press the control to turn all speakers on or off.

Controls and features

Using headphones

Plug a 3.6 mm headphone (not included) into either one of the two  jacks. Press the  /  control to operate the headphones.

The speakers will cut out once the speaker on/off control is pressed. Press the  /  control again to deactivate headphones.

Media select

Push the MEDIA control to toggle between AM, FM1, FM2, tape, or CD changer (if equipped).

Memory preset control

Push the MEM control successively to allow rear seat passengers to scroll through the 6 memory presets in AM, FM1, or FM2.

Push the MEM control in CD changer mode (if equipped) to advance to the next disc.

Seek function

- Press  to find the next listenable station down the frequency band.
- Press  to find the next listenable station up the frequency band.

In CD changer mode (if equipped), use the SEEK function to access the next  or previous  selection.

In tape mode, use the SEEK function to access the next  or previous  selection.

Controls and features

Premium AM/FM Cassette (CD changer compatible)

Your audio system is equipped with selective lighting, a unique lighting strategy. This lighting feature is operable when the headlamps are illuminated. During the operation of any selected mode, lighting for the individual function controls will either illuminate or turn off. Those controls which have a function for the specific mode of operation selected will be lit, while the controls which have no function for that mode will be turned off.

Volume/power control

Press the control to turn the audio system on or off.

Controls and features

Turn the control to raise or lower volume.

If the volume is set above a certain level and the ignition is turned off, the volume will come back on at a “nominal” listening level when the ignition switch is turned back on.

AM/FM select

The AM/FM select control works in radio, tape and CD changer modes (if equipped).

AM/FM select in radio mode

This control allows you to select AM or FM frequency bands. Press the control to switch between AM, FM1 or FM2 memory preset stations.

AM/FM select in tape mode

Press this control to stop tape play and begin radio play.

AM/FM select in CD changer mode (if equipped)

Press this control to stop CD play and begin radio play.

Tune adjust

The tune control works in radio or CD changer mode.

Tune adjust in radio mode

- Press ◀ to move to the next frequency down the band (whether or not a listenable station is located there). Hold the control to move through the frequencies quickly.
- Press ▶ to move to the next frequency up the band (whether or not a listenable station is located there). Hold for quick movement.

Tune adjust for CD changer

- Press ◀ to select the previous disc in the CD changer. (Play will begin on the first track of the

Controls and features

disc unless the CD changer is in shuffle mode.) Refer to *Shuffle feature* for more information. Hold the control to continue reversing through the disc.

- Press ► to select the next disc in the CD changer. Hold the control to fast-forward through the remaining discs.

Seek function

The seek function control works in radio, tape or CD changer mode (if equipped).

Seek function in radio mode

- Press ◀ to find the next listenable station down the frequency band.
- Press ► to find the next listenable station up the frequency band.

Seek function in tape mode

- Press ◀ to listen to the previous selection on the tape or return to the beginning of the current selection.
- Press ► to listen to the next selection on the tape.

Seek function for CD changer (if equipped)

- Press ◀ to seek to the previous track of the current disc. If a selection has been playing for three seconds or more and you press ◀, the CD changer will replay that selection from the beginning.
- Press ► to seek forward to the next track of the current disc. After the last track has been completed, the first track of the current disc will automatically replay.

Scan function

The scan function works in radio, tape or CD changer mode (if equipped).

Controls and features

Scan function in radio mode

Press the SCAN control to hear a brief sampling of all listenable stations on the frequency band. Press the SCAN control again to stop the scan mode.

Scan function in tape mode

Press the SCAN control to hear a short sampling of all selections on the tape. (The tape scans in a forward direction. At the end of the tape's first side, direction automatically reverses to the opposite side of the tape.) To stop on a particular selection, press the control again.

Scan function in CD changer mode (if equipped)

Press the SCAN control to hear a short sampling of all selections on the CD (The CD scans in a forward direction, wrapping back to the first track at the end of the CD.). To stop on a particular selection, press the control again.

Radio station memory preset

The radio is equipped with six station memory preset controls. These controls can be used to select up to six preset AM stations and twelve FM stations (six in FM1 and six in FM2).

Setting memory preset stations

1. Select the frequency band with the AM/FM select control.
2. Select a station. Refer to *Tune adjust* or *Seek function* for more information on selecting a station.
3. Press and hold a memory preset control until the sound returns, indicating the station is held in memory on the control you selected.

Autoset memory preset

Autoset allows you to set strong radio stations without losing your original manually set preset stations. This feature is helpful on trips when you travel between cities with different radio stations.

Controls and features

Starting autose memory preset

1. Select a frequency using the AM/FM select controls.
2. Press the AUTO control.
3. When the first six strong stations are filled, the station stored in memory preset control 1 will start playing.

If there are less than six strong stations available on the frequency band, the remaining memory preset controls will all store the last strong station available.

To deactivate autose and return to your audio system's manually set memory stations, press the AUTO control again.

Bass adjust

The bass adjust control allows you to increase or decrease the audio system's bass output.

Treble adjust

The treble adjust control allows you to increase or decrease the audio system's treble output.

Speaker balance adjust

Speaker sound distribution can be adjusted between the right and left speakers.

Controls and features

Speaker fade adjust

Speaker sound can be adjusted between the front and rear speakers.

Tape/CD changer mode select (if equipped)

- To begin tape play (with a tape loaded into the audio system) while in the radio or CD changer mode, press the TAPE control. Press the button during rewind or fast forward to stop the rewind or fast forward function and begin play.
- To begin CD play (if CD[s] are loaded), press the CD control. The first track of the disc will begin playing. After that, CD play will begin where it stopped last.

Rewind

The rewind control works in tape and CD changer modes (if equipped).

- In tape mode, radio play will continue until rewind is stopped (with the TAPE or FF control) or the beginning of the tape is reached.
- In CD changer mode, pressing the REW control for less than three seconds results in slow rewind. Pressing the control for more than three seconds results in fast rewind.

Fast forward

The fast forward control works in tape and CD changer modes (if equipped).

- In the tape mode, tape direction will automatically reverse when the end of the tape is reached.

Controls and features

- In CD changer mode, pressing the control for less than three seconds results in slow forward action. Pressing the control for more than three seconds results in fast forward action.

Tape direction select

Press SIDE 1-2 to play the alternate side of a tape.

Eject function

Press the control to stop and eject a tape.

Dolby® noise reduction

Dolby® noise reduction operates only in tape mode. Dolby® reduces the amount of hiss and static during tape playback.

Press the  control to activate (and deactivate) Dolby® noise reduction.

The noise reduction system is manufactured under license from Dolby Laboratories Licensing Corporation.

Compression feature (if equipped)

Compression adjust brings soft and loud CD passages together for a more consistent listening level.

Press the COMP control to activate and deactivate compression adjust.

Shuffle feature (if equipped)

The shuffle feature operates in CD changer mode and plays all tracks on the current disc in random order. The shuffle feature continues to the next disc after all tracks are played.

Controls and features

Press the SHUFFLE control to start this feature. Random order play will continue until the SHUFFLE control is pressed again.

Radio Data System (RDS) feature

When selected, the RDS (Radio Data System) function performs the following:

- Displays the radio station call letters
- Displays the type of music format (jazz, country, rock)
- Searches for a particular type of music format by selecting the SEEK control
- Allows traffic information broadcasts to be turned on and off with the SEL control

Press the RDS/CLK control until RDS OFF is displayed.

- Use the SEL control to select ON or OFF.

Traffic

- Press the RDS control until TRAFFIC is displayed.
- Use the SEL control to select ON or OFF. With the feature on, use the SEEK or SCAN control to find a radio station broadcasting a traffic report (if it is broadcasting RDS data).

Program type

- Press the RDS control until FIND program type is displayed.

Controls and features

- Use the SEL control to select the program type. With the feature on, use the SEEK or SCAN control to find the desired program type from the following selections:

- Classic
- Country
- Info
- Jazz
- Oldies
- R & B
- Religious
- Rock
- Soft
- Top 40

Show

- With RDS activated, press the RDS control until SHOW is displayed.
- Use the SEL control to select the program TYPE, station NAME or NONE (no text displayed).

RDS clock feature

Refer to *Setting the clock* for information.

Setting the clock

Press the CLOCK control until CLOCK HOUR or CLOCK MINUTE is displayed.

Controls and features

Use the SEL control to manually set the time.

- Press ▲ to increase hours/minutes.
- Press ▼ to decrease hours/minutes.

Mute mode

Press the control to mute the

playing media. Press the control again to return to the playing media.

Rear seat controls (if equipped)

The Rear Seat Controls (RSC) allow the rear seat passengers to operate the radio, tape, or CD changer (if equipped).

To turn on the rear seat controls, press the memory preset controls 3 and 5 at the same time. The  will appear in the radio display.

Pressing 3 and 5 at the same time again will turn the rear seat controls off.

Controls and features

Adjusting the volume

Press the + control to increase volume.

Press the — control to decrease volume.

From the RSC, the speaker volume can not be set higher than the current volume radio setting. Once in headphone mode, the RSC volume controls will only change volume in the headphones to a desired level (muting the speakers will not mute the headphones).

Turning the speakers on and off

Press the control to turn all speakers on or off.

Using headphones

Plug a 3.6 mm headphone (not included) into either one of the two  jacks. Press the  control to operate the headphones.

The speakers will cut out once the speaker on/off control is pressed. Press the  control again to deactivate headphones.

Media select

Push the MEDIA control to toggle between AM, FM1, FM2, tape, or CD changer (if equipped).

Controls and features

Memory preset control

Push the MEM control successively to allow rear seat passengers to scroll through the 6 memory presets in AM, FM1, or FM2.

Push the MEM control in CD changer mode (if equipped) to advance to the next disc.

Seek function

- Press ◀ to find the next listenable station down the frequency band.
- Press ▶ to find the next listenable station up the frequency band.

In CD changer mode (if equipped), use the SEEK function to access the next ▶ or previous ◀ selection.

In tape mode, use the SEEK function to access the next ▶ or previous ◀ selection.

Super Sound AM/FM Stereo/Cassette/Single CD Player (CD Changer Compatible)

Controls and features

Your audio system is equipped with selective lighting, a unique lighting strategy. This lighting feature is operable when the headlamps are illuminated. During the operation of any selected mode, lighting for the individual function controls will either illuminate or turn off. Those controls which have a function for the specific mode of operation selected will be lit, while the controls which have no function for that mode will be turned off.

Volume/power control

Press the control to turn the audio system on or off.

VOL - PUSH ON

Turn control to raise or lower volume.

VOL - PUSH ON

If the volume is set above a certain level and the ignition is turned off, the volume will come back on at a “nominal” listening level when the ignition switch is turned back on. If you wish to maintain your preset volume level, turn the audio system off with the power control before switching off the ignition.

AM/FM select

The AM/FM select control works in radio, tape and CD modes.

Controls and features

AM/FM select in radio mode

This control allows you to select AM or FM frequency bands. Press the control to switch between AM, FM1 or FM2 memory preset stations.

AM/FM select in tape mode

Press this control to stop tape play and begin radio play.

AM/FM select in CD mode

Press this control to stop CD play and begin radio play.

Tune adjust

The tune control works in radio or CD mode.

Tune adjust in radio mode

- Press ◀ to move to the next frequency down the band (whether or not a listenable station is located there). Hold the control to move through the frequencies quickly.
- Press ▶ to move to the next frequency up the band (whether or not a listenable station is located there). Hold for quick movement.

Tune adjust for CD changer (if equipped)

- Press ◀ to select the previous disc in the CD changer. (Play will begin on the first track of the disc unless the CD changer is in shuffle mode. Refer to *Shuffle feature* for more information. Hold the control to continue reversing through the disc.
- Press ▶ to select the next disc in the CD changer. Hold the control to fast-forward through the remaining discs.

Seek function

The seek function control works in radio, tape or CD mode.

Controls and features

Seek function in radio mode

- Press ◀ to find the next listenable station down the frequency band.
- Press ▶ to find the next listenable station up the frequency band.

Seek function in tape mode

- Press ◀ to listen to the previous selection on the tape.
- Press ▶ to listen to the next selection on the tape.

Seek function for CD changer (if equipped)

- Press ◀ to seek to the previous track of the current disc. If a selection has been playing for three seconds or more and you press ◀, the CD changer will replay that selection from the beginning.
- Press ▶ to seek forward to the next track of the current disc. After the last track has been completed, the first track of the current disc will automatically replay.

Scan function

The scan function works in radio, tape or CD mode.

Scan function in radio mode

Press the SCAN control to hear a brief sampling of all listenable stations on the frequency band. Press the control again to stop the scan mode.

Controls and features

Scan function in tape mode

Press the SCAN control to hear a short sampling of all selections on the tape. (The tape scans in a forward direction. At the end of the tape's first side, direction automatically reverses to the opposite side of the tape.) To stop on a particular selection, press the control again.

Scan function in CD mode

Press the SCAN control to hear a short sampling of all selections on the CD. (The CD scans in a forward direction, wrapping back to the first track at the end of the CD.) To stop on a particular selection, press the control again.

Radio station memory preset

The radio is equipped with six station memory preset controls. These controls can be used to select up to six preset AM stations and twelve FM stations (six in FM1 and six in FM2).

Setting memory preset stations

1. Select the frequency band with the AM/FM select control.
2. Select a station. Refer to *Tune adjust* or *Seek function* for more information on selecting a station.
3. Press and hold a memory preset control until the sound returns, indicating the station is held in memory on the control you selected.

Autoset memory preset

Autoset allows you to set strong radio stations without losing your original manually set preset stations. This feature is helpful on trips when you travel between cities with different radio stations.

Controls and features

Starting autaset memory preset

1. Select a frequency using the AM/FM select controls.
2. Press the AUTO control.
3. When the first six strong stations are filled, the station stored in memory preset control 1 will start playing.

If there are less than six strong stations available on the frequency band, the remaining memory preset controls will all store the last strong station available.

To deactivate autaset and return to your audio system's manually set memory stations, press the AUTO control again.

Bass adjust

The bass adjust control allows you to increase or decrease the audio system's bass output.

Press the BASS control then press:

- ◀ to decrease bass output and
- ▶ to increase bass output.

Treble adjust

The treble adjust control allows you to increase or decrease the audio system's treble output.

Press the TREB control then press:

Controls and features

- ◀ to decrease treble output and
- ▶ to increase treble output.

Speaker balance adjust

Speaker sound distribution can be adjusted between the right and left speakers.

Press the BAL control then press:

- ◀ to shift sound to the left and
- ▶ to shift sound to the right.

Speaker fade adjust

Speaker sound can be adjusted between the front and rear speakers.

Press the FADE control then press:

- ▶ to shift sound to the front and
- ◀ to shift sound to the rear.

Controls and features

Tape/CD/CD changer (if equipped) select

- To begin tape play (with a tape loaded into the audio system) while in the radio or CD mode, press the TAPE control. Press the button during rewind or fast forward to stop the rewind or fast forward function.
- To begin CD play (if CD(s) are loaded), press the CD control. The first track of the disc will begin playing. After that CD play will begin where it stopped last.

If equipped with a CD changer, press the CD control to toggle between single CD and CD changer play.

Rewind

The rewind control works in tape and CD modes.

- In tape mode, radio play will continue until rewind is stopped (with the TAPE control) or the beginning of the tape is reached.
- In CD mode, pressing the REW control for less than three seconds results in slow rewind. Pressing the control for more than three seconds results in fast rewind.

Fast forward

The fast forward control works in tape and CD modes.

- In the tape mode, tape direction will automatically reverse when the end of the tape is reached.
- In CD mode, pressing the control for less than three seconds results in slow forward action. Pressing the control for more than three seconds results in fast forward action.

Controls and features

Tape direction select

Press SIDE 1-2 to play the alternate side of a tape.

Eject function

Press the control to stop and eject a tape.

Press the control to stop and eject a CD.

Dolby noise reduction

Dolby noise reduction reduces the amount of hiss and static during tape playback. Press the control to activate (and deactivate) the noise reduction.

Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation. “Dolby” and the double-D symbol  are trademarks of Dolby Laboratories Licensing Corporation.

Compression adjust

Compression adjust brings soft and loud CD passages together for a more consistent listening level.

Press the COMP control to activate and deactivate compression adjust.

Shuffle feature

The shuffle feature operates in CD mode and plays all tracks on the current disc in random order. If equipped with the CD changer, the shuffle feature continues to the next disc after all tracks on the current disc are played.

Press the SHUFFLE control to start this feature. Random order play will continue until the SHUFFLE control is pressed again.

Controls and features

Setting the clock

Press the RDS/CLK control until SELECT HOUR is displayed and press:

- ◀ to decrease hours and
- ▶ to increase hours.

To set the minute, press the RDS/CLK control until SELECT MIN is displayed and press:

- ◀ to decrease minutes and
- ▶ to increase minutes.

Radio Data System (RDS) feature

When selected, the RDS (Radio Data System) function performs the following:

- Displays the radio station call letters
- Displays the type of music format (jazz, country, rock)
- Searches for a particular type of music format by selecting the SEEK control
- Allows traffic information broadcasts to be turned on and off with the SEL control

Controls and features

Press the RDS control. Use the SEL control to select ON or OFF to enable or disable the feature.

RDS traffic announcement

When set ON, this traffic feature will interrupt tape or CD play to play a traffic report broadcast from a FM RDS station.

To activate the traffic feature:

- Press the RDS control until TRAFFIC is displayed.

To see if any stations in your area are capable of broadcasting an RDS traffic alert, press SCAN or SEEK while TRAFFIC ON is displayed. The radio will then SCAN or SEEK only to traffic capable stations.

RDS select program type

- Press the RDS control until FIND program type is displayed.

- Use the SEL control to select the desired program type. With the feature ON (FIND program type), press the SEEK, AUTOSET, or SCAN control to find only stations of the selected type from the following selections:

- Classic
- Country
- Info

Controls and features

- Jazz/R&B
- Religious
- Rock
- Soft
- Top 40

RDS show

RDS sends information with the FM broadcast, including: station name, station type, and/or radio text. To view this information:

- With the RDS menu enabled, press the RDS control until SHOW is displayed.
- Use the SEL control to select TYPE, NAME, TEXT or NONE. When your radio is turned to a RDS station, RDS station TYPE, station NAME, or TEXT message will be displayed along with the frequency. Press SEL in order to scroll through the text messages.

Mute mode

Press the control to mute the playing media. Press the control again to return to the playing media.

Rear seat controls (if equipped)

The Rear Seat Controls (RSC) allow the rear seat passengers to operate the radio, tape, CD, or CD changer (if equipped).

Controls and features

To turn on the rear seat controls, press the memory preset controls 3 and 5 at the same time. The  will appear in the radio display.

Pressing 3 and 5 at the same time again will turn the rear seat controls off.

If there is a discrepancy between the rear seat and the front audio controls, (i.e, both trying to listen to the same playing media), the front audio system will receive the desired selection.

Adjusting the volume

Press the + control to increase volume.

Press the — control to decrease volume.

From the RSC controls, the speaker volume can not be set higher than the current volume radio setting. Once in headphone mode, the RSC volume controls will only change volume in the headphones to a desired level and will have no effect on the front speakers (muting the speakers will not mute the headphones).

Using headphones/Personal Audio System

The Personal Audio System allows the rear seat passengers to listen to one media source (radio, tape, CD, or CD changer if equipped) while the front seat passengers listen to another. However, front and rear seat passengers can not listen to two different radio stations simultaneously.

Plug a 3.6 mm headphone (not included) into either one of the two  jacks. Press the  /  control to operate the headphones.

Controls and features

The rear speakers will cut out once the speaker on/off control is pressed. A soft audible sound may be heard from the rear speakers. The front speaker will remain playing for the front passengers. Press the / control again to deactivate headphones (Personal Audio System).

Media select

Push the MEDIA control to toggle between AM, FM1, FM2, tape, CD, or CD changer (if equipped).

Memory preset control

Push the MEM control successively to allow rear seat passengers to scroll through the 6 memory presets in AM, FM1, or FM2.

Push the MEM control in CD changer mode (if equipped) to advance to the next disc.

Seek function

- Press to find the next listenable station down the frequency band.
- Press to find the next listenable station up the frequency band.

In tape mode, use the SEEK function to access the next or previous selection.

In CD or CD changer mode (if equipped), use the SEEK function to access the next or previous selection.

Controls and features

CD changer (if equipped)

The CD changer is located in the center console of your vehicle.

1. Slide the door to access the CD changer magazine.

2. Press  to eject the magazine.

3. Turn the magazine (A) over.
4. Using the disc holder release knob (C), pull the disc holder (B) out of the magazine.

Controls and features

If you pull too hard on the disc holder, the disc holder may come completely out of the magazine. If this happens, reinsert the disc holder back into the magazine while pressing on the lever (A).

5. Line up the CD with the groove of the disc holder. Ensure that the label on the CD faces downwards.

6. Press in on the disc holder until it locks securely into the magazine. If the disc holders are not fully locked into the magazine, the unit will not operate.

Ensure that the disc holder is evenly inserted and at the same level as the magazine (A). The unit will not operate if the disc holder is not inserted at the same level (B).

Radio power must be turned on to play the CDs in the changer. The magazine may be stored in the glove box when not being used.

Controls and features

The CD magazine may be inserted or ejected with the radio power on or off. ONLY use the magazine type supplied with the CD changer, other types will damage the unit.

Keep the CD changer door closed. Coins and foreign objects will damage the CD player and void your audio system warranty.

Do not insert any promotional (odd shaped or sized) discs into the CD changer as that jamming may occur.

Troubleshooting the CD changer (if equipped)

The laser beam used in the compact disc player is harmful to the eyes. Do not attempt to disassemble the case.

If sound skips:

- You may be traveling on a rough road, playing badly scratched discs or the disc may be dirty. Skipping will not scratch the discs or damage the player.

If your changer does not work, it may be that:

- A disc is already loaded where you want to insert a disc.
- The disc is inserted with the label surface downward.
- The disc is dusty or defective.
- The player's internal temperature is above 60°C (140°F). Allow the player to cool down before operating.
- A disc with format and dimensions not within industry standards is inserted.

Cleaning compact discs

Inspect all discs for contamination before playing. If necessary, clean discs only with an approved CD cleaner and wipe from the center out to the edge. Do not use circular motion.

CD and CD changer care

- Handle discs by their edges only. Never touch the playing surface.
- Do not expose discs to direct sunlight or heat sources for extended periods of time.
- Do not insert more than one disc into each slot of the CD changer magazine.

Controls and features

Cleaning cassette player

Clean the tape player head with a cassette cleaning cartridge after ten to twelve hours of play in order to maintain the best sound and operation.

Cassette and cassette player care

- Use only cassettes that are 90 minutes long or less.
- Do not expose tapes to direct sunlight, high humidity, extreme heat or extreme cold. Allow tapes that may have been exposed to extreme temperatures to reach a moderate temperature before playing.
- Tighten very loose tapes by inserting a finger or pencil into the hole and turning the hub.
- Remove loose labels before inserting tapes.
- Do not leave tapes in the cassette player for a long time when not being played.

Radio frequency information

The Federal Communications Commission (FCC) and the Canadian Radio and Telecommunications Commission (CRTC) establish the frequencies AM and FM stations may use for their broadcasts. Allowable frequencies are:

AM 530, 540–1600, 1610 kHz

FM 87.9, 88.1–107.1, 107.9 MHz

Not all frequencies are used in a given area.

Radio reception factors

Three factors can affect radio reception:

- **Distance/strength.** The further an FM signal travels, the weaker it is. The listenable range of the average FM station is approximately 40 km (24 miles). This range can be affected by “signal modulation.” Signal modulation is a process radio stations use to increase their strength/volume relative to other stations.
- **Terrain.** Hills, mountains and tall buildings between your vehicle’s antenna and the radio station signal can cause FM reception problems. Static can be caused on AM stations by power lines, electric fences, traffic lights and thunderstorms. Moving away from an interfering structure (out of its “shadow”) returns your reception to normal.

Controls and features

- **Station overload.** Weak signals are sometimes captured by stronger signals when you pass a broadcast tower. A stronger signal may temporarily overtake a weaker signal and play while the weak station frequency is displayed.

The audio system automatically switches to single channel reception if it will improve the reception of a station normally received in stereo.

Audio system warranties and service

Refer to the “Warranty Guide” for audio system warranty information.

If service is necessary, see your dealer or a qualified technician.

AUXILIARY POWER POINT

The power point is an additional power source for electrical accessories.

There are two auxiliary power points:

- One is located on the instrument panel.

- The second is located in the drivers side 2nd row trim panel.

Controls and features

POSITIONS OF THE IGNITION

1. OFF/LOCK, shuts off the engine and all accessories/locks the steering wheel, gearshift lever and allows key removal.

2. ACC, allows the electrical accessories such as the radio to operate while the engine is not running.

3. ON, all electrical circuits operational. Warning lights illuminated. Key position when driving.

4. START, cranks the engine. Release the key as soon as the engine starts.

SPEED CONTROL

To turn speed control on

- Press CRUISE.

Vehicle speed cannot be controlled until the vehicle is traveling at or above 48 km/h (30 mph).

Do not use the speed control in heavy traffic or on roads that are winding, slippery, or unpaved.

Do not shift the gearshift lever into N (Neutral) with the speed control on.

Controls and features

To turn speed control off

- Press OFF.

Once speed control is switched off, the previously programmed set speed will be erased.

To set a speed

- Press COAST/SET. For speed control to operate, the speed control must be ON and the vehicle speed must be greater than 48 km/h (30 mph).

If you drive up or down a steep hill, your vehicle speed may vary momentarily slower or faster than the set speed. This is normal.

Speed control cannot reduce the vehicle speed if it increases above the set speed on a downhill. If your vehicle speed is faster than the set speed while driving on a downhill, you may want to shift to the next lower gear or apply the brakes to reduce your vehicle speed.

If your vehicle slows down more than 16 km/h (10 mph) below your set speed on an uphill, your speed control will disengage. This is normal. Pressing RES/ACCEL will re-engage it.

Do not use the speed control in heavy traffic or on roads that are winding, slippery, or unpaved.

Controls and features

To set a higher set speed

- Press and hold RES/ACCEL. Release the control when the desired vehicle speed is reached or
- Press and release RES/ACCEL. Each press will increase the set speed by 1.6 km/h (1 mph) or
- Accelerate with your accelerator pedal. When the desired vehicle speed is reached, press and release COAST/SET.

You can accelerate with the accelerator pedal at any time during speed control usage. Releasing the accelerator pedal will return your vehicle to the previously programmed set speed.

To set a lower set speed

- Press and hold COAST/SET. Release the control when the desired speed is reached or
- Press and release COAST/SET. Each press will decrease the set speed by 1.6 km/h (1 mph) or
- Depress the brake pedal. When the desired vehicle speed is reached, press COAST/SET.

Controls and features

To disengage speed control

- Depress the brake pedal.

- Press CANCEL.

Disengaging the speed control will not erase the previously programmed set speed.

- Press OFF.

Pressing OFF will erase the previously programmed set speed.

Controls and features

To return to a previously set speed

- Press RES/ACCEL. For RES/ACCEL to operate, the vehicle speed must be faster than 48 km/h (30 mph).

Indicator light

This light comes on in the instrument cluster when either the COAST/SET or RES/ACCEL controls are pressed. It turns off when the speed control OFF control is pressed, the brake is applied or the ignition is turned to the OFF position.

CRUISE

STEERING WHEEL CONTROLS (IF EQUIPPED)

These controls allow you to operate some audio control features.

Audio control features

In Radio mode:

- Press NEXT to select the next preset station within the current radio band.

In Tape mode:

- Press NEXT to listen to the next selection on the tape.

In CD mode:

- Press NEXT to listen to the next track on the disc.

Controls and features

In any mode:

- Press VOL up or down to adjust the volume.

TURN SIGNAL CONTROL

- Push down to activate the left turn signal.
- Push up to activate the right turn signal.

WINDSHIELD WIPER/WASHER CONTROLS

Rotate the windshield wiper control to the desired interval, low or high speed position.

The bars of varying length are for intermittent wipers. When in this position rotate the control upward for fast intervals and downward for slow intervals.

Push the control on the end of the stalk to activate washer. Push and hold for a longer wash cycle. The washer will automatically shut off after ten seconds of continuous use.

Controls and features

Rear window wiper and washer

Press the wiper control to activate the rear wiper. Press again to turn off the wiper. The wiper operates at a pre-set interval.

Press the washer control to activate the rear washer. The wiper will come on when the washer control is pressed, if it is not already on.

HAZARD FLASHER

For information on the hazard flasher control, refer to *Hazard flasher* in the *Roadside emergencies* chapter.

OVERDRIVE CONTROL

Activating overdrive

D (Overdrive) is the normal drive position for the best fuel economy. The overdrive function allows automatic upshifts from third to fourth gear.

Controls and features

Deactivating overdrive

Press the Transmission Control Switch (TCS) located on the end of the gearshift lever. The O/D OFF indicator light will illuminate.

The transaxle will operate in all gears except overdrive. To return to normal overdrive mode, press the Transmission Control Switch again. The O/D OFF indicator light will no longer be illuminated.

When you shut off and re-start your vehicle, the transaxle will automatically return to normal D (Overdrive) mode.

For additional information about the gearshift lever and the transmission control switch operation refer to the *Automatic Transaxle Operation* section of the *Driving* chapter.

TILT STEERING WHEEL

Push the tilt steering wheel lever downward to move the steering wheel up or down. Push the control upward to lock the steering wheel in position.

Never adjust the steering wheel when the vehicle is moving.

Controls and features

POWER WINDOWS

- Press and hold the switch to open.
- Pull up and hold the switch to close.

Power vent windows (if equipped)

Your vehicle may be equipped with rear power vent windows which are operated the same as the front power windows.

One touch down

- Press AUTO completely down and release quickly. The driver's window will open fully. Depress again to stop window operation.

The window lock feature allows only the driver to operate the power windows.

To lock out all the window controls except for the driver's press the control. Press the control again to restore the window controls.

Controls and features

Accessory delay

With accessory delay, the window and moonroof switches may be used for up to 15 minutes after the ignition switch is turned to the OFF position or until either of the front doors are opened.

POWER DOOR LOCKS

Push control forward to unlock all doors and pull backward to lock all doors.

Anti-lockout

This feature prevents the front doors from being locked while the key is in the ignition and the driver's door is open. Remove the key from the ignition before exiting the vehicle.

Central locking (if equipped)

When unlocking the front doors with the key, turn the key once toward the rear of the vehicle to unlock that door only. Turn the key back to the original position and then to the rear a second time to unlock all doors.

When locking, turn the key toward the front of the vehicle to lock all doors.

FRONT MANUAL DOOR LOCKS

- Flip lock control, located above door handle, out to unlock.
- Flip lock control in to lock, this will lock all doors if done from either front door.

CHILDPROOF DOOR LOCKS

When these locks are set, the rear doors cannot be opened from the inside. The rear doors can be opened from the outside when the doors are unlocked.

The childproof locks are located on front edge of each sliding rear door and must be set separately for each door. Setting the lock for one door will not automatically set the lock for both doors.

Controls and features

Pull lock control out to engage the lock. Push control in to disengage childproof locks.

POWER SIDE VIEW MIRRORS

The ignition must be in ACC or ON position to adjust the power side view mirrors.

To adjust your mirrors:

1. Select L to adjust the left mirror or R to adjust the right mirror.

Controls and features

2. Move the control in the direction you wish to tilt the mirror.

3. Return to the center position to lock mirrors in place.

Heated outside mirrors (if equipped)

Both mirrors are heated automatically to remove ice, mist and fog when the rear window defrost is activated.

Do not remove ice from the mirrors with a scraper or attempt to readjust the mirror glass if it is frozen in place. These actions could cause damage to the glass and mirrors.

POSITIVE RETENTION FLOOR MAT

Position the floor mat so that the eyelet is over the pointed end of the retention post. Make sure that the mat does not interfere with the operation of the accelerator or the brake pedal.

Controls and features

HOMELINK® UNIVERSAL TRANSCEIVER WITH TRAVELNOTE® (IF EQUIPPED)

The HomeLink® Universal Transceiver, located on the driver's visor, provides a convenient way to replace up to three hand-held transmitters with a single built-in device. This feature will learn the radio frequency codes of most current transmitters to operate garage doors, entry gates, security systems, entry door locks, and home or office lighting.

When programming your HomeLink® Universal Transceiver, to a garage door or gate be sure that people and objects are out of the way to prevent potential harm or damage.

Do not use the HomeLink® Universal Transceiver with any garage door opener that lacks safety stop and reverse features as required by U.S. federal safety standards (this includes any garage door opener model manufactured before April 1, 1982). A garage door which cannot detect an object, signaling the door to stop and reverse, does not meet current U.S. federal safety standards. For more information on this matter, call toll-free: 1-800-355-3515 or on the Internet at HomeLink.jci.com.

Programming

1. Prepare for programming the HomeLink® Universal Transceiver by erasing the three factory default codes by holding down the two outside buttons until the red light begins to flash after 20 seconds. Release both buttons.

2. Hold the end of your hand-held transmitter 5–14 cm (2–5 inches) away from the HomeLink® Universal Transceiver surface (located on your visor) while keeping the red light in view.

3. Using both hands simultaneously press and hold the hand-held transmitter button and the desired HomeLink® button. Do not release the buttons until step 4 has been completed.

Controls and features

4. The red light will flash slowly and then rapidly. Release both buttons when the red light flashes rapidly.

5. Follow steps 2 through 4 to program the remaining two buttons.

If you do not successfully program the HomeLink® Universal Transceiver after repeated attempts, refer to *Rolling code programming* which follows, or call toll-free customer assistance: 1-800-355-3515 or on the Internet at **HomeLink.jci.com**.

Canadian Programming

During programming, your hand-held transmitter may automatically stop transmitting after two seconds which may not be long enough to program the HomeLink® Universal Transceiver.

To program your hand-held transmitters:

- continue to hold the button on the HomeLink® Universal Transceiver.
- press and re-press the hand-held transmitter button every two seconds until the red light changes from a slow to a fast flash.

Operating the HomeLink® Universal Transceiver

Once programmed, the HomeLink® Universal Transceiver can be used in place of hand-held transmitters. To operate, simply press and release the appropriate HomeLink® button (the red light will illuminate, indicating the signal is being transmitted).

Rolling code programming

Rolling code garage door openers (or other rolling code devices) which are “code protected” and manufactured after 1996, may be determined by the following:

- Reference the device owner’s manual for verification

Controls and features

- The hand-held transmitter appears to program the HomeLink® Universal Transceiver but does not activate the device.
- Press and hold the trained HomeLink® button. The device has the rolling code feature if the indicator light flashes rapidly and then turns solid after 2 seconds.

After completing the “Programming” functions, follow these steps to train a garage door opener with the rolling code feature:

1. Locate the **training button** on the garage door motor head unit. Refer to the garage door opener manual or call 1-800-355-3515 or on the Internet at **HomeLink.jci.com**. if there is difficulty locating the training button.
2. Press the training button on the garage door motor head unit (which will activate the **“training” light**.)
3. Press and release the programmed HomeLink® button. Press and release the HomeLink® button a *second time* to complete the training process. (Some garage door openers may require this procedure to be done a third time to complete the training).

The 2nd or 3rd press from step 3 will activate the door. The HomeLink® Universal Transceiver has now been trained to the receiver. The remaining two buttons may now be programmed if this has not previously been done.

Erasing HomeLink® buttons

Individual buttons cannot be erased, however, to erase the three programmed buttons:

1. Hold down the two outside buttons until the red light begins to flash after 20 seconds.
2. Release both buttons.

Reprogramming a single HomeLink® button

To program a device to HomeLink® using a HomeLink® button previously trained, follow these steps:

Controls and features

1. Press and hold the desired HomeLink® button. **Do NOT** release until **step 4** has been completed.
2. When the indicator light begins to flash slowly (after 20 seconds), position the hand-held transmitter 5–14 cm (2 to 5 inches) away from the HomeLink® surface.
3. Press and hold the hand-held transmitter button.
4. The HomeLink® indicator light will flash, first slowly and then rapidly. When the indicator light begins to flash rapidly, release both buttons.

The previous device has now been erased and the new device can be activated by pushing the HomeLink® button that has just been programmed.

Operating TravelNote®

TravelNote® records and stores messages for up to three minutes in total length with simple controls. When you get an idea or remember something important while you're driving, you don't have to try to scribble it down or pull off the side of the road. All you have to do is push a button and begin speaking.

To record a message:

1. Press and release the **REC** button *one time* to start recording. (An audible tone will sound, confirming the onset of recording).
2. Press and release the **REC** button *a second time* to end recording. (An audible tone will sound again, confirming the end of recording and the red indicator light will turn off.)
3. While a message is being recorded, the indicator light will be a solid red.
4. If the message exceeds the available memory space, two tones will sound, the indicator light will flash amber and recording will end.

The indicator light will flash amber and an “error” tone will sound if the **REC** button is pressed when memory is full.

Controls and features

To play a message:

1. Press and release the **PLAY** button to play the message.
2. Press and hold the **PLAY** button to hear all the messages in consecutive order starting with the most recent.
3. If the **PLAY** button is pressed while a message is being listened to, TravelNote will skip to the beginning of the next message.
4. During all **PLAY** functions, the indicator light will be a solid green.

The indicator light will flash amber and an “error” tone will sound if the **PLAY** button is pressed but no message is currently in memory.

To delete a message:

1. Press and release the **DEL** button while listening to a message or shortly after. The indicator light will flash green twice.
2. To delete all recorded messages, simultaneously press and release the **PLAY** and **REC** buttons at the same time. The indicator light will flash green twice.

If the **DEL** button is inadvertently pressed or the time allotted (5 seconds) has passed, the indicator light will flash amber and an “error” tone will sound.

ILLUMINATED VISOR MIRROR (IF EQUIPPED)

To turn on the visor mirror lamps, lift the mirror cover.

OVERHEAD CONSOLE (IF EQUIPPED)

The appearance of your vehicle’s overhead console will vary according to your option package.

Controls and features

Storage bin (if equipped)

The storage compartment may be used to store small objects.

Push in to open or close the cover.

Installing a garage door opener (if equipped)

The storage compartment can be converted to accommodate a variety of aftermarket garage door openers:

- Remove the GARAGE control button from the storage compartment.
- Place Velcro[®] on aftermarket transmitter opposite of actuator control.
- Install the transmitter into storage compartment, control down.

Controls and features

- Place the provided height adaptors on the back of the GARAGE control button as needed.
- Place the GARAGE control button in the storage compartment.
- Close cover and press the GARAGE control button to activate the transmitter.

INTERIOR LAMPS

Dome lamps

The front dome lamp is located overhead between the driver and passenger seats.

The dome lamp will stay on if the control is moved to the ON position. When the control is in the middle position, the lamp will only come on when a door is opened. If the control is moved to the OFF position, the lamp will not come on at all.

The dome lamp will illuminate whenever a front door is opened. If either front door has been opened from the outside, the lamp will remain on for 15 seconds after the door is shut. If any other door has been opened from the inside, the lamp will shut off immediately after the door is closed.

Map lamps (if equipped)

The map lamps are located on the overhead console and the side roof panels. Press the lamp lens to activate the lamps.

Controls and features

MOON ROOF (IF EQUIPPED)

To operate the moon roof:

- To open, press and hold the rear portion of the control. This will fully open the moon roof.
- To close, press and hold the front portion of the control.

To operate the moon roof vent position:

- To open, press and hold the front portion of the control. This will open the vent.
- To close, press and hold the rear portion of the control.

If the battery is disconnected, discharged, or a new battery is installed, the moon roof needs to be opened to the vent position to reset the moon roof positions.

If you open and close the moon roof repeatedly, the moon roof motor may overheat and shut down for 45 seconds while the motor cools.

Do not let children play with the moon roof. They may seriously hurt themselves.

REMOTE ENTRY SYSTEM (IF EQUIPPED)

The remote entry system allows you to:

- lock or unlock all vehicle doors without a key.
- activate the panic alarm.

If there is any potential remote keyless entry problem with your vehicle, ensure **ALL key fobs** (remote entry transmitters) are brought to the dealership, to aid in troubleshooting.

Controls and features

Unlocking the doors

Press this control to unlock the driver's door. The interior lamps will illuminate and the parking and tail lamps will flash once.

Press the control a second time within five seconds to unlock all doors.

Locking the doors

Press this control to lock all doors.

To confirm all doors are closed and locked, the horn will chirp and the lamps will flash. The horn chirp feature can be turned on/off by holding the LOCK and UNLOCK controls on the transmitter simultaneously for two seconds. The hazard lights will flash three times each time the system is toggled between active and non-active modes.

If any of the doors are ajar, the horn will not chirp and the lights will not flash.

Sounding a panic alarm

To activate the alarm, press and hold the PANIC control for longer than 1.5 seconds. The horn will sound and the headlamps and tail lights will flash for thirty (30) seconds.

To deactivate the alarm, press the LOCK or UNLOCK or hold the PANIC control down for longer than 1.5 seconds.

Controls and features

This device complies with part 15 of the FCC rules and with RS-210 of Industry Canada. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Illuminated entry

The interior lamps illuminate when the remote entry system is used to unlock the door(s) or sound the panic alarm.

The system automatically turns off after 15 seconds or when the ignition is turned to the RUN position.

The inside lights will not turn off if:

- they have been turned on with the headlamp control or
- any door is open.

The battery saver will shut off the interior lamps after 30 minutes if the front door is left open or after 60 minutes if the liftgate is left open.

Illuminated exit

The interior lights will illuminate when the key is removed from the ignition.

The system automatically turns off after 25 seconds or when the driver's door is opened.

Replacing the battery

The transmitter is powered by one coin type three-volt lithium battery. Typical operating range will allow you to be up to 10 meters (33 feet) away from your vehicle. A decrease in operating range can be caused by:

- weather conditions
- nearby radio towers
- structures around the vehicle
- other vehicles parked next to the vehicle

Controls and features

To replace the battery:

1. Twist a thin coin between the two halves of the transmitter near the key ring. DO NOT TAKE THE FRONT PART OF THE TRANSMITTER APART.
2. Place the positive (+) side of new battery up. Refer to the diagram inside the transmitter unit.
3. Snap the two halves back together.

Replacing lost transmitters

Take all your vehicle's transmitters to your dealer if service is required.

If you purchase additional transmitters (up to four may be programmed), perform the following procedure:

With all doors closed and locked, insert and remove the key from the ignition six times within ten seconds. All lights (except headlamps) will flash twice.

Press any control on the transmitter while in the ID registration mode. All lights (except headlamps) will flash twice to acknowledge acceptance of registration.

To program additional (up to four) transmitters yourself:

- Unlock, then lock the driver's door using the power door lock switch.
- Press any control on the next transmitter to be programmed. All lights (except headlamps) will flash twice to acknowledge acceptance of registration.

When ID registration is complete, open the driver's door. All lights (except headlamps) will flash twice.

All transmitters **must** be programmed at the same time.

Controls and features

ANTI-THEFT SYSTEM (IF EQUIPPED)

When armed, the anti-theft system will help prevent your vehicle from unauthorized entry.

If there is any potential perimeter anti-theft problem with your vehicle, ensure **ALL key fobs** (remote entry transmitters) are brought to the dealership, to aid in troubleshooting.

Arming the system

When unauthorized entry occurs, the system will flash headlamp lamps, tail lamps and the security indicator lamp, chirp the horn and disable the starting system.

The system is ready to arm whenever the ignition is turned OFF. Any of the following actions will prearm the alarm system:

- Lock the doors with the remote transmitter (doors opened or closed). The horn will chirp (if all doors are closed) to confirm that the control was pressed. The horn chirp feature can be turned on/off by holding the LOCK and UNLOCK controls on the transmitter simultaneously for two seconds. The hazard lights will flash three times each time the system is toggled between active and non-active modes.
- Open a door and press the power door lock control to lock the doors.

Controls and features

If a door is open, the system is prearmed and is waiting for the door to close. Once all the doors are closed, the security indicator lamp on the instrument panel will illuminate continuously when the system is prearmed.

Once the doors are closed, the system will arm in 30 seconds and the security indicator lamp will begin to flash.

Disarming the anti-theft system

Disarming an untriggered anti-theft system

You can disarm the system by any of the following actions:

- Unlock the doors by using your remote entry transmitter.
- Unlock the doors with a key. Turn the key full travel (toward the rear of the vehicle) to make sure the alarm disarms.
- Turn ignition to ACC or ON.

Triggering the anti-theft system

The armed system will be triggered if:

- Any door or liftgate is opened without using the door key or the remote entry transmitter.
- The hood is forced opened.

Controls and features

Disarming a triggered anti-theft system

You can disarm the system by any of the following actions:

- Press the unlock control.
- Unlock the doors with a key.

LIFTGATE

To open the liftgate window (if equipped), insert key into lock and turn clockwise. The window unlatches and the wiper moves out of the way.

To open the liftgate, insert key into lock and turn counterclockwise. Pull back and upward on liftgate handle to fully open liftgate.

- The auto-rise feature automatically raises the liftgate or window (if equipped). In cold weather you may have to assist opening the liftgate or window since the auto-rise feature may slow down.
- Do not open the liftgate or liftgate window in a garage or other enclosed area with a low ceiling. If the liftgate window is raised and the liftgate is also opened, both liftgate and window could be damaged against a low ceiling.
- The liftgate can be locked by turning the key clockwise in between the upright key position and the liftgate window (if equipped) key position. Do not turn the key fully clockwise unless you wish to open the liftgate window (if equipped).

Controls and features

 Make sure that the liftgate door and/or window are closed to prevent exhaust fumes from being drawn into the vehicle. This will also prevent passengers and cargo from falling out. If you must drive with the liftgate door or window open, keep the vents open so outside air comes into the vehicle.

CARGO AREA FEATURES

Rear Cargo net

The cargo net helps stabilize lightweight objects in the cargo area. Attach the net to the anchors provided. The cargo restrained in the net must not exceed 22 kg (50 lbs.) or the net may not stay secured.

 The cargo net is not designed to restrain objects during a collision or heavy braking.

Controls and features

Front Cargo net

The front cargo net can be used to hold small items between the front seats. To install the net, secure the hooks into the retainers located on the inboard base of the front seats.

Parcel Shelf (if equipped)

Your vehicle may be equipped with a 14 kg (30 lbs.) maximum capacity parcel shelf located behind the rear seat of your vehicle which can be positioned to three different heights.

To remove the shelf:

1. Open the liftgate.
2. Disconnect the net loop from the retainer underneath the shelf to access the lock knob.
3. Turn the lock knob counterclockwise and slide the knob to the UNLATCH position.
4. Remove the shelf from the vehicle.

To install the shelf:

1. Position and slide the shelf into the right mounting bracket; then align the shelf into the left mounting bracket.
2. Slide the lock knob to the LATCH position and tighten the lock knob clockwise.
3. Connect the net loop to the retainer underneath the shelf and close the liftgate.

Controls and features

To secure objects on the shelf:

1. Disconnect the net loops from the retainers underneath the shelf.
2. Place the objects underneath the net and secure the net loops to the retainers underneath the shelf.

All objects loaded on the cargo shelf **MUST BE SECURED UNDER THE CARGO NET**. The net is permanently attached to the cargo shelf.

Do not load more than 14 kg (30 lbs.) on the parcel shelf.

Make sure the rear seat back is in the rearmost/upright position when parcel shelf is loaded.

Do not load any objects on the parcel shelf that may obstruct your vision or strike occupants of the vehicle in the case of a sudden stop or collision.

Failure to secure cargo under the cargo net will increase the risk of the cargo striking occupants in the case of a sudden stop or collision.

Do not load the parcel shelf through the liftgate glass. You **MUST** open the entire rear liftgate to gain access to the rear net retainers under the shelf.

To properly use child safety tethers in the 3rd row seat position, **REMOVE THE PARCEL SHELF** and tether child safety seat to the tether anchor located on the floor behind the 3rd row seat.

Do not place people or pets on or under the parcel shelf.

Seating and safety restraints

SEATING

Adjustable head restraints

Your vehicle's seats may be equipped with head restraints which are vertically adjustable. The purpose of these head restraints is to help limit head motion in the event of a rear collision. To properly adjust your head restraints, lift the head restraint so that it is located directly behind your head or as close to that position as possible. Refer to the following to raise and lower the head restraints.

The head restraints can be moved up and down.

Push side control and push down on head restraint to lower it.

Adjusting the front manual seat

Never adjust the driver's seat or seatback when the vehicle is moving.

Do not pile cargo higher than the seatbacks to avoid injuring people in a collision or sudden stop.

Seating and safety restraints

Always drive and ride with your seatback upright and the lap belt snug and low across the hips.

Reclining the seatback can reduce the effectiveness of the seat's safety belt in the event of a collision.

Lift handle to move seat forward or backward.

Pull lever up to adjust seatback.

Adjusting the power seats (if equipped)

The power seat controls are located on the outboard side of the seat.

Never adjust the driver's seat or seatback when the vehicle is moving.

Seating and safety restraints

Always drive and ride with your seatback upright and the lap belt snug and low across the hips.

Reclining the seatback can reduce the effectiveness of the seat's safety belt in the event of a collision.

Move the control up or down to move the seat up and down.

- 6 way (driver seat)

Slide the control forward or backward to move the seat forward or backward.

- 6 way (driver seat)

- 4 way (passenger seat)

Rotate the vertical control to adjust the seatback.

Seating and safety restraints

The lumbar control is located on the inboard side of the driver's seat.

Move the control up or down to adjust lumbar support.

Memory seats and mirrors (if equipped)

The memory seat control is located on the driver's door panel. The control operates with the ignition in the OFF position or the ignition is in the ON position and the vehicle is in P (Park) or N (Neutral).

The two buttons provide three memory positions, one individual position for each button and a third position obtained by pressing buttons 1 and 2 simultaneously.

Position three (pressing 1 and 2 simultaneously) is always full rearward and downward for exit mode, but is not programmable.

To record the memory positions:

1. Move the seat and mirror to the desired position using the manual controls.
2. Press button 1 or 2 and hold for at least two seconds. The indicator light will stay on until the position is programmed. When the position has been programmed, the indicator light will flash three times. Repeat procedure for second position.

To record a remote entry transmitter:

1. Program a desired position to a memory switch as indicated above.

Seating and safety restraints

2. Press and hold the desired memory position button. Within ten seconds, press the unlock button on the transmitter while the memory button is pressed.

3. When the transmitter has been programmed, the indicator will flash five times. The indicator light will remain illuminated until the memory button is pressed again or ten seconds lapse.

To remove a remote entry transmitter from memory:

1. Press and hold both memory seat buttons 1 and 2 and then press the unlock button on the remote entry transmitter.

REAR SEATS

Removable floor mats

Whenever the floor mats are removed to adjust or move any of the rear seats, always reinstall the mats before passengers ride in the vehicle. The floor mats are specifically designed to keep objects out of the seat tracks.

The cargo mat (A.) can be reversed (top to bottom) to retain soils and liquids.

- 7 passenger vehicle

A. Cargo mat

B. Narrow mats

C. Sliding door mats, LH/RH

Seating and safety restraints

- 4 passenger vehicle (with third row seat in storage position)
 - A. Cargo mat
 - B. Narrow mats
 - C. Sliding door mats, LH/RH

- 5 passenger vehicle (second row seats removed)
 - A. Cargo mat
 - B. Narrow mats
 - C. Sliding door mats, LH/RH

Seating and safety restraints

- 5 passenger vehicle (second row seats removed and third row bench seat moved forward to limousine seating position)
 - A. Cargo mat
 - B. Narrow mats

- Two passenger vehicle (second row seats removed and third row seat stored in full forward position)
 - A. Cargo mat
 - B. Narrow mats

Stowed cupholders

The vehicle is equipped with cupholders that pull out from the 2nd row seat:

- Bench seat - below center of the seat cushion

Seating and safety restraints

- Bucket seat (driver's side only) - inboard side of seat base

Use only soft cups in the cupholder. Hard objects can injure you in a collision.

Adjusting 2nd row bench

Pull control up to flip seatback to forward flat position.

Seating and safety restraints

2nd row bucket seats (if equipped)

- **Adjusting the left side bucket seat**

Pull control up to recline the seatback or fold the seatback flat.

- **Adjusting the right side (E-Z Entry Tip Slide) bucket seat**

The E-Z Entry Tip Slide seat allows for easier entry and exit to and from the 3rd row seat. The E-Z Entry system will slide the seat and tip the seatback forward (the seatback must be in the upright position).

To enter the 3rd row seat, pull up on the seatback recline handle.

Seating and safety restraints

To exit the third row seat, pull up on the 3rd row access control.

To return the seat to a seating position, move the seat rearward until the seat track locks. Then readjust the seatback.

Lift handle to move the seat forward or backward.

Seating and safety restraints

Pull control up to flip seatback to a forward flat position.

Adjusting 3rd row bench

Pull control up to adjust seatback position.

This control will also allow the seatback to be put in the forward flat position.

Seating and safety restraints

The entire seat can be moved to four seating positions and two storage positions.

Before rearranging the seats, remove any floor mats that might be in the way, see *Removable floor mats* in this chapter for instructions on placement of floor mats.

For vehicles equipped with a second row bench seat: If the three passenger bench seat is moved up to the second row position, the outside passenger (opposite the driver) should fasten the standard lap/shoulder belt. The secondary seat belt tongue is not fastened to the outside bottom of the seat (as does the two passenger bench seat). This is not required with the three passenger bench seat since the seat is much wider.

The seat tracks may have grease on them that could stain your clothing or vehicle fabric surfaces if care is not taken when handling the seats.

- A. Three rearward seating positions
- B. Limousine seating position (3rd row seat with 2nd row seat removed)
- C. Two storage positions

Seating and safety restraints

To move the seat to another seating or storage position:

1. Lift control (A) to release the seat cushion and flip the cushion up. The seat cushion must be moved to the storage position before the seat can be moved along the track.

2. Pull control (B) to move the seat forward or backward until it locks into position. The seat cushion cannot be lowered if the seat is in a storage position.

Seating and safety restraints

After sliding the seat, check to ensure that both sides of the seat are locked in position. This must be done before the vehicle is put into motion in order to prevent unintended movement of the seat.

 Every time you adjust any seat, check to be sure that it is properly latched in the lock position of both seat tracks. If the seat is not properly latched, it could come loose and increase the risk of severe injury or death in an accident.

The 3rd row bench seat is not removable.

To remove the 2nd row seat(s):

Use the following instructions for both bench and bucket seats.

The seat tracks may have grease on them that could stain your clothing or vehicle fabric surfaces if care is not taken when handling the seats.

Fold the seatback flat before removing each seat. Refer to the *Adjusting 2nd row seats* portion of this section.

1. (Bench seats only) Disengage the lap/shoulder belt from the seat belt detach anchor by pushing the release control and lifting upward.

2. From behind the seat, pull up on the release straps located on each side of the seat, releasing the rear floor latches.

3. Lift up the back of the seat to clear the floor latches and then pull the seat rearward until the front hooks have come out of the floor anchors.

4. Remove the seat. Two people should lift and rotate the seat and remove it from vehicle.

Seating and safety restraints

To install the seat:

The bucket seats are not interchangeable due to the locations of the seat anchors on the floor of the vehicle. Each seat must be installed in its original position.

1. Position the seat in the vehicle.
2. Align seat front hooks to front anchors and push forward into place, lower back of seat into the rear anchors until both rear latches fully engage into place. Be sure that the seat is locked in place both front and back.
3. (Bench seats only) Make sure the safety belt is not twisted, then insert the seat belt tongue into detachable anchor until you hear a “click” and feel the latch engage.

Always latch the vehicle seat to the floor, whether the seat is occupied or empty. If not latched, the seat may cause injury during a sudden stop.

SAFETY RESTRAINTS

Safety restraints precautions

Always drive and ride with your seatback upright and the lap belt snug and low across the hips.

To reduce the risk of injury, make sure children sit where they can be properly restrained.

Never let a passenger hold a child on his or her lap while the vehicle is moving. The passenger cannot protect the child from injury in a collision.

All occupants of the vehicle, including the driver, should always properly wear their safety belts, even when an air bag SRS is provided.

Seating and safety restraints

 It is extremely dangerous to ride in a cargo area, inside or outside of a vehicle. In a collision, people riding in these areas are more likely to be seriously injured or killed. Do not allow people to ride in any area of your vehicle that is not equipped with seats and safety belts. Be sure everyone in your vehicle is in a seat and using a safety belt properly.

 Each seating position in your vehicle has a specific safety belt assembly which is made up of one buckle and one tongue that are designed to be used as a pair. 1) Use the shoulder belt on the outside shoulder only. Never wear the shoulder belt under the arm. 2) Never swing the safety belt around your neck over the inside shoulder. 3) Never use a single belt for more than one person.

 Always transport children 12 years old and under in the back seat and always properly use appropriate child restraints.

Combination lap and shoulder belts

1. Insert the belt tongue into the proper buckle (the buckle closest to the direction the tongue is coming from) until you hear a snap and feel it latch. Make sure the tongue is securely fastened in the buckle.

Seating and safety restraints

2. To unfasten, push the release button and remove the tongue from the buckle.

The front and rear outboard safety restraints in the vehicle are combination lap and shoulder belts. The front passenger and rear seat outboard safety belts have two types of locking modes described below:

Vehicle sensitive mode

The vehicle sensitive mode is the normal retractor mode, allowing free shoulder belt length adjustment to your movements and locking in response to vehicle movement. For example, if the driver brakes suddenly or turns a corner sharply, or the vehicle receives an impact of 8 km/h (5 mph) or more, the combination safety belts will lock to help reduce forward movement of the driver and passengers.

Automatic locking mode

In this mode, the shoulder belt is automatically pre-locked. The belt will still retract to remove any slack in the shoulder belt.

The automatic locking mode is not available on the driver safety belt.

When to use the automatic locking mode

- **Anytime** a child safety seat is installed in a passenger front or outboard rear seating position (if equipped). Refer to *Safety Restraints for Children* or *Safety Seats for Children* later in this chapter.

Seating and safety restraints

How to use the automatic locking mode

- Buckle the combination lap and shoulder belt.

- Grasp the shoulder portion and pull downward until the entire belt is extracted.

- Allow the belt to retract. As the belt retracts, you will hear a clicking sound. This indicates the safety belt is now in the automatic locking mode.

How to disengage the automatic locking mode

Disconnect the combination lap/shoulder belt and allow it to retract completely to disengage the automatic locking mode and activate the vehicle sensitive (emergency) locking mode.

Seating and safety restraints

Front safety belt height adjustment

Your vehicle has safety belt height adjustments for the driver and front passenger. Adjust the height of the shoulder belt so the belt rests across the middle of your shoulder.

To lower the shoulder belt height, push the button and slide the height adjuster down. To raise the height of the shoulder belt, slide the height adjuster up. Pull down on the height adjuster to make sure it is locked in place.

Position the shoulder belt height adjuster so that the belt rests across the middle of your shoulder. Failure to adjust the safety belt properly could reduce the effectiveness of the safety belt and increase the risk of injury in a collision.

Lap belts

Adjusting the lap belt

The lap belt does not adjust automatically.

The lap belts should fit snugly and as low as possible around the hips, not around the waist.

Seating and safety restraints

Insert the tongue into the correct buckle (the buckle closest to the direction the tongue is coming from). To lengthen the belt, turn the tongue at a right angle to the belt and pull across your lap until it reaches the buckle. To tighten the belt, pull the loose end of the belt through the tongue until it fits snugly across the hips.

Shorten and fasten the belt when not in use.

Safety belt extension assembly

If the safety belt assembly is too short, even when fully extended, 20 cm (8 inches) can be added to the safety belt assembly by adding a safety belt extension assembly (part number 611C22). Safety belt extension assemblies can be obtained from your dealer at no cost.

Use only extensions manufactured by the same supplier as the safety belt. Manufacturer identification is located at the end of the webbing on the label. Also, use the safety belt extension only if the safety belt is too short for you when fully extended. Do not use extensions to change the fit of the shoulder belt across the torso.

Safety belt warning light and indicator chime

The seat belt warning light illuminates in the instrument cluster and a chime sounds to remind the occupants to fasten their safety belts.

Seating and safety restraints

Conditions of operation

If...	Then...
The driver's safety belt is not buckled before the ignition switch is turned to the ON position...	The safety belt warning light illuminates until safety belt is buckled.
The driver's safety belt is buckled while the indicator light is illuminated and the warning chime is sounding...	The safety belt warning light and warning chime turn off.
The driver's safety belt is buckled before the ignition switch is turned to the ON position...	The safety belt warning light and indicator chime remain off.

Safety belt maintenance

Inspect the safety belt systems periodically to make sure they work properly and are not damaged. Inspect the safety belts to make sure there are no nicks, wears or cuts, replacing if necessary. All safety belt assemblies, including retractors, buckles, front seat belt buckle assemblies, buckle support assemblies (slide bar-if equipped), shoulder belt height adjusters (if equipped), child safety seat tether bracket assemblies (if equipped), and attaching hardware, should be inspected after a collision. Ford recommends that all safety belt assemblies used in vehicles involved in a collision be replaced. However, if the collision was minor and a qualified technician finds that the belts do not show damage and continue to operate properly, they do not need to be replaced. Safety belt assemblies not in use during a collision should also be inspected and replaced if either damage or improper operation is noted.

Failure to inspect and if necessary replace the safety belt assembly under the above conditions could result in severe personal injuries in the event of a collision.

Refer to *Cleaning and maintaining the safety belts* in the *Maintenance and care* section.

Seating and safety restraints

AIR BAG SUPPLEMENTAL RESTRAINT SYSTEM (SRS)

Important supplemental restraint system (SRS) precautions

The supplemental restraint system is designed to work with the safety belt to help protect the driver and right front passenger from certain upper body injuries.

Air bags DO NOT inflate slowly or gently and the risk of injury from a deploying air bag is greatest close to the trim covering the air bag module.

All occupants of the vehicle, including the driver, should always properly wear their safety belts, even when an air bag SRS is provided.

Always transport children 12 years old and under in the back seat and always properly use appropriate child restraints.

Seating and safety restraints

National Highway Traffic Safety Administration (NHTSA) recommends a minimum distance of at least 25 cm (ten [10] inches) between an occupant's chest and the driver air bag module.

Never place your arm over the air bag module as a deploying air bag can result in serious arm fractures or other injuries.

Steps you can take to properly position yourself away from the airbag:

- Move your seat to the rear as far as you can while still reaching the pedals comfortably.
- Recline the seat slightly (one or two degrees) from the upright position.

Do not put anything on or over the air bag module. Placing objects on or over the air bag inflation area may cause those objects to be propelled by the air bag into your face and torso causing serious injury.

Do not attempt to service, repair, or modify the Air Bag Supplemental Restraint System or its fuses. See your Ford or Lincoln-Mercury dealer.

Seating and safety restraints

Children and air bags

For additional important safety information, read all information on safety restraints in this guide.

Children must always be properly restrained. Accident statistics suggest that children are safer when properly restrained in the rear seating positions than in the front seating position. Failure to follow these instructions may increase the risk of injury in a collision.

Air bags can kill or injure a child in a child seat.

NEVER place a rear-facing child seat in front of an active air bag. If you must use a forward-facing child seat in the front seat, move the seat all the way back.

How does the air bag supplemental restraint system work?

The air bag SRS is designed to activate when the vehicle sustains longitudinal deceleration sufficient to cause the sensors to close an electrical circuit that initiates air bag inflation.

The fact that the air bags did not inflate in a collision does not mean that something is wrong with the system. Rather, it means the forces were not of the type sufficient to cause activation. Air bags are designed to inflate in frontal and near-frontal collisions, not rollover, side-impact, or rear-impacts.

Seating and safety restraints

The air bags inflate and deflate rapidly upon activation. After air bag deployment, it is normal to notice a smoke-like, powdery residue or smell the burnt propellant. This may consist of cornstarch, talcum powder (to lubricate the bag) or sodium compounds (e.g., baking soda) that result from the combustion process that inflates the air bag. Small amounts of sodium hydroxide may be present which may irritate the skin and eyes, but none of the residue is toxic.

While the system is designed to help reduce serious injuries, it may also cause minor burns, abrasions, swelling or temporary hearing loss. Because air bags must inflate rapidly and with considerable force, there is the risk of death or serious injuries such as fractures, facial and eye injuries or internal injuries, particularly to occupants who are not properly restrained or are otherwise out of position at the time of air bag deployment. Thus, it is extremely important that occupants be properly restrained as far away from the air bag module as possible while maintaining vehicle control.

Several air bag system components get hot after inflation. Do not touch them after inflation.

If the air bag is deployed, **the air bag will not function again and must be replaced immediately.** If the air bag is not replaced, the unrepaired area will increase the risk of injury in a collision.

The SRS consists of:

- driver and passenger air bag modules (which include the inflators and air bags),
- one or more impact and safing sensors,
- a readiness light
- and the electrical wiring which connects the components.

Seating and safety restraints

The diagnostic module monitors its own internal circuits and the supplemental air bag electrical system warning (including the impact sensors), the system wiring, the air bag system readiness light, the air bag back up power and the air bag ignitors.

Determining if the system is operational

The SRS uses a readiness light in the instrument cluster to indicate the condition of the system. Refer to the *Air bag readiness* section in the *Instrumentation* chapter. Routine maintenance of the air bag is not required.

A difficulty with the system is indicated by one or more of the following:

- The readiness light will either flash or stay lit.
- The readiness light will not illuminate immediately after ignition is turned on.

**AIR
BAG**

If any of these things happen, even intermittently, have the SRS serviced at your dealership or by a qualified technician immediately. Unless serviced, the system may not function properly in the event of a collision.

Disposal of air bags and air bag equipped vehicles (including pretensioners)

For disposal of air bags or air bag equipped vehicles, see your local dealership or qualified technician. Air bags **MUST BE** disposed of by qualified personnel.

SAFETY RESTRAINTS FOR CHILDREN

See the following sections for directions on how to properly use safety restraints for children. Also see *Air Bag Supplemental Restraint System (SRS)* in this chapter for special instructions about using air bags.

Important child restraint precautions

You are required by law to use safety restraints for children in the U.S. and Canada. If small children ride in your vehicle (generally children who are four years old or younger and who weigh 18 kg [40 lbs] or less), you must put them in safety seats made especially for children. Check your local and state or provincial laws for specific requirements regarding the safety of children in your vehicle.

Seating and safety restraints

Never let a passenger hold a child on his or her lap while the vehicle is moving. The passenger cannot protect the child from injury in a collision.

Always follow the instructions and warnings that come with any infant or child restraint you might use.

When possible, always place children under age 12 in the rear seat of your vehicle. Accident statistics suggest that children are safer when properly restrained in the rear seating positions than in the front seating position.

Children and safety belts

If the child is the proper size, restrain the child in a safety seat.

Children who are too large for child safety seats (as specified by your child safety seat manufacturer) should always wear safety belts.

Follow all the important safety restraint and air bag precautions that apply to adult passengers in your vehicle.

If the shoulder belt portion of a combination lap and shoulder belt can be positioned so it does not cross or rest in front of the child's face or neck, the child should wear the lap and shoulder belt. Moving the child closer to the center of the vehicle may help provide a good shoulder belt fit.

Do not leave children, unreliable adults, or pets unattended in your vehicle.

To improve the fit of lap and shoulder belts on children who have outgrown child safety seats, Ford recommends use of a belt-positioning booster seat that is labelled as conforming to all Federal motor vehicle safety standards. Belt-positioning booster seats raise the child and provide a shorter, firmer seating cushion that encourages safer seating posture and better fit of lap and shoulder belts on the child.

A belt-positioning booster should be used if the shoulder belt rests in front of the child's face or neck, or if the lap belt does not fit snugly on both thighs, or if the thighs are too short to let the child sit all the way back on the seat cushion when the lower legs hang over the edge of the seat cushion. You may wish to discuss the special needs of your child with your pediatrician.

Seating and safety restraints

SAFETY SEATS FOR CHILDREN

Child and infant or child safety seats

Use a safety seat that is recommended for the size and weight of the child. Carefully follow all of the manufacturer's instructions with the safety seat you put in your vehicle. If you do not install and use the safety seat properly, the child may be injured in a sudden stop or collision.

When installing a child safety seat:

- Review and follow the information presented in the *Air Bag Supplemental Restraint System* section in this chapter.
- Use the correct safety belt buckle for that seating position.
- Insert the belt tongue into the proper buckle until you hear a snap and feel it latch. Make sure the tongue is securely fastened in the buckle.
- Keep the buckle release button pointing up and away from the safety seat, with the tongue between the child seat and the release button, to prevent accidental unbuckling.
- Place seat back in upright position.
- Put the safety belt in the automatic locking mode. Refer to *Automatic locking mode* (passenger side front and outboard rear seating positions).

Seating and safety restraints

Ford recommends the use of a child safety seat having a top tether strap. Install the child safety seat in a seating position which is capable of providing a tether anchorage. For more information on top tether straps, refer to *Attaching safety seats with tether straps*.

Carefully follow all of the manufacturer's instructions included with the safety seat you put in your vehicle. If you do not install and use the safety seat properly, the child may be injured in a sudden stop or collision.

To properly use child safety tethers in the 3rd row seat position, remove the parcel shelf and tether child safety seat to the tether anchor located on the floor behind the 3rd row seat.

Installing child safety seats in combination lap and shoulder belt seating positions

1. Position the child safety seat in a seat with a combination lap and shoulder belt.

An air bag can kill or injure a child in a child seat. If you must use a forward-facing child seat in the front seat, move seat all the way back.

Children 12 and under should be properly restrained in the rear seat whenever possible.

Seating and safety restraints

2. Pull down on the shoulder belt and then grasp the shoulder belt and lap belt together.

3. While holding the shoulder and lap belt portions together, route the tongue through the child seat according to the child seat manufacturer's instructions. Be sure the belt webbing is not twisted.

4. Insert the belt tongue into the proper buckle (the buckle closest to the direction the tongue is coming from) for that seating position until you hear a snap and feel the latch engage. Make sure the tongue is latched securely by pulling on it.

Seating and safety restraints

5. To put the retractor in the automatic locking mode, grasp the shoulder portion of the belt and pull downward until all of the belt is extracted and a click is heard.

6. Allow the belt to retract. The belt will click as it retracts to indicate it is in the automatic locking mode.

7. Pull the lap belt portion across the child seat toward the buckle and pull up on the shoulder belt while pushing down with your knee on the child seat.

8. Allow the safety belt to retract to remove any slack in the belt.

9. Before placing the child in the seat, forcibly tilt the seat forward and back to make sure the seat is securely held in place.

10. Try to pull the belt out of the retractor to make sure the retractor is in the automatic locking mode (you should not be able to pull more belt out). If the retractor is not locked, unbuckle the belt and repeat steps two through nine.

Check to make sure the child seat is properly secured before each use.

Seating and safety restraints

Installing child safety seats in the lap belt seating positions

1. Lengthen the lap belt. To lengthen the belt, hold the tongue so that its bottom is perpendicular to the direction of webbing while sliding the tongue up the webbing.
2. Place the child safety seat in the center seating position.
3. Route the tongue and webbing through the child seat according to the child seat manufacturer's instructions.
4. Insert the belt tongue into the proper buckle for the center seating position until you hear a snap and feel it latch. Make sure the tongue is securely fastened to the buckle by pulling on tongue.
5. Push down on the child seat while pulling on the loose end of the lap belt webbing to tighten the belt.
6. Before placing the child into the child seat, forcibly tilt the child seat from side to side and in forward direction to make sure that the seat is held securely in place. If the child seat moves excessively, repeat steps 5 through 6, or properly install the child seat in a different position.

Attaching safety seats with tether straps

Some manufacturers make safety seats that include a tether strap that goes over the back of the vehicle seat and attaches to an anchoring point. Other manufacturers offer the tether strap as an accessory. Contact the manufacturer of your child safety seat for information about ordering a tether strap.

Children should be placed in the rear in an appropriate child safety seat that is properly secured to the vehicle.

Rear-facing infant seats must always be secured in the rear seat. In vehicles without a rear seat, a rear-facing infant seat should be secured in the front seat only if your vehicle does not have a passenger side air bag or your vehicle is equipped with a passenger air bag deactivate switch and the switch is turned to "OFF."

When using forward-facing child safety seats in vehicles with only two seating positions so the forward-facing child safety seat cannot be placed in the rear of the vehicle, move the passenger seat as far back from the instrument panel as possible.

Seating and safety restraints

Seat Type/Position	Tether to...	Reference Section
3-passenger/3rd row position	Floor anchor directly behind child seat position	<i>3rd row seats</i>
2-passenger bench or bucket/2nd row child seat position	Directly to the rear of the second row seats	<i>2nd row seats</i>
3-passenger/2nd row –Outboard	Tongue of 3rd row belt directly behind child seat position	<i>3rd row bench in 2nd row position</i>
3-passenger/2nd row –Center	CANNOT BE TETHERED	–

Tether strap anchorage locations have been provided in your vehicle. The left side of the figure is the front of the vehicle.

Seating and safety restraints

Second row seats

1. Position the child safety seat on the passenger seat cushion.
2. Route the child safety seat tether strap over the back of the seat.

3. Grasp the tether strap and position it to the seat frame.

Seating and safety restraints

4. Rotate the tether strap.

5. Clip the tether strap to the seat tether slot bracket at the lower rear portion of the seatback.

If the tether strap is clipped incorrectly (as shown) the child safety seat may not be retained properly in the event of a collision.

Seating and safety restraints

6. Rotate the tether strap clip.
7. Refer to the instructions in this section under *Installing child safety seats in combination lap and shoulder belt seating positions* to secure the child safety seat.

8. Tighten the child safety seat tether strap according to the manufacturer's instructions.

Seating and safety restraints

Third row seat and tether anchorage hardware

The tether has to be attached to the anchorage locations on the floor behind the third row seating position (third row seat only) with a tether anchorage hardware kit.

Tether anchorage hardware kits (part number 613D20) including instructions, may be obtained at no charge from any Ford or Lincoln-Mercury dealer. All vehicles built for sale in Canada include a tether anchor hardware kit.

Be sure to follow the child safety seat manufacturer's instructions.

To gain access to the anchoring bolt, cut through the U-shaped tether location outlines on the carpet of the luggage area. Remove the bolt that is currently in the anchor location.

Tighten the anchor according to specifications. Otherwise, the safety seat may not be properly secured and the child may be injured in a sudden stop or collision.

To properly use child safety tethers in the 3rd row seat position, REMOVE THE PARCEL SHELF and tether child safety seat to the tether anchor located on the floor behind the 3rd row seat.

Seating and safety restraints

Third row bench in second row position

To attach a tether strap to a lap/shoulder belt:

1. Route the tether strap under the head restraint and between the head restraint supports.
2. Hook the tether strap hook into the large hole at the end of the seat belt tongue of the lap/shoulder belt directly behind the child seat position.

3. Adjust the tether strap length until the hook is about one foot behind the seatback.
4. Pull the shoulder belt until all of the belt is fully extended and a click is heard. At this time the belt is in automatic locking mode (child restraint mode).
5. Let the retractor wind up the slack from the lap/shoulder belt. A clicking sound should be heard as the belt retracts, indicating that the retractor is in automatic locking mode. Tighten the tether strap to remove any slack.
6. Before placing a child in the child restraint, use force to tilt the child restraint from side to side and tug it forward to make sure it is securely held in place.
7. Check that the retractor is in automatic locking mode by trying to pull more belt out of the retractor. If you cannot pull any more belt webbing out of the retractor, the belt is in automatic locking mode.
8. Check to make sure the child restraint is properly secured prior to each use. If the belt is not locked, repeat steps 4 through 7.

For additional important safety information on the proper use of seatbelts, child seats and infant seats, please read the entire *Seating and safety restraints* chapter in this owner's guide.

Seating and safety restraints

BUILT-IN CHILD SEATS

Built-in child safety seat (if equipped)

The 2nd row seat may include a built-in child seat. This child seat conforms to all Federal and local motor vehicle safety standards. Read the labels located on the child seat cushion for information on the built-in child seat.

Use the built-in child seat **only** if the child is at least 1 year old, weighs 10–27 kg (22–60 lb) and the child's shoulders (top) are below the shoulder harness slots in the built-in child seat.

Children not meeting these requirements should be secured in an approved aftermarket seat. Refer to *Child and infant or child safety seats* in this chapter.

Built-in child seat retractors

The belts on built-in child seats are equipped with a retractor that locks when both tongues are latched into the crotch safety belt buckle. The retractor will automatically snug the belts around the child. If the belts do not remain snug, take the vehicle to the dealer for child seat repair. The belts will not snug during a collision.

Placing your child in the built-in child seat

Failure to follow all of the instructions on the use of this child restraint system can result in your child striking the vehicle's interior during a sudden stop or crash.

Never use the Built-In Child Seat as a booster cushion with the adult safety belts. A child using the adult belts could slide forward and out from under the safety belts.

The rear seatback must be fully locked before operating the child restraint system.

Seating and safety restraints

1. Pull the release strap near the bottom of the seatback.

2. Grasp the child seat at the top of the seatback and pull the top forward to release the latch.

3. Continue to unfold the child seat until it rests on the seat.

Seating and safety restraints

4. Read all information and warnings on the child seat cushion and shoulder safety belt. The child seat is to be used only by children who:

- are at least one year old
- weigh between 10 and 27 kg (22 and 60 lbs.)
- shoulders must be below the shoulder harness slots

5. If connected, squeeze the top and the bottom of the right half of the chest clip and pull to separate both halves and unbuckle the two safety belt tongues from the crotch belt buckle.

6. Place the child on the child seat and position the shoulder belts over each shoulder.

7. Insert either the left or the right safety belt tongue into the single opening of the crotch safety belt buckle (it doesn't matter which tongue is inserted first). Insert other tongue. The color green must appear in the indicator window on the crotch safety belt buckle when buckled. Allow belts to retract and fit snugly.

8. Fasten both halves of the chest clip below the child's shoulders and adjust it to comfortably hold the shoulder belts in place on the child's chest. The color green must appear in the indicator window when fastened.

9. Pull the shoulder belts toward you to make sure the crotch safety belt buckle is properly fastened and the retractor is locked.

Seating and safety restraints

10. Pull the right shoulder belt fully out to put the retractor into the automatic locking mode.
11. If the belts become too tight, unbuckle the crotch safety belt buckle to unlock the retractors, then reinsert both belt tongues.

Removing your child from the built-in child seat

1. Squeeze the tabs on the top and the bottom of the chest clip and pull the halves apart to open the chest clip.
2. Press the release button on the crotch safety belt buckle.
3. Slide the shoulder belts off the child's shoulders and remove the child.

To stow the built-in child seat

Return the child seat cushion to the upright position, then press firmly in the center and top of the child seat.

Inspecting the built-in child seat after a collision

Inspect all built-in child restraints, including seats, buckles, retractors, and seat latches. Interlocks and attaching hardware should be inspected by a qualified technician after any collision. If the child seat was in use during a collision, Ford recommends replacing it. Built-in child restraints not in use during a collision should be inspected and replaced if either damage or improper operation is noted.

Starting

PREPARING TO START YOUR VEHICLE

Engine starting is controlled by the ignition system. This system meets all Canadian Interference-Causing Equipment standard requirements regulating the impulse electrical field strength of radio noise.

When starting a fuel-injected engine, avoid pressing the accelerator before or during starting. Only use the accelerator when you have difficulty starting the engine. For more information on starting the vehicle, refer to *Starting the engine* in this chapter.

Extended idling at high engine speeds can produce very high temperatures in the engine and exhaust system, creating the risk of fire or other damage.

Do not park, idle, or drive your vehicle in dry grass or other dry ground cover. The emission system heats up the engine compartment and exhaust system, which can start a fire.

Do not start your vehicle in a closed garage or in other enclosed areas. Exhaust fumes can be toxic. Always open the garage door before you start the engine. See *Guarding against exhaust fumes* in this chapter for more instructions.

If you smell exhaust fumes inside your vehicle, have your dealer inspect your vehicle immediately. Do not drive if you smell exhaust fumes.

Important safety precautions

A computer system controls the engine's idle revolutions per minute (RPM). When the engine starts, the idle RPM runs faster to warm the engine. If the engine idle speed does not slow down automatically, have the vehicle checked. Do not allow the vehicle to idle for more than ten minutes at the higher engine RPM.

Before starting the vehicle:

1. Make sure all vehicle occupants have buckled their safety belts. For more information on safety belts and their proper usage, refer to the *Seating and safety restraints* chapter.

Starting

2. Make sure the headlamps and vehicle accessories are off.
3. Make sure the parking brake is set.

4. Make sure the gearshift is in P (Park).

5. Turn the key to 3 (ON) without turning the key to 4 (START).

If there is difficulty in turning the key, firmly rotate the steering wheel left and right until the key turns freely. This condition may occur when:

- front wheels are turned
- front wheel is against the curb
- steering wheel is turned when getting in or out of the vehicle

Starting

Make sure the corresponding lights illuminate briefly. If a light fails to illuminate, have the vehicle serviced.

- If the driver's safety belt is fastened, the  light may not illuminate.

STARTING THE ENGINE

1. Turn the key to 4 (START) without pressing the accelerator pedal and release as soon as the engine starts. The key will return to 3 (ON).

2. If the temperature is above -12°C (10°F) and the engine does not start within five seconds on the first try, turn the key to OFF, wait ten seconds and try again.
3. If the temperature is below -12°C (10°F) and the engine does not start in fifteen seconds on the first try, turn the key OFF and wait ten seconds and try again. If the engine does not start in two attempts, Press the accelerator pedal $1/3$ to $1/2$ of the way to floor and hold. Turn the key to START position.
4. When the engine starts, release the key, then release the accelerator pedal gradually as the engine speeds up.
5. After idling for a few seconds, apply the brake and release the parking brake.

Starting

Using the engine block heater (if equipped)

An engine block heater warms the engine coolant, which improves starting, warms up the engine faster and allows the heater-defroster system to respond quickly. Use of an engine block heater is strongly recommended if you live in a region where temperatures reach -23°C (-10°F) or below.

For best results, plug the heater in at least three hours before starting the vehicle. Using the heater for longer than three hours will not harm the engine, so the heater can be plugged in the night before starting the vehicle.

To prevent electrical shock, do not use your heater with ungrounded electrical systems or two-pronged (cheater) adapters.

Guarding against exhaust fumes

Although odorless and colorless, carbon monoxide is present in exhaust fumes. Take precautions to avoid its dangerous effects.

If you ever smell exhaust fumes of any kind inside your vehicle, have your dealer inspect and fix your vehicle immediately. Do not drive if you smell exhaust fumes. These fumes are harmful and could kill you.

Have the exhaust and body ventilation systems checked whenever:

- the vehicle is raised for service.
- the sound of the exhaust system changes.
- the vehicle has been damaged in a collision.

Engine exhaust, some of its constituents, and certain vehicle components contain or emit chemicals known to the State of California to cause cancer, and birth defects or other reproductive harm.

Starting

Important ventilating information

If the engine is idling while the vehicle is stopped in an open area for long periods of time, open the windows at least 2.5 cm (one inch).

Adjust the heating or air conditioning to bring in fresh air.

Improve vehicle ventilation by keeping all air inlet vents clear of snow, leaves and other debris.

BRAKES

Your service brakes are self-adjusting. Refer to the scheduled maintenance guide for scheduled maintenance.

Occasional brake noise is normal and often does not indicate a performance concern with the vehicle's brake system. In normal operation, automotive brake systems may emit occasional or intermittent squeal or groan noises when the brakes are applied. Such noises are usually heard during the first few brake applications in the morning; however, they may be heard at any time while braking and can be aggravated by environmental conditions such as cold, heat, moisture, road dust, salt or mud. If a "metal-to-metal," "continuous grinding" or "continuous squeal" sound is present while braking, the brake linings may be worn-out and should be inspected by a qualified service technician.

Anti-lock brake system (ABS) (if equipped)

On vehicles equipped with an anti-lock braking system (ABS), a noise from the hydraulic pump motor and pulsation in the pedal may be observed during ABS braking events. Pedal pulsation coupled with noise while braking under panic conditions or on loose gravel, bumps, wet or snowy roads is normal and indicates proper functioning of the vehicle's anti-lock brake system. The ABS performs a self-check at approximately 17 km/h (10 mph) after you start the engine and begin to drive away. A brief mechanical noise may be heard during this test. This is normal. If a malfunction is found, the ABS warning light will come on. If the vehicle has continuous vibration or shudder in the steering wheel while braking, the vehicle should be inspected by a qualified service technician.

The ABS operates by detecting the onset of wheel lockup during brake applications and compensates for this tendency. The wheels are prevented from locking even when the brakes are firmly applied. The accompanying illustration depicts the advantage of an ABS equipped vehicle (on bottom) to a non-ABS equipped vehicle (on top) during hard braking with loss of front braking traction.

Driving

ABS warning lamp

The (ABS) warning lamp in the instrument cluster momentarily illuminates when the ignition is turned to the ON position. If the light does not illuminate momentarily at start up, remains on or continues to flash, the ABS needs to be serviced.

With the ABS light on, the anti-lock brake system is disabled and normal braking is still effective unless the brake warning light also remains illuminated with parking brake released. (If your brake warning lamp illuminates, have your vehicle serviced immediately).

Using ABS

- In an emergency or when maximum efficiency from the ABS is required, apply continuous full force on the brake. The ABS will be activated immediately, thus allowing you to retain full steering control of your vehicle and, providing there is sufficient space, will enable you to avoid obstacles and bring the vehicle to a controlled stop.
- The Anti-Lock system does not decrease the time necessary to apply the brakes or always reduce stopping distance. Always leave enough room between your vehicle and the vehicle in front of you to stop.
- We recommend that you familiarize yourself with this braking technique. However, avoid taking any unnecessary risks.

Parking brake

Apply the parking brake whenever the vehicle is parked. To set the parking brake, press the parking brake pedal down until the pedal stops.

The BRAKE warning lamp in the instrument cluster illuminates and remains illuminated (when the ignition is turned ON) until the parking brake is released.

Always set the parking brake fully and make sure that the gearshift is securely latched in P (Park).

The parking brake is not recommended to stop a moving vehicle. However, if the normal brakes fail, the parking brake can be used to stop your vehicle in an emergency. Since the parking brake applies only the rear brakes, the vehicle's stopping distance will increase greatly and the handling of your vehicle will be adversely affected.

Push the pedal downward again to release the parking brake. Driving with the parking brake on will cause the brakes to wear out quickly and reduce fuel economy.

STEERING

Your vehicle is equipped with power steering. Power steering uses energy from the engine to help steer the vehicle.

To prevent damage to the power steering pump:

- Never hold the steering wheel to the extreme right or the extreme left for more than a few seconds when the engine is running.
- Do not operate the vehicle with a low power steering pump fluid level.

If the power steering system breaks down (or if the engine is turned off), you can steer the vehicle manually, but it takes more effort.

If the steering wanders or pulls, the condition could be caused by any of the following:

- underinflated tire(s) on any wheel(s)

Driving

- high crown in center of road
- high crosswinds
- wheels out of alignment
- loose or worn components in steering linkage

AUTOMATIC TRANSAXLE OPERATION

Brake-shift interlock

This vehicle is equipped with a brake-shift interlock feature that prevents the gearshift lever from being moved from P (Park) unless the brake pedal is depressed.

If you cannot move the gearshift lever out of P (Park) with the brake pedal depressed:

1. Apply the parking brake, turn ignition key to OFF/LOCK, then remove the key.
2. Insert the key and turn it to ACC. Apply the brake pedal and shift to N (Neutral).
3. Start the vehicle.

Do not drive your vehicle until you verify that the brakelamps are working.

If your vehicle gets stuck in mud or snow it may be rocked out by shifting from forward and reverse gears, stopping between shifts, in a steady pattern. Press lightly on the accelerator in each gear.

Do not rock the vehicle for more than a few minutes. The transmission and tires may be damaged or the engine may overheat.

Always set the parking brake fully and make sure the gearshift is latched in P (Park). Turn off the ignition whenever you leave your vehicle.

If the parking brake is fully released, but the brake warning lamp remains illuminated, the brakes may not be working properly. See your dealer or a qualified service technician.

Understanding gearshift positions

To account for customer driving habits and conditions, your automatic transaxle electronically controls the shift feel by using an adaptive learning strategy. During the first few hundred kilometers (miles) of operation, it is normal for your transaxle to have abrupt shifts. The adaptive learning strategy is maintained by power from the battery. When the battery is disconnected or a new battery is installed, the transaxle must relearn its adaptive strategy. Optimal shifting will resume within a few hundred kilometers (miles) of operation.

P (Park)

Always come to a complete stop before shifting into P (Park). Make sure the gearshift is securely latched in P (Park). This locks the transaxle and prevents the front wheels from rotating.

Always set the parking brake fully and make sure the gearshift is securely latched in P (Park).

Never leave your vehicle unattended while it is running.

R (Reverse)

With the gearshift in R (Reverse), the vehicle will move backward. You should always come to a complete stop before shifting into and out of R (Reverse).

N (Neutral)

With the gearshift in the N (Neutral) position, the vehicle can be started and is free to roll. Hold the brake pedal down while in this position.

Overdrive — column mounted gearshift with O/D off switch

The Overdrive position with the O/D OFF switch **not** depressed is the normal driving position for this

Driving

automatic overdrive transaxle. When your vehicle cruises at a constant speed for any length of time, this fourth gear will increase your fuel economy.

Overdrive may not be appropriate for certain terrains. If the transaxle shifts back and forth between third and fourth gears while you are driving hilly roads or if your vehicle requires additional power for climbing hills, press the O/D OFF switch. Each time the vehicle is started, the transaxle will automatically return to normal overdrive mode.

If your vehicle is on an extremely slippery surface, the Transaxle Control Module may receive a signal indicating a rapid increase or decrease in wheel speed. When the module detects this condition, it will limit the transaxle operation to Third and Reverse gears. This reduces tire slippage and protects the transaxle. The transaxle will operate normally in Reverse, but will lack power during acceleration in Drive.

If this happens;

1. Stop your vehicle as soon as possible.
2. Turn the ignition off for three seconds.
3. Restart the vehicle.

If the condition still exists, contact your dealer as soon as possible.

If the O/D OFF indicator light is flashing on and off repeatedly when the vehicle is started or does not come on when the O/D OFF control is pressed, there may be a transaxle electronic system malfunction. You should contact your dealer as soon as possible or damage to the transaxle could occur.

When to use D (Drive) or press the O/D OFF switch

You will notice that there is only one drive position on your gearshift indicator (instead of Drive and Overdrive). However, you will find a control labeled OVERDRIVE located on the gearshift lever. Push in the switch and the O/D OFF light in the instrument cluster will illuminate.

With the O/D OFF light illuminated, the transaxle will operate in first,

Driving

second and third gears and will not shift into fourth gear. Operating in D (O/D OFF) provides more engine braking than Overdrive for descending hills or city driving.

To return the transaxle to the normal Overdrive operation, press the O/D OFF control again. Use this control to select between Overdrive or D (O/D OFF) whenever you drive your vehicle.

If the O/D OFF indicator light is flashing on and off repeatedly when the vehicle is started or does not come on when the O/D OFF control is pressed, there may be a transaxle electronic system malfunction. You should contact your dealer as soon as possible or damage to the transaxle could occur.

2 (Second)

Use 2 (Second) for start-up on slippery roads or to give you more engine braking to slow your vehicle on downgrades.

Do not go faster than 108 km/h (68 mph) when in this gear. You can upshift from 2 (Second) to overdrive at any time.

1 (First)

Use 1 (First) for when added engine braking is desired when descending steep hills.

The automatic transaxle will shift to the proper gear to ascend any grade without any need to shift to 1 (First).

Do not go faster than 56 km/h (35 mph) when in this gear. You can upshift from 1 (First) to overdrive at any time.

When parking, do not use the gearshift in place of the parking brake. Always set the parking brake fully and make sure that the gearshift is securely latched in Park (P). Turn off the ignition whenever you leave your vehicle. Never leave your vehicle unattended while it is running. If you do not take these precautions, your vehicle may move unexpectedly and injure someone.

Driving

Driving with an automatic overdrive transaxle

Your automatic transaxle electronically controls the shift feel by using an adaptive learning strategy. This feature is designed to optimize shift smoothness. It is normal for your transaxle to shift firmly during the first few hundred kilometers (miles) of operation until the adaptive strategy has been learned. The adaptive learning strategy is maintained by power from the battery. When the battery is disconnected or a new battery is installed, the transaxle must relearn its adaptive strategy. Optimal shifting will resume within a few hundred kilometers (miles) of operation.

Your automatic overdrive transaxle provides fully automatic operation in either D (Overdrive) or with the O/D OFF switch depressed. Driving with the gearshift lever in D

(Overdrive) gives the best fuel economy for normal driving conditions.

For manual control, start in 1 (First) and then shift manually.

To put your vehicle in gear, start the engine, depress the brake pedal, then move gearshift lever out of P (Park).

DRIVING THROUGH WATER

Do not drive quickly through standing water, especially if the depth is unknown. Traction or brake capability may be limited and if the ignition system gets wet, your engine may stall. Water may also enter your engine's air intake and severely damage your engine.

If driving through deep or standing water is unavoidable, proceed very slowly. Never drive through water that is higher than the bottom of the hubs.

Once through the water, always try the brakes. Wet brakes do not stop the vehicle as effectively as dry brakes. Drying can be improved by moving your vehicle slowly while applying light pressure on the brake pedal.

Driving through deep water where the transaxle is submerged may allow water into the transaxle and cause internal transmission damage.

VEHICLE LOADING

Before loading a vehicle, familiarize yourself with the following terms:

- **Base Curb Weight** : Weight of the vehicle including any standard equipment, fluids, lubricants, etc. It does not include passengers or aftermarket equipment.
- **Payload** : Combined maximum allowable weight of cargo, passengers and optional equipment. The payload equals the gross vehicle weight rating minus base curb weight.
- **GVW (Gross Vehicle Weight)** : Base curb weight plus payload weight. The GVW is not a limit or a specification.
- **GVWR (Gross Vehicle Weight Rating)** : Maximum total weight of the base vehicle, passengers, optional equipment and cargo. The GVWR is specific to each vehicle and is listed on the Safety Compliance Label on the driver's door pillar.
- **GAWR (Gross Axle Weight Rating)** : Carrying capacity for each axle system. The GAWR is specific to each vehicle and is listed on the Safety Compliance Label on the driver's door pillar.
- **GCWR (Gross Combined Weight Rating)** : Maximum combined weight of towing vehicle (including passengers and cargo) and the trailer. The GCWR indicates the maximum loaded weight that the vehicle is designed to tow.
- **Maximum Trailer Weight Rating** : Maximum weight of a trailer the vehicle is permitted to tow. The maximum trailer weight rating is determined by subtracting the vehicle curb weight for each engine/transmission combination, any required option weight for trailer towing and the weight of the driver from the GCWR for the towing vehicle.
- **Maximum Trailer Weight** : maximum weight of a trailer the loaded vehicle (including passengers and cargo) is permitted to tow. It is determined by subtracting the weight of the loaded trailer towing vehicle from the GCWR for the towing vehicle.
- **Trailer Weight Range** : Specified weight range that the trailer must fall within that ranges from zero to the maximum trailer weight rating.

Do not exceed the GVWR or the GAWR specified on the certification label.

Driving

Do not use replacement tires with lower load carrying capacities than the originals because they may lower the vehicle's GVWR and GAWR limitations. Replacement tires with a higher limit than the originals do not increase the GVWR and GAWR limitations.

The Certification Label, found on the inside pillar of the driver's door, lists several important vehicle weight rating limitations. Before adding any additional equipment, refer to these limitations. If you are adding weight to the front of your vehicle, (potentially including weight added to the cab), the weight added should not exceed the Front Axle Reserve Capacity (FARC). Additional frontal weight may be added to the front axle reserve capacity provided you limit your payload in other ways (i.e. restrict the number of passengers or amount of cargo carried).

You may add equipment throughout your vehicle if the total weight added is equal to or less than the Total Axle Reserve Capacity (TARC) weight. You should NEVER exceed the Total Axle Reserve Capacity.

Always ensure that the weight of passengers, cargo and equipment being carried is within the weight limitations that have been established for your vehicle including both Gross Vehicle Weight and Front and Rear Gross Axle Weight Rating limits. Under no circumstance should these limitations be exceeded. Exceeding any vehicle weight rating limitation could result in serious damage to the vehicle and/or personal injury.

TRAILER TOWING

The trailer towing table shows the maximum allowable maximum GCWR and trailer weight.

Maximum GCWR	Trailer weight range (0 - maximum)
3 628 kg (8 000 lbs.)	0-1 588 kg (0-3 500 lbs.)

Do not exceed the GVWR or the GAWR specified on the certification label.

Towing trailers beyond the maximum recommended gross trailer weight could result in engine damage, transmission/axle damage, structural damage, loss of control, and personal injury.

The optional Trailer Tow Prep Package is recommended for towing of any trailer since it provides a heavy duty battery, conventional size spare tire and wiring.

Trailer towing puts additional loads on your vehicle's engine, transmission, axle, brakes, tires, and suspension. For your safety and to maximize vehicle performance, be sure to use the proper equipment while towing.

Follow these guidelines to ensure safe towing procedure:

- Stay within your vehicle's load limits. If exceeded, cargo should be removed from the trailer and/or the vehicle until all weights are within specified limits.
- Thoroughly prepare your vehicle for towing. Refer to *Preparing to tow* in this chapter.
- Use extra caution when driving while trailer towing. Refer to *Driving while you tow* in this chapter.
- Service your vehicle more frequently if you tow a trailer. Refer to the severe duty schedule in the Scheduled Maintenance Guide.
- Do not tow a trailer until your vehicle has been driven at least 800 km (500 miles).
- Refer to the instructions included with towing accessories for the proper installation and adjustment specifications.

Trailer Tow Prep Package (if equipped)

The trailer tow prep package on your vehicle (if equipped) includes:

- Heavy duty battery
- Conventional size spare tire
- Trailer tow module and jumper harness

Using the jumper harness (if equipped)

- Remove the connector cap from the vehicle harness located behind the rear bumper. Store the connector cap in the glove box for reinstallation.
- Connect the tow harness to the vehicle harness located behind the rear bumper.
- Connect the tow harness connector (SAE J1239) to your trailer.
- Confirm the proper vehicle and trailer stop/turn lamp operation.

Driving

Preparing to tow

Use the proper equipment for towing a trailer, and make sure it is properly attached to your vehicle. See your dealer or a reliable trailer dealer if you require assistance.

Hitches

For towing trailers up to 907 kg (2 000 lb), use a weight carrying hitch and ball which uniformly distributes the trailer tongue load through the underbody structure. For towing trailers up to 1 588 kg (3 500 lb) use a frame-mounted weight distributing hitch which transfers a portion of the trailer tongue load to the front axle system.

Do not install a single or multi-clamp type bumper hitch, or a hitch which attaches to the axle. Follow the towing instructions of a reputable rental agency.

Whenever a trailer hitch and hardware are removed, make sure all mounting holes in the underbody are properly sealed to prevent noxious gases or water from entering.

Safety chains

Always connect the trailer's safety chains to the frame or hook retainers of the vehicle. To connect the trailer's safety chains, cross the chains under the trailer tongue and allow slack for turning corners.

If you use a rental trailer, follow the instructions that the rental agency gives to you.

Do not attach safety chains to the bumper.

Trailer brakes

Electric brakes and manual, automatic or surge-type brakes are safe if installed properly and adjusted to the manufacturer's specifications. The trailer brakes must meet local and Federal regulations.

Do not connect a trailer's hydraulic brake system directly to your vehicle's brake system. Your vehicle may not have enough braking power and your chances of having a collision greatly increase.

The braking system of the tow vehicle is rated for operation at the GVWR not GCWR.

Trailer lamps

Trailer lamps are required on most towed vehicles. Make sure your trailer lamps conform to local and Federal regulations. See your dealer or trailer rental agency for proper instructions and equipment for hooking up trailer lamps.

Driving while you tow

Do not drive faster than 88 km/h (55 mph) when towing a trailer.

Speed control may shut off if you are towing on long, steep grades.

When towing a trailer:

- Use a lower gear when towing up or down steep hills. This will eliminate excessive downshifting and upshifting for optimum fuel economy and transaxle cooling.
- Anticipate stops and brake gradually.

Exceeding the GCWR rating may cause internal transaxle damage and void your warranty coverage.

Servicing after towing

If you tow a trailer for long distances, your vehicle will require more frequent service intervals. Refer to your Scheduled Maintenance Guide for more information.

Trailer towing tips

- Practice turning, stopping and backing up in an area before starting on a trip to get the feel of the vehicle trailer combination. When turning, make wider turns so the trailer wheels will clear curbs and other obstacles.
- Allow more distance for stopping with a trailer attached.
- The trailer tongue weight should be 10% of the loaded trailer weight.
- After you have traveled 80 km (50 miles), thoroughly check your hitch, electrical connections and trailer wheel lug nuts.
- When stopped in traffic for long periods of time in hot weather, place the gearshift in P (Park) and increase idle speed. This aids engine cooling and air conditioner efficiency.
- Vehicles with trailers should not be parked on a grade. If you must park on a grade, place wheel chocks under the trailer's wheels.

Driving

LUGGAGE RACK

The front and rear crossbar can be adjusted to fit the item being carried. Do not load more than 44 kg (100 lbs.) on the luggage rack.

To adjust cross-bar position:

1. Loosen the thumbwheel at both ends of the cross-bar.
2. Slide the cross-bar to the desired location.
3. Tighten the thumbwheel at both ends of the cross-bar.

Use adjustable tie down loops to secure the load.

Roadside emergencies

HAZARD FLASHER

Use only in an emergency to warn traffic of vehicle breakdown, approaching danger, etc. The hazard flashers can be operated when the ignition is off.

- The hazard lights control is located on the instrument panel.
- Depress hazard lights control to activate all hazard flashers simultaneously.
- Depress control again to turn the flashers off.

RESETTING THE FUEL PUMP SHUT-OFF SWITCH

After a collision, if the engine cranks but does not start, the fuel pump shut-off switch may have been activated. The shut-off switch is a device intended to stop the electric fuel pump when your vehicle has been involved in a substantial jolt.

Roadside emergencies

The fuel pump shut-off switch is located in the driver's foot well, behind the kick panel. The reset button for the fuel pump shut-off switch is accessible through an opening in the kick panel.

Use the following procedure to reset the fuel pump shut-off switch.

1. Turn the ignition to the OFF position.
2. Check the fuel system for leaks.
3. If no fuel leak is apparent, reset the fuel pump shut-off switch by pushing in on the reset button.
4. Turn the ignition to the RUN position. Pause for a few seconds and return the key to the OFF position.
5. Make a further check for leaks in the fuel system.

FUSES AND RELAYS

Fuses

If electrical components in the vehicle are not working, a fuse may have blown. Blown fuses are identified by a broken wire within the fuse. Check the appropriate fuses before replacing any electrical components.

Always replace a fuse with one that has the specified amperage rating. Using a fuse with a higher amperage rating can cause severe wire damage and could start a fire.

Roadside emergencies

Standard fuse amperage rating and color

COLOR

Passenger compartment fuse panel

The fuse panel is located below and to the left of the steering wheel by the brake pedal. Remove the panel cover to access the fuses.

To remove a fuse use the fuse puller tool provided on the fuse panel cover.

Power distribution box

The power distribution box is located in the engine compartment. The power distribution box contains high-current fuses that protect your vehicle's main electrical systems from overloads.

Always disconnect the battery before servicing high current fuses.

Always replace the cover to the Power Distribution Box before reconnecting the battery or refilling fluid reservoirs.

If the battery has been disconnected and reconnected, refer to the *Battery* section of the *Maintenance and Care* chapter.

Roadside emergencies

* Mini Fuses ** Maxi Fuses		

Roadside emergencies

Relay box

The relay box is located in the engine compartment in front of the battery.

1	2	3	4		
			5	6	7

The relays are coded as follows:

Relay location	Description
1	Start Inhibit Relay
2	Fuel Pump Relay
3	Bulb Check Relay
4	Speed Control Hold Relay
5	Anti-theft Relay
6	Horn Relay
7	A/C Relay

CHANGING THE TIRES

If you get a flat tire while driving, do not apply the brake heavily. Instead, gradually decrease your speed. Hold the steering wheel firmly and slowly move to a safe place on the side of the road.

Roadside emergencies

Temporary spare tire information

Your vehicle may have a temporary or conventional size spare tire. The temporary spare tire for your vehicle is labeled as such. It is smaller than a regular tire and is designed for emergency use only. Replace this tire with a full-size tire as soon as possible.

If you use the temporary spare tire continuously or do not follow these precautions, the tire could fail, causing you to lose control of the vehicle, possibly injuring yourself or others.

When driving with the temporary spare tire **do not**:

- exceed 80 km/h (50 mph) under any circumstances
- load the vehicle beyond maximum vehicle load rating listed on the Safety Compliance Label
- tow a trailer
- use tire chains
- drive through an automatic car wash, because of the vehicle's reduced ground clearance
- try to repair the temporary spare tire or remove it from its wheel
- use the wheel for any other type of vehicle

Location of the spare tire and tools

The spare tire and tools for your vehicle are stowed in the following locations:

Item	Location
Spare tire	Under the vehicle, just forward of the rear bumper
Jack assembly	Under the third row bench seat in the tool bag

Removing the jack and tools

1. Lift the 3rd row seat cushion.
2. Remove the jack assembly from the bag under the seat.

Roadside emergencies

Removing the spare tire

1. Open the liftgate, locate the U-shaped slits in the carpet, and flip up the piece of carpet to expose the hex nut.
2. Insert the lug nut wrench on the hex nut in cargo floor.

3. Turn the wrench counterclockwise until tire is lowered to the ground and the cable is slightly slack.
4. Remove the retainer from the spare tire. It may be necessary to lift one end of the tire to disengage the retainer.

Roadside emergencies

Stowing the spare

1. Lay the tire on the ground with the interior side facing up.
2. Install the retainer through the wheel center and slide the wheel under the vehicle.
3. Turn the wrench clockwise until the tire is raised to its original position underneath the vehicle. The hex nut ratchets when the tire is raised to the stowed position. It will not allow you to overtighten.
4. Check seating position of tire for looseness against the underbody supports and retighten if necessary.

 Ensure the position of the tire is not too far forward to avoid contact with the axle.

Tire change procedure

 When one of the front wheels is off the ground, the transaxle alone will not prevent the vehicle from moving or slipping off the jack, even if the vehicle is in P (Park).

 To prevent the vehicle from moving when you change a tire, be sure the parking brake is set, then block (in both directions) the wheel that is diagonally opposite (other side and end of the vehicle) to the tire being changed.

 If the vehicle slips off the jack, you or someone else could be seriously injured.

 All occupants should be out of the vehicle while it is on the jack.

Roadside emergencies

1. Park on a level surface, activate hazard flashers and set parking brake.

2. Place gearshift lever in P (Park), turn engine OFF, and block the diagonally opposite wheel.

3. Remove the spare tire and jack assembly.

4. Remove the center ornament or wheel cover from the wheel with the tapered end of the jack handle that came with your vehicle. Insert and twist the handle, then pry against the wheel.

5. Loosen each wheel lug nut one-half turn counterclockwise but do not remove them until the wheel is raised off the ground.

Roadside emergencies

Jacking notches are located approximately six inches rearward of the front wheels and twelve inches forward of the rear wheels.

6. Locate the jack notch closest to the tire you are changing, then place the jack on the frame rail directly behind the notch.

7. Turn the jack handle clockwise until the wheel is completely off the ground.

 To lessen the risk of personal injury, do not put any part of your body under the vehicle while changing a tire. Do not start the engine when your vehicle is on the jack. The jack is only meant for changing the tire.

8. Remove the lug nuts with the lug wrench.

9. Replace the flat tire with the spare tire, making sure the valve stem is facing outward. Reinstall lug nuts until the wheel is snug against the hub. Do not fully tighten the lug nuts until the wheel has been lowered.

10. Lower the wheel by turning the jack handle counterclockwise.

11. Remove the jack and fully tighten the lug nuts in the order shown.

12. Install wheel cover or center ornament on wheel.

13. Put jack assembly away in the proper location.

Store flat tire under the vehicle. Refer to *Stowing the spare tire* in this chapter.

Roadside emergencies

JUMP STARTING YOUR VEHICLE

The gases around the battery can explode if exposed to flames, sparks, or lit cigarettes. An explosion could result in injury or vehicle damage.

Do not push start your vehicle. You could damage the catalytic converter.

Batteries contain sulfuric acid which can burn skin, eyes, and clothing, if contacted.

Do not attempt to push start your vehicle. Automatic transmissions do not have push-start capability.

Preparing your vehicle

1. Use **only a 12-volt supply to start your vehicle.**
2. Do not disconnect the battery of the disabled vehicle as this could damage the vehicle's electrical system.
3. Park the booster vehicle close to the hood of the disabled vehicle making sure the two vehicles **do not** touch. Set the parking brake on both vehicles and stay clear of the engine cooling fan and other moving parts.
4. Check all battery terminals and remove any excessive corrosion before you attach the battery cables. Ensure that vent caps are tight and level.
5. Turn the heater fan on in both vehicles to protect any electrical surges. Turn all other accessories off.

Roadside emergencies

Connecting the jumper cables

1. Connect the positive (+) booster cable to the positive (+) terminal of the discharged battery.

Note: In the illustrations, *lightning bolts* are used to designate the assisting (boosting) battery.

2. Connect the other end of the positive (+) cable to the positive (+) terminal of the assisting battery.

Roadside emergencies

3. Connect the negative (-) cable to the negative (-) terminal of the assisting battery.

4. Make the final connection of the negative (-) cable to an exposed metal part of the stalled vehicle's engine, away from the battery and the carburetor/fuel injection system.

The preferred locations of an exposed metal part (to *ground* the circuit) are the alternator mounting brackets or an engine lifting *eye*. **Do not** use fuel lines, engine rocker covers or the intake manifold as *grounding* points.

Do not connect the end of the second cable to the negative (-) terminal of the battery to be jumped. A spark may cause an explosion of the gases that surround the battery.

5. Ensure that the cables are clear of fan blades, belts, moving parts of both engines, or any fuel delivery system parts.

Roadside emergencies

Jump starting

1. Start the engine of the booster vehicle and run the engine at moderately increased speed.
2. Start the engine of the disabled vehicle.
3. Once the disabled vehicle has been started, run both engines for an additional three minutes before disconnecting the jumper cables.

Removing the jumper cables

Remove the jumper cables in the reverse order that they were connected.

1. Remove the jumper cable from the *ground* metal surface.

2. Remove the jumper cable on the negative (-) connection of the booster vehicle's battery.

Roadside emergencies

3. Remove the jumper cable from the positive (+) terminal of the booster vehicle's battery.

4. Remove the jumper cable from the positive (+) terminal of the disabled vehicle's battery.

After the disabled vehicle has been started and the jumper cables removed, allow it to idle for several minutes so the engine computer can *relearn* its idle conditions.

Roadside emergencies

WRECKER TOWING

If you need to have your vehicle towed, contact a professional towing service or, if you are a member, your roadside assistance center.

It is recommended that your vehicle be towed with a wheel lift or flatbed equipment. Do not tow with a slingbelt. Ford Motor Company has not approved a slingbelt towing procedure.

If your vehicle is to be towed from the rear using wheel lift equipment, the front wheels (drive wheels) must be placed on a dolly to prevent damage to the transmission.

Ford Motor Company provides a towing manual for all authorized tow truck operators. Have your tow truck operator refer to this manual for proper hook-up and towing procedures for your vehicle.

Maintenance and care

SERVICE RECOMMENDATIONS

To help you service your vehicle:

- We highlight do-it-yourself items in the engine compartment for easy location.
- We provide a Scheduled Maintenance Guide which makes tracking routine service easy.

If your vehicle requires professional service, your dealership can provide necessary parts and service. Check your “Warranty Guide” to find out which parts and services are covered.

Use only recommended fuels, lubricants, fluids and service parts conforming to specifications. Motorcraft parts are designed and built to provide the best performance in your vehicle.

PRECAUTIONS WHEN SERVICING YOUR VEHICLE

Be especially careful when inspecting or servicing your vehicle.

- Do not work on a hot engine.
- When the engine is running, make sure that loose clothing, jewelry or long hair does not get caught up in moving parts.
- Do not work on a vehicle with the engine running in an enclosed space, unless you are sure you have enough ventilation.
- Keep all lit cigarettes, open flames and other lit material away from the battery and all fuel related parts.

If you disconnect the battery, the engine must “relearn” its idle conditions before your vehicle will drive properly, as explained in *Battery* in this chapter.

Working with the engine off

1. Set the parking brake and ensure the gearshift is securely latched in P (Park).
2. Turn off the engine and remove the key.
3. Block the wheels to prevent the vehicle from moving unexpectedly.

Working with the engine on

1. Set the parking brake and ensure the gearshift is securely latched in P (Park).
2. Block the wheels to prevent the vehicle from moving unexpectedly.

Maintenance and care

Do not start your engine with the air cleaner removed and do not remove it while the engine is running.

OPENING THE HOOD

1. Inside the vehicle, pull the hood release handle located under the bottom left corner of the instrument panel.

2. Go to the front of the vehicle and release the auxiliary latch that is located under the front center of the hood.

3. Lift the hood and secure it with the prop rod.

Maintenance and care

IDENTIFYING COMPONENTS IN THE ENGINE COMPARTMENT

3.3L V6 engine

1. Power distribution box
2. Brake fluid reservoir
3. Air filter assembly
4. Battery
5. Relay box
6. Engine oil filler cap
7. Engine oil dipstick
8. Windshield washer fluid reservoir
9. Engine coolant reservoir
10. Power steering fluid reservoir
11. Automatic transmission fluid dipstick

Maintenance and care

ENGINE OIL

Checking the engine oil

Refer to the Scheduled Maintenance Guide for the appropriate intervals for checking the engine oil .

1. Make sure the vehicle is on level ground.
2. Turn the engine off and wait a few minutes for the oil to drain into the oil pan.
3. Set the parking brake and ensure the gearshift is securely latched in P.
4. Open the hood. Protect yourself from engine heat.
5. Locate and carefully remove the engine oil indicator (dipstick).

6. Wipe the indicator clean. Insert the indicator fully, then remove it again.

- If the oil level is **between the L and H marks**, the oil level is acceptable. **DO NOT ADD OIL.**

Maintenance and care

- If the oil level is below the L mark, add enough oil to raise the level within the L and H range.

- Oil levels above the H mark may cause engine damage. Some oil must be removed from the engine by a service technician.
7. Put the indicator back in and ensure it is fully seated.

Adding engine oil

1. Check the engine oil. For instructions, refer to *Checking the engine oil* in this chapter.
2. If the engine oil level is not within the normal range, add only certified engine oil of the recommended viscosity. Remove the engine oil filler cap and use a funnel to pour the engine oil into the opening.
3. Recheck the engine oil level. Make sure the oil level is not above the H mark on the engine oil level indicator (dipstick).
4. Install the indicator and ensure it is fully seated.
5. Fully install the engine oil filler cap by turning the filler cap clockwise until three clicks can be heard.

To avoid possible oil loss, DO NOT operate the vehicle with the engine oil level indicator and/or the engine oil filler cap removed.

Maintenance and care

Engine oil and filter recommendations

Look for this Certification Trademark.

Use SAE 5W-30 motor oil certified for gasoline engines by the American Petroleum Institute (API).

Motor oil displaying the API Certification Trademark will meet all requirements for your vehicle's engine.

Ford oil specification is WSS-M2C153-G.

Do not use supplemental engine oil additives, oil treatments or engine treatments. They are unnecessary and could, under certain conditions, lead to engine damage which is not covered by your warranty.

Change your engine oil and filter according to the appropriate schedule listed in the Scheduled Maintenance Guide.

It is recommended that you replace the engine oil drain plug washer each time the engine oil is changed.

Ford production and aftermarket (Motorcraft) oil filters are designed for added engine protection and long life. If a replacement oil filter is used that does not meet Ford material and design specifications, startup engine noises or knock may be experienced.

It is recommended you use the appropriate Motorcraft oil filter (or another brand meeting Ford specifications) for your engine application.

Maintenance and care

BRAKE FLUID(ⓘ)

Checking and adding brake fluid

Brake fluid should be checked and refilled as needed. Refer to the Scheduled Maintenance Guide for the service interval schedules:

1. Clean the reservoir cap before removal to prevent dirt or water from entering the reservoir.
2. Visually inspect the fluid level.
3. If necessary, add brake fluid until the level reaches MAX. Do not fill above this line.
4. Use only a DOT 3 brake fluid certified to meet Ford specifications. Refer to *Lubricant specifications* in the *Capacities and specifications* chapter.

Brake fluid is toxic. If brake fluid contacts the eyes, flush eyes with running water for 15 minutes. Seek medical if irritation persists. If taken internally, drink water and induce vomiting. Seek medical attention immediately.

If you use a brake fluid that is not DOT 3, you will cause permanent damage to your brakes.

Do not let the fluid level in the reservoir for the master cylinder fall below the MIN mark. If master cylinder runs dry, this may cause the brakes to fail.

Maintenance and care

WINDSHIELD WASHER FLUID

Checking and adding washer fluid

Check the washer fluid whenever you stop for fuel. The reservoir is highlighted with a  symbol.

If the level is low, add enough fluid to fill the reservoir. In very cold weather, do not fill the reservoir all the way.

Do not put washer fluid in the reservoir for the engine coolant

Checking and adding washer fluid for the liftgate

Washer fluid for the liftgate is supplied by the same reservoir as the windshield.

ENGINE COOLANT

Your engine's cooling system has been factory-filled with a 50/50 mixture of distilled water and Ford Premium Engine Coolant E2FZ-19549-AA (in Canada, Motorcraft CXC-8-B), or an equivalent premium engine coolant that meets Ford specification ESE-M97B44-A.

A **50/50 mixture** of distilled water and Ford Premium Engine Coolant provides :

- **maximum cooling system efficiency.**
- **freeze protection down to -36 degrees C (-34 degrees F).**
- **boiling protection up to 129 degrees C (265 degrees F).**
- **protection against rust and other forms of corrosion.**

Maintenance and care

The engine coolant must be maintained at the correct fluid level and concentration to work properly. If the engine coolant fluid level and concentration is not maintained correctly, damage to the engine and cooling system may result .

When the engine is cold, check the level of the engine coolant in the reservoir.

- The engine coolant should be at the “cold fill level” or within the “cold fill range” as listed on the engine coolant reservoir (depending upon application).
- Refer to the Scheduled Maintenance Guide for service interval schedules.
- Be sure to read and understand *Precautions when servicing your vehicle* in this chapter.

If the engine coolant has not been checked at the recommended interval, the engine coolant reservoir may become low or empty. If the reservoir is low or empty, add engine coolant to the reservoir. Refer to *Adding engine coolant* in this chapter.

Automotive fluids are not interchangeable; do not use engine coolant, antifreeze or windshield washer fluid outside of its specified function and vehicle location.

Adding engine coolant

Use only Ford Premium Engine Coolant E2FZ-19549-AA (in Canada, Motorcraft CXC-8-B) or a premium engine coolant that meets Ford specification ESE-M97B44-A.

- **DO NOT USE Ford Extended Life Engine Coolant F6AZ-19544-AA (orange in color).**
- **DO NOT USE a DEX-COOL® engine coolant or an equivalent engine coolant that meets Ford specification WSS-M97B44-D.**

Maintenance and care

- **DO NOT USE alcohol or methanol antifreeze or any engine coolants mixed with alcohol or methanol antifreeze.**
- **DO NOT USE supplemental coolant additives in your vehicle. These additives may harm your engine's cooling system.**
- **DO NOT MIX recycled coolant and conventional coolant together in your vehicle. Mixing of engine coolants may harm your engine's cooling system.**
- **The use of an improper coolant may harm engine and cooling system components and may void the warranty of your vehicle's engine cooling system. If you are unsure which type of coolant your vehicle requires, contact your local dealer.**

Do not put engine coolant in the windshield washer fluid reservoir. If engine coolant is sprayed onto the windshield, it could make it difficult to see through the windshield.

When the engine is cool, add a **50/50 mixture** of engine coolant and distilled water to the engine coolant reservoir, until the coolant is at the “cold fill level” or within the “cold fill range” as listed in the engine coolant reservoir (depending upon application).

- **NEVER increase the coolant concentration above 60%.**
- **NEVER decrease the coolant concentration below 40%.**
- **Engine coolant concentrations above 60% or below 40% will decrease the freeze protection characteristics of the engine coolant and may cause engine damage.**

Plain water may be added in an emergency, but you **must** replace it with a 50/50 mixture of engine coolant and distilled water as soon as possible.

Check the coolant level in the reservoir before you drive your vehicle the next few times (with the engine cool). If necessary, add a **50/50 mixture** of engine coolant and distilled water to the engine coolant reservoir until the coolant level is at the “cold fill level” or within the “cold fill range” as listed on the reservoir (depending upon application).

Have your dealer check the engine cooling system for leaks if you have to add more than 1.0 liter (1.0 quart) of engine coolant per month.

Maintenance and care

To avoid scalding hot steam or coolant from being released from the engine cooling system, never remove the radiator cap while the engine is running or hot. Failure to follow this warning may result in damage to the engine's cooling system and possible severe personal injury.

If you must remove the radiator cap, follow these steps to avoid personal injury:

1. Before you remove the cap, turn the engine off and let it cool.
2. When the engine is cool, wrap a thick cloth around the cap. Slowly turn cap counterclockwise until pressure begins to release.
3. Step back while the pressure releases.
4. When you are sure that all the pressure has been released, use the cloth to turn it counterclockwise and remove the cap.

Recycled engine coolant

Ford Motor Company recommends the use of recycled engine coolant produced by Ford-approved processes.

Not all coolant recycling processes produce coolant which meets Ford specification ESE-M97B44-A, and use of such coolant may harm engine and cooling system components.

Always dispose of used automotive fluids in a responsible manner. Follow your community's regulations and standards for recycling and disposing of automotive fluids.

Coolant refill capacity

To find out how much fluid your vehicle's cooling system can hold, refer to *Refill capacities* in the *Capacities and specifications* chapter.

Fill your engine coolant reservoir as outlined in *Adding engine coolant* in this chapter.

Severe winter climate

If you drive in extremely cold climates (less than -36°C [-34°F]), it may be necessary to increase the coolant concentration above 50%. Refer to the chart on the coolant container to ensure the coolant concentration in your vehicle is such that the coolant will not freeze at the temperature level in which you drive during winter months.

Maintenance and care

- **NEVER increase the coolant concentration above 60%.**
- **Increased engine coolant concentrations above 60% will decrease the freeze protection characteristics of the engine coolant and may cause engine damage.**

Vehicles driven year-round in non-extreme climates should use a 50/50 mixture of engine coolant and distilled water for optimum freeze protection.

CHECKING AND ADDING POWER STEERING FLUID

Check the power steering fluid. Refer to the Scheduled Maintenance Guide for the service interval schedules. If adding fluid is necessary, use only MERCON® ATF.

1. Start the engine and let it run until it reaches normal operating temperature (the engine coolant temperature gauge indicator will be near the center of the normal area between H and C).
2. While the engine idles, turn the steering wheel left and right several times.
3. Turn the engine off.
4. Check the fluid level in the reservoir. It should be between the MIN and MAX lines. Do not add fluid if the level is in this range.
5. If the fluid is low, add fluid in small amounts, continuously checking the level until it reaches the range between the MIN and MAX lines. Be sure to put the cap back on the reservoir.

TRANSMISSION FLUID

Checking automatic transmission fluid

Refer to your Scheduled Maintenance Guide for scheduled intervals for fluid checks and changes. Your transaxle does not consume fluid. However, the fluid level should be checked if the transaxle is not working

Maintenance and care

properly, i.e., if the transaxle slips or shifts slowly or if you notice some sign of fluid leakage.

Automatic transmission fluid expands when warmed. To obtain an accurate fluid check, drive the vehicle until it is warmed up (approximately 30 km [20 miles]). If your vehicle has been operated for an extended period at high speeds, in city traffic during hot weather or pulling a trailer, the vehicle should be turned off for about 30 minutes to allow fluid to cool before checking.

1. Drive the vehicle 30 km (20 miles) or until it reaches normal operating temperature.
2. Park the vehicle on a level surface and engage the parking brake.
3. With the parking brake engaged and your foot on the brake pedal, start the engine and move the gearshift lever through all of the gear ranges. Allow sufficient time for each gear to engage.
4. Latch the gearshift lever in P (Park) and leave the engine running.
5. Remove the dipstick, wiping it clean with a clean, dry lint free rag.
6. Install the dipstick making sure it is fully seated in the filler tube.
7. Remove the dipstick and inspect the fluid level. The fluid should be in the designated areas for normal operating temperature.

Low fluid level

Do not drive the vehicle if the fluid level is at the bottom of the dipstick and the outside temperatures are above 10°C (50°F).

Correct fluid level

The transmission fluid should be checked at normal operating temperatures 66°C-77°C (150°F-170°F) on a level surface. The normal operating temperature can be reached after approximately 30 km (20 miles) of driving.

The transmission fluid should be in this range if at normal operating temperature (66°C-77°C [150°F-170°F]).

Maintenance and care

High fluid level

Fluid levels above the safe range may result in transaxle failure. An overfill condition of transmission fluid may cause shift and/or engagement concerns and/or possible damage.

High fluid levels can be caused by an overheating condition.

Adjusting automatic transmission fluid levels

Before adding any fluid, make sure the correct type is used. The type of fluid used is normally indicated on the dipstick and also in the *Lubricant specifications* section in the *Capacities and specifications* chapter.

Use of a non-approved automatic transmission fluid may cause internal transaxle component damage.

If necessary, add fluid in 250 mL (1/2 pint) increments through the filler tube until the level is correct.

If an overfill occurs, excess fluid should be removed by a qualified technician.

An overfill condition of transmission fluid may cause shift and/or engagement concerns and/or possible damage.

AIR FILTER MAINTENANCE

Refer to the Scheduled Maintenance Guide for the appropriate intervals for changing the air filter element.

For information on replacement air filter elements, refer to *Motorcraft Part Numbers* in the *Capacities and specifications* chapter.

Do not start your engine with the air cleaner removed and do not remove it while the engine is running.

Maintenance and care

CHANGING THE AIR FILTER ELEMENT

1. Release the four clamps that secure the air filter housing cover.
2. Carefully separate the two halves of the air filter housing.
3. Remove the air filter element from the air filter housing.

4. Install a new air filter element. Be careful not to crimp the filter element edges between the air filter housing and cover. This could cause filter damage and allow unmetered air to enter the engine if not properly seated.
5. Replace the air filter housing cover and secure the four clamps.

BATTERY

Your vehicle is equipped with a Motorcraft maintenance-free battery which normally does not require additional water during its life of service.

However, for severe usage or in high temperature climates, check the battery electrolyte level. Refer to the Scheduled Maintenance Guide for the service interval schedules.

Keep the electrolyte level in each cell up to the “level indicator”. Do not overfill the battery cells.

Maintenance and care

If the electrolyte level in the battery is low, you can add plain tap water to the battery, as long as you do not use hard water (water with a high mineral or alkali content). If possible, however, try to only fill the battery cells with distilled water. If the battery needs water often, have the charging system checked.

If your battery has a cover/shield, make sure it is reinstalled after the battery has been cleaned or replaced.

For longer, trouble-free operation, keep the top of the battery clean and dry. Also, make certain the battery cables are always tightly fastened to the battery terminals.

If you see any corrosion on the battery or terminals, remove the cables from the terminals and clean with a wire brush. You can neutralize the acid with a solution of baking soda and water.

Batteries normally produce explosive gases which can cause personal injury. Therefore, do not allow flames, sparks or lighted substances to come near the battery. When working near the battery, always shield your face and protect your eyes. Always provide proper ventilation.

When lifting a plastic-cased battery, excessive pressure on the end walls could cause acid to flow through the vent caps, resulting in personal injury and/or damage to the vehicle or battery. Lift the battery with a battery carrier or with your hands on opposite corners.

Keep batteries out of reach of children. Batteries contain sulfuric acid. Avoid contact with skin, eyes or clothing. Shield your eyes when working near the battery to protect against possible splashing of acid solution. In case of acid contact with skin or eyes, flush immediately with water for a minimum of 15 minutes and get prompt medical attention. If acid is swallowed, call a physician immediately.

Your automatic transaxle electronically controls the shift feel by using an adaptive learning strategy. During the first few hundred kilometers (miles) of operation, it is normal for your transaxle to have abrupt shifts. The adaptive learning strategy is maintained by power from the battery. When the battery is disconnected or a new battery is installed, the

Maintenance and care

transaxle must relearn its adaptive strategy. Optimal shifting will resume within a few hundred kilometers (miles) of operation.

If the battery has been disconnected or a new battery has been installed, the clock and the preset radio stations must be reset once the battery is reconnected.

- Always dispose of automotive batteries in a responsible manner. Follow your local authorized standards for disposal. Call your local authorized recycling center to find out more about recycling automotive batteries.

ODOR AND PARTICULATE AIR FILTRATION SYSTEM (IF EQUIPPED)

Maintenance and care

The odor and particulate air filtration system is designed to reduce the concentration of objectionable exterior odors as well as airborne particles such as dust, spores and pollen in the air being supplied to the interior of the vehicle. The extent of EXTERIOR odor reduction depends on the odor itself and the perceptual threshold of the individual. The odor and particulate filtration system gives the following benefits to customers:

- Improves the customer's driving comfort by reducing odor and particle concentration
- Improves the interior compartment cleanliness
- Protects the climate control components from particle deposits

The filter is located just in front of the windshield under the cowl grille on the passenger side of the vehicle.

To replace the filter, perform the following procedure:

1. Remove both windshield wiper arms.

- Lift the wiper arm away from the windshield surface until the wiper arm is perpendicular to the windshield surface.
- Rotate the small retaining clip at the base of the wiper arm counterclockwise while holding the wiper arm.
- Lift and remove the wiper arm while holding the retaining clip outward. Note the LH and RH wiper arms.

Maintenance and care

2. Remove the six (6) screws (B) from the cowl grille (A) at the base of the windshield.
3. Open the hood.
4. Remove the four (4) plastic screws (C) from the forward edge of the cowl leaf screen under the hood.
 - Remove the four (4) screw anchors by pushing upward on the screw anchor.
5. Disconnect the windshield washer hose at the Y connector at the rear corner of the engine compartment.

6. Lift the cowl grille from the vehicle.
7. Locate the cabin air filter on the passenger side of the vehicle.

Maintenance and care

8. Remove four (4) screws from the top surface of the cabin air filter top cover.

9. Remove the cover.

10. Remove the filter element by pulling forward on the top surface of the filter and lifting.

11. Install the new filter (A) element into the filter retaining frame (B). Ensure that you insert the three retaining tabs in the bottom of the filter frame.

12. Reinstall the filter top cover and the four (4) screws.

13. Reconnect the washer hose.

Maintenance and care

14. Position the cowl grille in place.
15. Reinstall the four (4) screw anchors and the four (4) plastic screws.
16. Close the hood.
17. Reinstall the six (6) screws in the cowl grille.
18. Reinstall the wiper arms. Ensure that you reinstall the wiper arms in the same position.
19. Push the wiper arm downward onto the wiper arm pivot until the small retaining clip snaps into the locked position.
20. Lower the wiper arm blade onto the windshield surface.

WINDSHIELD WIPER BLADES

Check the wiper blades at least twice a year or when they seem less effective. Substances such as tree sap and some hot wax treatments used by commercial car washes reduce the effectiveness of wiper blades.

Checking the wiper blades

If the wiper blades do not wipe properly, clean both the windshield and wiper blades using undiluted windshield wiper solution or a mild detergent. Rinse thoroughly with clean water. To avoid damaging the blades, do not use fuel, kerosene, paint thinner or other solvents.

Changing the wiper blades

To replace the wiper blades:

1. Pull the wiper arm away from the windshield and lock into the service position.
2. Turn the blade at an angle from the wiper arm. Push the lock pin manually to release the blade and pull the wiper blade down toward the windshield to remove it from the arm.
3. Attach the new wiper to the wiper arm and press it into place until a click is heard.

Maintenance and care

INFORMATION ABOUT TIRE QUALITY GRADES

New vehicles are fitted with tires that have their Tire Quality Grade (described below) molded into the tire's sidewall. These Tire Quality Grades are determined by standards that the United States Department of Transportation has set.

Tire Quality Grades apply to new pneumatic tires for use on passenger cars. They do not apply to deep tread, winter-type snow tires, space-saver or temporary use spare tires, tires with nominal rim diameters of 10 to 12 inches or limited production tires as defined in Title 49 Code of Federal Regulations Part 575.104(c)(2).

U.S. Department of Transportation-Tire quality grades: The U.S. Department of Transportation requires Ford to give you the following information about tire grades exactly as the government has written it.

Treadwear

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half (1 1/2) times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices, and differences in road characteristics and climate.

Traction AA A B C

The traction grades, from highest to lowest are AA, A, B, and C. Those grades represent the tire's ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning or peak traction characteristics.

Maintenance and care

Temperature A B C

The temperature grades are A (the highest), B, and C, representing the tire's resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause heat buildup and possible tire failure.

SERVICING YOUR TIRES

Checking the tire pressure

- Use an accurate tire pressure gauge.
- Check the tire pressure when tires are cold, after the vehicle has been parked for at least one hour or has been driven less than 5 km (3 miles).
- Adjust tire pressure to recommended specifications found on the tire pressure label inside the glove compartment door.

Improperly inflated tires can affect vehicle handling and can fail suddenly, possibly resulting in loss of vehicle control.

Tire rotation

Because your vehicle's tires perform different jobs, they often wear differently. To make sure your tires wear evenly and last longer, rotate them as indicated in the Scheduled Maintenance Guide. If you notice that the tires wear unevenly, have them checked.

Maintenance and care

- Four tire rotation

Replacing the tires

Replace the tires when the wear band is visible through the tire treads.

When replacing full size tires, never mix radial bias-belted, or bias-type tires. Use only the tire sizes that are listed on the Certification Label. Make sure that all tires are the same size, speed rating, and load-carrying capacity. Use only the tire combinations recommended on the label. If you do not follow these precautions, your vehicle may not drive properly and safely.

Make sure that all replacement tires are of the same size, type, load-carrying capacity and tread design (e.g., “All Terrain”, etc.), as originally offered by Ford.

Maintenance and care

Failure to follow these precautions may adversely affect the handling of the vehicle and make it easier for the driver to lose control and roll over.

Tires that are larger or smaller than your vehicle's original tires may also affect the accuracy of your speedometer.

SNOW TIRES AND CHAINS

Snow tires must be the same size and grade as the tires you currently have on your vehicle.

The tires on your vehicle have all weather treads to provide traction in rain and snow. However, in some climates, you may need to use snow tires and chains. If you need to use chains, it is recommended that steel wheels (of the same size and specifications) be used as chains may chip aluminum wheels.

Follow these guidelines when using snow tires and chains:

- Use only SAE Class S chains.
- Install chains securely, verifying that the chains do not touch any wiring, brake lines or fuel lines.
- Drive cautiously. If you hear the chains rub or bang against your vehicle, stop and re-tighten the chains. If this does not work, remove the chains to prevent damage to your vehicle.
- If possible, avoid fully loading your vehicle.
- Remove the tire chains when they are no longer needed. Do not use tire chains on dry roads.
- The suspension insulation and bumpers will help prevent vehicle damage. Do not remove these components from your vehicle when using snow tires and chains.

WHAT YOU SHOULD KNOW ABOUT AUTOMOTIVE FUELS

Important safety precautions

Do not overfill the fuel tank. The pressure in an overfilled tank may cause leakage and lead to fuel spray and fire.

Maintenance and care

The fuel system may be under pressure. If the fuel filler cap is venting vapor or if you hear a hissing sound, wait until it stops before completely removing the fuel filler cap. Otherwise, fuel may spray out and injure you or others.

If you do not use the proper fuel filler cap, excessive pressure or vacuum in the fuel tank may damage the fuel system or cause the fuel system to work improperly in a collision, which may result in possible personal injury.

Automotive fuels can cause serious injury or death if misused or mishandled.

Gasoline may contain benzene, which is a cancer-causing agent.

Observe the following guidelines when handling automotive fuel:

- Extinguish all smoking materials and any open flames before fueling your vehicle.
- Always turn off the vehicle before fueling.
- Automotive fuels can be harmful or fatal if swallowed. Fuel such as gasoline is highly toxic and if swallowed can cause death or permanent injury. If fuel is swallowed, call a physician immediately, even if no symptoms are immediately apparent. The toxic effects of fuel may not be visible for hours.
- Avoid inhaling fuel vapors. Inhaling too much fuel vapor of any kind can lead to eye and respiratory tract irritation. In severe cases, excessive or prolonged breathing of fuel vapor can cause serious illness and permanent injury.

Maintenance and care

- Avoid getting fuel liquid in your eyes. If fuel is splashed in the eyes, remove contact lenses (if worn), flush with water for 15 minutes and seek medical attention. Failure to seek proper medical attention could lead to permanent injury.
- Fuels can also be harmful if absorbed through the skin. If fuel is splashed on the skin and/or clothing, promptly remove contaminated clothing and wash skin thoroughly with soap and water. Repeated or prolonged skin contact with fuel liquid or vapor causes skin irritation.
- Be particularly careful if you are taking “Antabuse” or other forms of disulfiram for the treatment of alcoholism. Breathing gasoline vapors, or skin contact could cause an adverse reaction. In sensitive individuals, serious personal injury or sickness may result. If fuel is splashed on the skin, promptly wash skin thoroughly with soap and water. Consult a physician immediately if you experience an adverse reaction.

When refueling always shut the engine off and never allow sparks or open flames near the filler neck. Never smoke while refueling. Fuel vapor is extremely hazardous under certain conditions. Care should be taken to avoid inhaling excess fumes.

The flow of fuel through a fuel pump nozzle can produce static electricity, which can cause a fire if fuel is pumped into an ungrounded fuel container.

Use the following guidelines to avoid static build-up when filling an ungrounded fuel container:

- Place approved fuel container on the ground.
- DO NOT fill a fuel container while it is in the vehicle.
- Keep the fuel pump nozzle in contact with the fuel container while filling.
- DO NOT use a device that would hold the fuel pump handle in the fill position.

Fuel Filler Cap

Your vehicle is equipped with a threaded design fuel tank filler cap. When installing the fuel filler cap, a ratcheting mechanism allows the cap to be seated without overtightening.

Maintenance and care

When the fuel filler door is open, the left hand sliding door will not open.

When fueling your vehicle:

1. Turn the engine off.
2. Carefully turn the fuel filler cap counterclockwise, using caution to minimize the possibility of fuel spraying.
3. Remove the cap from the fuel filler pipe.
4. To install the cap, turn it clockwise until you hear at least three clicks.

If the “Service Engine Soon” indicator comes on and stays on when you start the engine, the fuel filler cap may not be properly installed. Turn off the engine, remove the cap, align the cap properly and reinstall it.

If you must replace the fuel filler cap, replace it with a fuel filler cap that is designed for your vehicle. The customer warranty may be void for any damage to the fuel tank or fuel system if the correct genuine Ford or Motorcraft fuel filler cap is not used.

The fuel system may be under pressure. If the fuel filler cap is venting vapor or if you hear a hissing sound, wait until it stops before completely removing the fuel filler cap. Otherwise, fuel may spray out and injure you or others.

If you do not use the proper fuel filler cap, excessive pressure or vacuum in the fuel tank may damage the fuel system or cause the fuel system to work improperly in a collision, which may result in possible personal injury.

Choosing the right fuel

Use only UNLEADED FUEL. The use of leaded fuel is prohibited by law and could damage your vehicle.

Do not use fuel containing methanol. It can damage critical fuel system components.

Your vehicle was not designed to use fuel or fuel additives with metallic compounds, including manganese-based compounds containing MMT.

Repairs to correct the effects of using a fuel for which your vehicle was not designed may not be covered by your warranty.

Maintenance and care

Octane recommendations

Your vehicle is designed to use “Regular” unleaded gasoline with an (R+M)/2 octane rating of 87. We do not recommend the use of gasolines labeled as “Regular” that are sold with octane ratings of 86 or lower in high altitude areas.

Do not be concerned if your engine sometimes knocks lightly. However, if it knocks heavily under most driving conditions while you are using fuel with the recommended octane rating, see your dealer or a qualified service technician to prevent any engine damage.

Fuel quality

If you are experiencing starting, rough idle or hesitation driveability problems during a cold start, try a different brand of “Regular” unleaded gasoline. “Premium” unleaded gasoline is not recommended (particularly in the United States) because it may cause these problems to become more pronounced. If the problems persist, see your dealer or a qualified service technician.

It should not be necessary to add any aftermarket products to your fuel tank if you continue to use a high quality fuel. Aftermarket products could cause damage the fuel system. Repairs to correct the effects of using a aftermarket product in your fuel may not be covered by your warranty.

Many of the world’s automakers issued the World-wide Fuel Charter that recommends gasoline specifications to provide improved performance and emission control system protection for your vehicle. Gasolines that meet the World-wide Fuel Charter should be used when available.

Cleaner air

Ford approves the use of reformulated “cleaner-burning” gasolines to improve air quality. These gasolines may contain oxygenates up to 10% ethanol or 15% MTBE.

Running out of fuel

Avoid running out of fuel because this situation may have an adverse affect on powertrain components.

Maintenance and care

If you have run out of fuel:

- You may need to crank the engine several times after refueling before the system starts to pump the fuel from the tank to the engine.
- Your “Service Engine Soon” indicator may come on. For more information on the “Service Engine Soon” indicator, refer to the *Instrumentation* chapter.

Fuel Filter

For fuel filter replacement, see your dealer or a qualified service technician. Refer to the Scheduled Maintenance Guide for the appropriate intervals for changing the fuel filter.

Replace the fuel filter with an authorized Motorcraft part. The customer warranty may be void for any damage to the fuel system if an authorized Motorcraft fuel filter is not used.

ESSENTIALS OF GOOD FUEL ECONOMY

Measuring techniques

Your best source of information about actual fuel economy is you, the driver. You must gather information as accurately and consistently as possible. Fuel expense, frequency of fillups or fuel gauge readings are NOT accurate as a measure of fuel economy. We do not recommend taking fuel economy measurements during the first 1 600 km (1 000 miles) of driving (engine break-in period). You will get a more accurate measurement after 3 000 km–5 000 km (2 000 miles–3 000 miles).

Filling the tank

The advertised fuel capacity of the fuel tank on your vehicle is equal to the rated refill capacity of the fuel tank as listed in the *Refill Capacities* chart in this “Owner Guide.” The advertised capacity is the amount of the Indicated Capacity and the Empty Reserve combined. Indicated Capacity is the difference in the amount of fuel in a full tank and a tank when the fuel gauge indicates empty. Empty Reserve is the small amount of usable fuel remaining in the fuel tank after the fuel gauge indicates empty.

The amount of Empty Reserve varies and should not be relied upon to increase driving range. When refueling your vehicle after the fuel gauge indicates empty, you might not be able to refuel the full amount of the advertised capacity of the fuel tank due to the empty reserve still present in the tank.

Maintenance and care

For consistent results when filling the fuel tank:

- Use the same filling rate setting (low — medium — high) each time the tank is filled.
- Allow three automatic click-offs when filling.
- Always use fuel with the recommended octane rating.
- Use a known quality gasoline, preferably a national brand.
- Use the same side of the same pump and have the vehicle facing the same direction each time you fill up.
- Have the vehicle loading and distribution the same every time.

Your results will be most accurate if your filling method is consistent.

Calculating fuel economy

1. Fill the fuel tank completely and record the initial odometer reading (in kilometers or miles).
2. Each time you fill the tank, record the amount of fuel added (in liters or gallons).
3. After at least three to five tank fill-ups, fill the fuel tank and record the current odometer reading.
4. Subtract your initial odometer reading from the current odometer reading.
5. Follow one of the simple calculations in order to determine fuel economy:

Multiply liters used by 100, then divide by total kilometers traveled.

Divide total miles traveled by total gallons used.

Keep a record for at least one month and record the type of driving (city or highway). This will provide an accurate estimate of the vehicle's fuel economy under current driving conditions. Additionally, keeping records during summer and winter will show how temperature impacts fuel economy. In general, lower temperatures give lower fuel economy.

Driving style — good driving and fuel economy habits

Give consideration to the lists that follow and you may be able to change a number of variables and improve your fuel economy.

Maintenance and care

Habits

- Smooth, moderate operation can yield up to 10% savings in fuel.
- Steady speeds without stopping will usually give the best fuel economy.
- Idling for long periods of time (greater than one minute) may waste fuel.
- Anticipate stopping; slowing down may eliminate the need to stop.
- Sudden or hard accelerations may reduce fuel economy.
- Slow down gradually.
- Driving at reasonable speeds (traveling at 88 km/h [55 mph] uses 15% less fuel than traveling at 105 km/h [65 mph]).
- Revving the engine before turning it off may reduce fuel economy.
- Using the air conditioner or defroster may reduce fuel economy.
- You may want to turn off the speed control in hilly terrain if unnecessary shifting between third and fourth gear occurs. Unnecessary shifting of this type could result in reduced fuel economy.
- Warming up a vehicle on cold mornings is not required and may reduce fuel economy.
- Resting your foot on the brake pedal while driving may reduce fuel economy.
- Combine errands and minimize stop-and-go driving.

Maintenance

- Keep tires properly inflated and use only recommended size.
- Operating a vehicle with the wheels out of alignment will reduce fuel economy.
- Use recommended engine oil. Refer to *Lubricant Specifications*.
- Perform all regularly scheduled maintenance items. Follow the recommended maintenance schedule and owner maintenance checks found in your vehicle Scheduled Maintenance Guide.

Conditions

- Heavily loading a vehicle or towing a trailer may reduce fuel economy at any speed.

Maintenance and care

- Carrying unnecessary weight may reduce fuel economy (approximately 0.4 km/L [1 mpg] is lost for every 180 kg [400 lb] of weight carried).
- Adding certain accessories to your vehicle (for example bug deflectors, rollover/light bars, running boards, ski/luggage racks) may reduce fuel economy.
- Using fuel blended with alcohol may lower fuel economy.
- Fuel economy may decrease with lower temperatures during the first 12–16 km (8–10 miles) of driving.
- Driving on flat terrain offers improved fuel economy as compared to driving on hilly terrain.
- Transmissions give their best fuel economy when operated in the top cruise gear and with steady pressure on the gas pedal.
- Close windows for high speed driving.

EPA window sticker

Every new vehicle should have the EPA window sticker. Contact your dealer if the window sticker is not supplied with your vehicle. The EPA window sticker should be your guide for the fuel economy comparisons with other vehicles.

It is important to note the box in the lower left corner of the window sticker. These numbers represent the Range of L/100 km (MPG) expected on the vehicle under optimum conditions. Your fuel economy may vary depending upon the method of operation and conditions.

EMISSION CONTROL SYSTEM

Your vehicle is equipped with various emission control components and a catalytic converter which will enable your vehicle to comply with applicable exhaust emission standards. To make sure that the catalytic converter and other emission control components continue to work properly:

- Use only unleaded fuel.
- Avoid running out of fuel.
- Do not turn off the ignition while your vehicle is moving, especially at high speeds.
- Have the items listed in your Scheduled Maintenance Guide performed according to the specified schedule.

Maintenance and care

The scheduled maintenance items listed in the Scheduled Maintenance Guide are essential to the life and performance of your vehicle and to its emissions system.

If other than Ford, Motorcraft or Ford-authorized parts are used for maintenance replacements or for service of components affecting emission control, such non-Ford parts should be equivalent to genuine Ford Motor Company parts in performance and durability.

Do not park, idle, or drive your vehicle in dry grass or other dry ground cover. The emission system heats up the engine compartment and exhaust system, which can start a fire.

Illumination of the “Service Engine Soon” light, charging system warning light or the temperature warning light, fluid leaks, strange odors, smoke or loss of engine power, could indicate that the emission control system is not working properly.

Exhaust leaks may result in entry of harmful and potentially lethal fumes into the passenger compartment.

Do not make any unauthorized changes to your vehicle or engine. By law, vehicle owners and anyone who manufactures, repairs, services, sells, leases, trades vehicles, or supervises a fleet of vehicles are not permitted to intentionally remove an emission control device or prevent it from working. Information about your vehicle’s emission system is on the Vehicle Emission Control Information Decal located on or near the engine. This decal identifies engine displacement and gives some tune up specifications.

Please consult your “Warranty Guide” for complete emission warranty information.

Readiness for Inspection/Maintenance (I/M) testing

In some localities, it may be a legal requirement to pass an I/M test of the on-board diagnostics system. If your “Check Engine/Service Engine Soon” light is on, refer to the description in the *Warning Lights and Chimes* section of the *Instrumentation* chapter. Your vehicle may not pass the I/M test with the “Check Engine/Service Engine Soon” light on.

If the vehicle’s powertrain system or its battery has just been serviced, the on-board diagnostics system is reset to a “not ready for I/M test”

Maintenance and care

condition. To ready the on-board diagnostics system for I/M testing, follow the procedure described below:

1. Allow the engine to cool to ambient temperature (the engine coolant temperature gauge indicator will point to C).
2. Start the engine and let it run until it reaches normal operating temperature (the engine coolant temperature gauge indicator will be near the center of the normal area between H and C).
3. Accelerate the vehicle to 88 km/h (55 mph), then quickly release the accelerator pedal completely for at least six seconds.
4. Quickly depress the accelerator pedal for a moment, then drive the vehicle at a speed of 86 to 96 km/h (53 to 60 mph) for at least five minutes.
5. Bring the vehicle to a complete stop.
6. Accelerate the vehicle to 55 km/h (35 mph), and maintain the speed for 20 seconds.
7. Repeat steps five and six at least three times.
8. Accelerate the vehicle to 88 km/h (55 mph), and maintain the speed for at least three minutes.
9. Bring the vehicle to a complete stop and turn the engine off.
10. Repeat steps one through nine at least one more time.

If step one through eight are interrupted, repeat the preceding step. Any safe driving mode is acceptable between steps. Once started, do not turn off the engine until step seven is completed.

EXTERIOR BULBS

Replacing exterior bulbs

It is a good idea to check the operation of the following lights frequently:

- Headlamps
- Turn signals
- Cornering lamps
- High-mount brakelamp
- Tail lamps
- Brakelamps
- Backup lamps
- License plate lamps

Maintenance and care

Do not remove lamp bulbs unless they will be replaced immediately. If a bulb is removed for an extended period of time, contaminants may enter the lamp housings and affect performance.

Replacing headlamp bulbs

To remove the headlamp bulb:

1. Make sure headlamp switch is in OFF position, then open the hood.
2. Disconnect the electrical connector from the bulb by pulling rearward.

3. Remove the bulb retaining ring by rotating it counterclockwise (when viewed from the rear) to free it from the bulb socket, and slide the ring off the plastic base. Keep the ring to retain the new bulb.

4. Without turning, remove the old bulb from its socket by gently pulling it straight back out of the lamp assembly.

To install the new bulb:

Handle a halogen headlamp bulb carefully and keep out of children's reach. Grasp the bulb only by its plastic base and do not touch the glass. The oil from your hand could cause the bulb to break the next time the headlamps are operated.

1. With the flat side of the new bulb's plastic base facing upward, insert the glass end of the bulb into the lamp assembly. Turn the bulb left or right to align the grooves in the plastic base with the tabs in the lamp assembly. When the grooves are aligned, push the bulb into the lamp assembly until the plastic base contacts the rear of the lamp assembly.

Maintenance and care

2. Install the bulb retaining ring over the plastic base until it contacts the rear of the socket by rotating clockwise until you feel a “stop.”
3. Connect the electrical connector into the rear of the plastic base until it snaps, locking it into position.
4. Turn the headlamps on and make sure they work properly. If the headlamp was correctly aligned before you changed the bulb, you should not need to align it again.

Replacing front cornering/side marker lamp bulbs

1. Remove screw from the lamp assembly.
2. Disengage lamp assembly (it has a snap fit).

3. Remove bulb socket by turning it counterclockwise about $\frac{1}{4}$ turn, then slide it out of the lamp assembly.
4. Carefully pull bulb straight out of the socket and push in the new bulb.
5. To complete installation, follow removal procedure in the reverse order.

Replacing front turn signal lamp bulbs

1. Remove bulb socket by turning it counterclockwise, then slide it out of the lamp assembly.
2. Carefully pull bulb straight out of the socket and push in the new bulb.
3. To complete installation, follow removal procedure in the reverse order.

Maintenance and care

Replacing high-mount brakelamp bulbs

1. Remove the two screws and lamp assembly from vehicle.
2. Remove the bulb by rotating socket counterclockwise and pulling it out of the lamp assembly.
3. Pull bulb straight out of socket and push in the new bulb.
4. To complete installation, follow removal procedure in the reverse order.

Replacing tail lamp/backup/turn signal lamp bulbs

1. Open the liftgate to expose the lamp assemblies.
2. Remove the two screws from the lamp assembly.
3. Carefully remove the lamp assembly by pulling it rearward.
4. Rotate bulb socket counterclockwise and remove from lamp assembly.
5. Carefully pull bulb straight out of the socket and push in the new bulb.
6. To complete installation, follow removal procedure in the reverse order.

Maintenance and care

Replacing license plate lamp bulbs

1. Remove two screws, grommets and the license plate lamp assembly from the liftgate.
2. Remove bulb socket by turning counterclockwise.
3. Carefully pull the bulb from the socket and push in the new bulb.
4. Install the lamp assembly on liftgate with two grommets, ensuring the grommets are pushed all the way in to the liftgate and secure with two screws.

Using the right bulbs

Function	Number of bulbs	Trade number
Parking lamps (front)	2	3157
Headlamps	2	9007
License plate lamps	2	194
High mount brakelamps	2	912
Backup lamps	2	3156
Brakelamps	1	3157
Cornering lamps	2	3157
Side marker lamps	2	194
Cargo liftgate lamp	1	211-2
Dome lamps	2	211-2
Turn signal lamps (front)	2	3157NA (amber)
Turn signal lamps (rear)	2	3156
Tail Lamps	2	3157
Personal reading lamps	2	578

Maintenance and care

Function	Number of bulbs	Trade number
Stepwell lamps	4	194
Glove compartment	1	194
All replacement bulbs are clear in color except where noted.		
To replace all instrument panel lights - see your dealer.		

AIMING THE HEADLAMPS

The alignment of your headlamps should be checked by a qualified service technician if:

- Oncoming motorists frequently signal you to deactivate your high beams, and your high beams are not activated.
- The headlamps do not seem to provide enough light for clear night vision.
- The headlamp beams are pointed substantially away from a slightly down and to the right position.

CLEANING AND CARING FOR YOUR VEHICLE

Refer to the Customer Assistance chapter for a list of Ford-approved cleaners, polishes and waxes.

Washing your vehicle

Wash your vehicle regularly with cold or lukewarm water. Never use strong detergents or soap. If your vehicle is particularly dirty, use a quality car wash detergent. Always use a clean sponge, washing glove or similar device and plenty of water for best results. To avoid spots, avoid washing when the hood is still warm, immediately after or during exposure to strong sunlight.

During winter months, it is especially important to wash the vehicle on a regular basis. Large quantities of dirt and road salt are difficult to remove and also cause damage to the vehicle.

Maintenance and care

Remove any exterior accessories, such as antennas, before entering a car wash. If you have wax applied to the vehicle at a commercial car wash, it is recommended that you clean the wiper blades and windshield as described in *Cleaning the wiper blades and windshield*.

After washing, apply the brakes several times to dry them.

Waxing your vehicle

Waxing your vehicle on a regular basis will reduce minor scratches and paint damage.

Wax when water stops beading on the surface. This could be every three or four months, depending on operating conditions.

Use only carnauba or synthetic-based waxes. Use cleaning fluid or alcohol with a clean cloth to remove any bugs before waxing vehicle. Use tar remover to remove any tar spots.

Avoid getting wax on the windshield, or on any surfaces which appear coarse or bumpy. If you have wax applied at a commercial car wash, it is recommended that you clean the wiper blades and windshield as described in *Cleaning the wiper blades and windshield*.

Repairing paint chips

Minor scratches or paint damage from road debris may be repaired with the Ultra Touch Prep and Finishing Kit (#F7AZ-19K507-BA), Lacquer Touch-up Paint (#ALBZ-19500-XXXXA), or Exterior Acrylic Spray Lacquer (#ALAZ-19500-XXXXA) from the Ford Car Care Chemicals line. Please note that the part numbers (shown as XXXX above) will vary with your vehicle's specific coloring. Observe the application instructions on the products.

Remove particles such as bird droppings, tree sap, insect remains, tar spots, road salt and industrial fallout immediately.

Cleaning the wheels

Wash with the same detergent as the body of your vehicle. Do not use acid-based or alcohol-based wheel cleaners, steel wool, fuel or strong detergents. Never use abrasives that will damage the finish of special wheel surfaces. Use a tar remover to remove grease and tar.

The brushes used in some automatic car washes may damage the finish on your wheels. Before going to a car wash, find out if the brushes are abrasive.

Maintenance and care

Cleaning the engine

Engines are more efficient when they are clean because grease and dirt buildup keep the engine warmer than normal. When washing:

- Take care when using a power washer to clean the engine. The high pressure fluid could penetrate the sealed parts and cause damage.
- Do not spray with cold water to avoid cracking the engine block or other engine components.
- Never apply anything to the drive belt (including belt dressing).

- Cover the highlighted areas to prevent water damage when cleaning the engine.
- Never wash or rinse the engine while it is running; water in the running engine may cause internal damage.

Cleaning non-painted plastic exterior parts

Use vinyl cleaner for routine cleaning. Clean with a tar remover if necessary. Do not clean plastic parts with thinners, solvents or petroleum-based cleaners.

Maintenance and care

Cleaning the exterior lamps

Wash with the same detergent as the exterior of your vehicle. If necessary, use a tar remover such as Ford Extra Strength Tar and Road Oil Remover (B7A-19520-AA) or tar remover if necessary.

To avoid scratching the lamps, do not use a dry paper towel, chemical solvents or abrasive cleaners.

Cleaning the wiper blades, windshield and rear windshield

If the wiper blades do not wipe properly, clean the wiper blade rubber element with undiluted windshield washer solution or a mild detergent. To avoid damaging the blades, do not use fuel, kerosene, paint thinner or other solvents.

If the wiper still does not wipe properly, this could be caused by substances on the windshield or rear windshield such as tree sap and some hot wax treatments used by commercial car washes. Clean the outside of the windshield or rear windshield with a non-abrasive cleaner such as Ford Ultra-Clear Spray Glass Cleaner, (E4AZ-19C507-AA), available from your Ford Dealer. **Do not** use abrasive cleansers on glass as they may cause scratches. The windshield or rear windshield is clean if beads do not form when you rinse it with water. The windshield, rear windshield and wiper blades should be cleaned on a regular basis, and blades or rubber elements replaced when worn.

Cleaning the instrument panel

Clean with a damp cloth, then dry with a dry cloth.

Avoid cleaner or polish that increases the gloss of the upper portion of the instrument panel. The dull finish in this area helps protect the driver from undesirable windshield reflection.

Cleaning the overhead console

Clean with a damp cloth, then wipe dry with a dry cloth.

Avoid cleaner or polish that increases the gloss of the console. The dull finish in this area helps protect the driver from undesirable windshield reflection.

Underbody

Flush the complete underside of vehicle frequently. Keep body drain holes unplugged. Inspect for road damage.

Maintenance and care

Cleaning the built-in child seat (if equipped)

Clean with mild soap and water. Do not use household cleaning products because they may weaken the safety belt webbing or damage the vinyl parts of the seat.

The child seat liner is removable and may be machine-washed and air dried.

Cleaning the interior fabric

Remove dust and loose dirt with a whisk broom or a vacuum cleaner. Remove fresh spots immediately. Do not use household or glass cleaners. These agents can stain and discolor the fabric. Use a mild soap and water solution if necessary.

Cleaning leather seats (if equipped)

To clean, simply use a soft cloth dampened with water and a mild soap. Wipe the leather again with a damp cloth to remove soap residue. Dry with a soft cloth. For tougher soiling concerns, Ford recommends using the Deluxe Leather Care Kit F8AZ-19G253-AA, which is available from your Ford Dealer. This mild cleaner and special pad, cleans the leather and maintains its natural beauty. Follow the instructions on the cleaner label. Regular cleaning of your leather upholstery helps maintain its resiliency and color.

Do not use household cleaning products, alcohol solutions, solvents or cleaners intended for rubber, vinyl or plastics.

Cleaning and maintaining the safety belts

Clean the safety belts with a mild soap solution recommended for cleaning upholstery or carpets. Do not bleach or dye the belts, because these actions may weaken the belt webbing.

Check the safety belt system periodically to make sure there are no nicks, wear or cuts. If your vehicle has been involved in an accident, refer to the *Safety belt maintenance* section in the *Seating and safety restraints* chapter.

Inside windows

Use Ultra-Clear Spray Glass Cleaner (E4AZ-19C507-AA) for the inside windows if they become fogged.

Cleaning mirrors

Do not clean your mirrors with a dry cloth or abrasive materials. Use a soft cloth and mild detergent and water. Be careful when removing ice from outside mirrors because you may damage the reflective surface.

Capacities and specifications

MOTORCRAFT PART NUMBERS

Component	3.3L V6 engine
Engine air filter element	FA-1121
Cabin air filter	FP-27
Fuel filter	FG-993
Battery (standard)	BXT-35
Battery ¹	BXT-24F
Oil filter	FL-2007
PCV Valve	EV-217
Spark plugs ²	AGSP-32FP

¹ Standard for Canada. Included with trailer tow package and rear A/C.

² Refer to Vehicle Emissions Control Information (VECI) decal for spark plug gap information.

REFILL CAPACITIES

Fluid	Ford Part Name	Capacity
Engine oil (includes filter change)	Motorcraft SAE 5W-30 Super Premium Motor Oil	4.0L (4.2 quarts)
Brake fluid	High Performance DOT 3 Motor Vehicle Brake Fluid	Fill to line on reservoir
Power steering fluid	Motorcraft MERCON® ATF	Fill to line on reservoir
Automatic transaxle fluid	Motorcraft MERCON® ATF	8.3L (8.8 quarts)
Engine coolant ¹	Premium Engine Coolant	10.6L (11.2 quarts)
Fuel tank	N/A	75.7L (20.0 gallons)
Windshield washer fluid	Ultra-Clear Windshield Washer Concentrate	Fill to line on reservoir

¹ Use Ford Premium Engine Coolant (green in color). DO NOT USE Ford Extended Life Engine Coolant (orange in color). Refer to *Adding engine coolant*, in the *Maintenance and Care* chapter.

Capacities and specifications

Vehicle identification number

The vehicle identification number is attached to a metal tag and is located on the driver side instrument panel and under the liftgate scuff plate at the bottom of the liftgate opening. (Please note that in the graphic XXXX is representative of your vehicle identification number.)

Engine and transmission serial number

The engine serial number is stamped on the engine block, and the transmission serial number is on the transmission case.

Customer assistance

GETTING ROADSIDE ASSISTANCE

To fully assist you should you have a vehicle concern, Ford offers a complimentary roadside assistance program. This program is separate from the New Vehicle Limited Warranty. The service is available:

- 24-hours, seven days a week
- for the Basic warranty period (Canada) or New Vehicle Limited Warranty period (U.S.) of three years or 60,000 km (36,000 miles), whichever comes first on Ford and Mercury vehicles, and four years or 80,000 km (50,000 miles) on Lincoln vehicles

In the United States, you may purchase additional roadside assistance coverage beyond this period through the Ford Auto Club by contacting your Ford or Lincoln-Mercury dealer.

Roadside assistance will cover:

- changing a flat tire
- jump-starts
- lock-out assistance
- fuel delivery
- towing to the nearest Ford of Canada or Ford Motor Company dealership, or towing to your selling dealership if within 56 km (35 miles). Even non-warranty related tows, like accidents or getting stuck in the mud or snow, are covered (some exclusions apply, such as impound towing or repossession).

Using roadside assistance

Complete the roadside assistance identification card and place it in your wallet for quick reference. In the United States, this card is found in the Owner Guide portfolio in the glove compartment in Ford vehicles and is mailed to you if you own a Mercury or Lincoln. In Canada, it's found in the Roadside Assistance book in the glove compartment.

To receive roadside assistance in the United States for Ford or Mercury vehicles, call 1-800-241-3673 or if you own a Lincoln vehicle, call 1-800-521-4140. In Canada call 1-800-665-2006.

Should you need to arrange assistance for yourself, Ford will reimburse a reasonable amount. To obtain information about reimbursement, call 1-800-241-3673 in the United States for Ford or Mercury vehicles; or if you own a Lincoln vehicle, call 1-800-521-4140. Call 1-800-665-2006 in Canada.

Customer assistance

Ford Extended Service Plan

You can get more protection for your new car or light truck by purchasing Ford Extended Service Plan (Ford ESP) coverage. Ford ESP is an optional service contract which is backed by Ford Motor Company or Ford Motor Service Company (in the U.S.) and Ford of Canada (in Canada). It provides the following:

- Protection against repair costs after your New Vehicle Limited Warranty period expires
- Other benefits during the warranty period (such as reimbursement for rentals and towing.)

You may purchase Ford ESP from any participating Ford or Lincoln/Mercury or Ford of Canada dealer. There are several plans available in various time, distance and deductible combinations which can be tailored to fit your own driving needs. Ford ESP also offers reimbursement benefits for towing and rental coverage. (In Hawaii, rules vary. See your dealer for details.)

When you buy Ford ESP, you receive Peace-of-Mind protection throughout the United States and Canada, provided by a network of more than 5,200 participating Ford, Lincoln/Mercury and Ford of Canada dealers.

If you did not take advantage of the Ford Extended Service Plan at the time of purchasing your vehicle, you may still be eligible. Please contact your dealer for further information. Since this information is subject to change, please ask your dealer for complete details about Ford Extended Service Plan coverage options.

Also, please be aware that some dealers offer service contracts that are not backed by Ford Motor Company or Ford of Canada. On the surface, many independent plans appear to be like Ford's. The problem is that they can often require the use of non-factory approved parts and have much more complex and restrictive claims coverage terms than Ford.

At Ford Motor Company and Ford of Canada, we are dedicated to providing Ford, Lincoln and Mercury vehicle owners with programs that will enhance your ownership experience and protect you from unexpected repair bills. Genuine Ford ESP is the only Extended Service Plan that enables us to provide that service.

Customer assistance

Getting the service you need

At home

Ford Motor Company and Ford of Canada have authorized dealerships to service your vehicle. When you need warranty repairs your selling dealer would like you to return to it for that service, but you may also take your vehicle to another Ford Motor Company dealership authorized for warranty repairs. Certain warranty repairs require special training though, so not all dealers are authorized to perform all warranty repairs. That means that depending on the warranty repair needed, the vehicle may need to be taken to another dealer. If a particular dealership can not assist you, then contact the Customer Assistance Center.

If you are not satisfied with the service you receive at the dealership, contact your Service Advisor for assistance. If the concern for inquiry remains unresolved, speak with the service manager. If you are still not satisfied, speak with the owner or general manager of the dealership. In most cases, your concern will be resolved at this level.

Ford Motor Company and Ford of Canada dealerships also carry genuine Ford parts and accessories, providing you with original equipment reliability.

Away from home

If you own a Ford or Mercury vehicle and are away from home when your vehicle needs service, or if you need more help than the dealership could provide, after following the steps described above, contact the Ford Customer Assistance Center to find an authorized dealership to help you. In the United States:

Ford Motor Company
Customer Assistance Center
16800 Executive Plaza Drive
P.O. Box 6248
Dearborn, Michigan 48121
1-800-392-3673 (FORD)
(TDD for the hearing impaired: 1-800-232-5952)

In Canada:
Customer Assistance Centre
Ford Motor Company of Canada, Limited
P.O. Box 2000
Oakville, Ontario L6J 5E4
1-800-565-3673 (FORD)

Customer assistance

If you own a Lincoln vehicle and are away from home when your vehicle needs service, or if you need more help than the dealership could provide, after following the steps described above, contact the Ford Customer Assistance Center to find an authorized dealership to help you. In the United States:

Ford Motor Company
Customer Assistance Center
16800 Executive Plaza Drive
P.O. Box 6248
Dearborn, Michigan 48121
1-800-521-4140
(TDD for the hearing impaired: 1-800-232-5952)

In Canada:
Customer Assistance Centre
Ford Motor Company of Canada, Limited
P.O. Box 2000
Oakville, Ontario L6J 5E4
1-800-565-3673 (FORD)

Please have the following information available when contacting a Customer Assistance Center:

- Your telephone number (home and business)
- The name of the dealer and the city where the dealership is located
- The year and make of your vehicle
- The date of vehicle purchase
- The current odometer reading
- The vehicle identification number (VIN)

If you still have a complaint involving a warranty dispute, you may wish to contact the Dispute Settlement Board (U.S.) or the Mediation/Arbitration Program (Canada).

In the United States, a warranty dispute must be submitted to the Dispute Settlement Board before taking action under the Magnuson-Moss Warranty Act, or to the extent allowed by state law, before pursuing replacement or repurchase remedies provided by certain state laws. This dispute handling procedure is not required prior to enforcing state created rights or other rights which are independent of the Magnuson-Moss Warranty Act or state replacement or repurchase laws.

Customer assistance

THE DISPUTE SETTLEMENT BOARD (U.S. only)

The Dispute Settlement Board is:

- an independent, third-party arbitration program for warranty disputes
- available free to owners and lessees of qualifying Ford Motor Company vehicles

The Dispute Settlement Board may not be available in all states. Ford Motor Company reserves the right to change eligibility limitations, modify procedures and/or to discontinue this service without notice and without incurring obligations per applicable state law.

What kinds of cases does the Board review?

Unresolved warranty repair concerns or vehicle performance as designed concerns on Ford/Mercury and Lincoln cars and Ford/Mercury and Lincoln light trucks which are within the terms of any applicable written new vehicle warranty are eligible for review, except those involving:

- a non-Ford product
- a non-Ford dealership
- sales disputes between customer and dealer except those associated with warranty repairs or concerns with the vehicle's performance as designed
- a request for reimbursement of consequential expenses unless a service or product concern is being reviewed
- items not covered by the New Vehicle Limited Warranty (including maintenance and wear items)
- alleged personal injury/property damage claims
- cases currently in litigation
- vehicles not used primarily for family, personal or household purposes (except in states where the Dispute Settlement Board is required to review commercial vehicles)
- vehicles with non-U.S. warranties

Concerns are ineligible for review if the New Vehicle Limited Warranty has expired at receipt of your application and, in certain states eligibility is dependent upon the customer's possession of the vehicle.

Eligibility may differ according to state law. For example, see the unique brochures for California, West Virginia, Georgia and Wisconsin purchasers/lessees.

Customer assistance

Board membership

The Board consists of:

- three consumer representatives
- a Ford or Lincoln-Mercury dealership representative

Consumer candidates for Board membership are recruited and trained by an independent consulting firm. The dealership Board member is chosen from Ford and Lincoln-Mercury dealership management, recognized for their business leadership qualities.

What the Board needs

To have your case reviewed you must complete the application in the DSB brochure and mail it to the address provided on the application form.

Your application is reviewed and, if it is determined to be eligible, you will receive an acknowledgment indicating:

- the file number assigned to your application
- the toll-free phone number of the DSB's independent administrator

Your dealership and a Ford Motor Company representative will then be asked to submit statements.

To properly review your case, the Board needs the following information:

- legible copies of all documents and maintenance or repair orders relevant to the case
- the year, make, model, and Vehicle Identification Number (VIN) listed on your vehicle ownership license
- the date of repair(s) and mileage at the time of occurrence(s)
- the current mileage
- the name of the dealer(s) who sold or serviced the vehicle
- a brief description of your unresolved concern
- a brief summary of the action taken by the dealer(s) and Ford Motor Company
- the names (if known) of all the people you contacted at the dealership(s)
- a description of the action you expect to resolve your concern

Customer assistance

You will receive a letter of explanation if your application does not qualify for Board review.

Oral presentations

If you would like to make an oral presentation, indicate YES to question #6 on the application. While it is your right to make an oral presentation before the Board, this is not a requirement and the Board will decide the case whether or not an oral presentation is made. Oral presentation may be requested by the Board as well.

Making a decision

Board members review all available information related to each complaint, including oral presentations, and arrive at a fair and impartial decision.

Every effort is made to decide the case within 40 days of the date that all requested information is received by the Board. Since the Board generally meets once a month, it may take longer for the Board to consider some cases.

After a case is reviewed, the Board mails you a decision letter and a form on which to accept or reject the Board's decision. The decisions of the Board are binding on Ford (and, in some cases, on the dealer) but not on consumers who are free to pursue other remedies available to them under state or federal law.

To Request a DSB Brochure/Application

For a brochure/application, speak to your dealer or write/call to the Board at the following address/phone number:

Dispute Settlement Board
P.O. Box 5120
Southfield, MI 48086-5120
1-800-428-3718

You may also contact the North American Customer Assistance Center at 1-800-392-3673 (Ford), TDD for the hearing impaired: 1-800-232-5952 or by writing to the Center at the following address:

Ford Motor Company
Customer Assistance Center
16800 Executive Plaza Drive
P.O. Box 6248
Dearborn, Michigan 48121

Customer assistance

GETTING ASSISTANCE OUTSIDE THE U.S. AND CANADA

Before exporting your vehicle to a foreign country, contact the appropriate foreign embassy or consulate. These officials can inform you of local vehicle registration regulations and where to find unleaded fuel.

If you cannot find unleaded fuel or can only get fuel with an anti-knock index lower than is recommended for your vehicle, contact a district or owner relations/customer assistance office.

The use of leaded fuel in your vehicle without proper conversion may damage the effectiveness of your emission control system and may cause engine knocking or serious engine damage. Ford Motor Company/Ford of Canada is not responsible for any damage caused by use of improper fuel.

In the United States, using leaded fuel may also result in difficulty importing your vehicle back into the U.S.

If your vehicle must be serviced while you are traveling or living in Central or South America, the Caribbean, or the Middle East, contact the nearest Ford dealership. If the dealership cannot help you, write or call:

FORD MOTOR COMPANY
WORLDWIDE DIRECT MARKET OPERATIONS
1555 Fairlane Drive
Fairlane Business Park #3
Allen Park, Michigan 48101
U.S.A.
Telephone: (313) 594-4857
FAX: (313) 390-0804

If you are in another foreign country, contact the nearest Ford dealership. If the dealership employees cannot help you, they can direct you to the nearest Ford affiliate office.

If you buy your vehicle in North America and then relocate outside of the U.S. or Canada, register your vehicle identification number (VIN) and new address with Ford Motor Company Worldwide Direct Market Operations.

FORD CAR CARE PRODUCTS FOR YOUR VEHICLE

Ford has many quality products available from your dealer to clean your vehicle and protect its finishes. For best results, use the following or products of equivalent quality:

Ford Custom Clearcoat Polish*

Customer assistance

Ford Custom Silicone Gloss Polish
Ford Custom Vinyl Protectant*
Ford Deluxe Leather and Vinyl Cleaner
Ford Extra Strength Tar and Road Oil Remover*
Ford Extra Strength Upholstery Cleaner
Ford Metal Surface Cleaner
Ford Multi-Purpose Cleaner*
Motorcraft Car Wash Concentrate
Motorcraft Carlite Glass Cleaner
Ford Spot and Stain Remover*
Ford Super Premium Tire and Trim Dressing
Ford Triple Clean
Ford Ultra-Clear Spray Glass Cleaner

* May be sold with the Motorcraft name

A wide selection of Ford accessories are available for your vehicle through your local authorized Ford, Lincoln-Mercury or Ford of Canada dealer. These quality accessories have been specifically engineered to fulfill your automotive needs; they are custom designed to complement the style and aerodynamic appearance of your vehicle. In addition, each accessory is made from high quality materials and meets or exceeds Ford's rigid engineering and safety specifications. Ford accessories are warranted for up to 12 months or 20,000 km (12,000 miles) on all cars and light trucks and 12 months with unlimited distance on medium/heavy duty trucks unless the accessory is installed on a new vehicle, then the warranty becomes the balance of the new vehicle's warranty or the accessories warranty, whichever is greater. See your dealer for complete warranty information and availability.

Not all accessories are available for all models.

For maximum vehicle performance, keep the following information in mind when adding accessories or equipment to your vehicle:

- When adding accessories, equipment, passengers and luggage to your vehicle, do not exceed the total weight capacity of the vehicle or of the front or rear axle (GVWR or GAWR as indicated on the Safety compliance certification label). Consult your dealer for specific weight information.
- The Federal Communications Commission (FCC) and Canadian Radio Telecommunications Commission (CRTC) regulate the use of mobile communications systems - such as two-way radios, telephones and theft alarms - that are equipped with radio transmitters. Any such equipment installed in your vehicle should comply with FCC or CRTC regulations and should be installed only by a qualified service technician.
- Mobile communications systems may harm the operation of your vehicle, particularly if they are not properly designed for automotive use or are not properly installed. When operated, such systems may cause the engine to stumble or stall. In addition, such systems may be damaged or their performance may be affected by operating your vehicle. (Citizens band [CB] transceivers, garage door openers and other transmitters with outputs of five watts or less will not ordinarily affect your vehicle's operation.)
- Ford cannot assume responsibility for any adverse effects or damage that may result from the use of such equipment.

ORDERING ADDITIONAL OWNER'S LITERATURE

To order the publications in this portfolio in the United States:

Make checks payable to:

HELM, INCORPORATED

P.O. Box 07150

Detroit, Michigan 48207

For a free publication catalog, order toll free: 1-800-782-4356

Monday-Friday 8:00 a.m. - 6:00 p.m. EST,

for credit card holders only

To order the publications in this portfolio in Canada:

Make cheques payable to:

Ford Motor Company of Canada, Ltd.

Service Publications

P.O. Box 1580, Station B

Mississauga, Ontario, Canada L4Y 4G3

or order toll free: 1-800-387-4966

Monday-Friday 8:00 a.m. - 6:00 p.m. EST,

for credit card holder orders only

Reporting safety defects

REPORTING SAFETY DEFECTS (U.S. ONLY)

If you believe that your vehicle has a defect that could cause a crash, or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Ford Motor Company.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer or Ford Motor Company.

To contact NHTSA, you may either call the Auto Safety Hotline toll-free at 1-800-424-9393 (202-366-0123 in the Washington D.C. area) or write to:

NHTSA
U.S. Department of Transportation
400 Seventh Street
Washington D.C. 20590

You can also obtain other information about motor vehicle safety from the Hotline.

Filling station information

Item	Information
Required fuel	Unleaded fuel only - 87 octane
Fuel tank capacity	75.7L (20.0 gallons)
Engine oil capacity (includes filter change)	4.0L (4.2 quarts). Use Motorcraft SAE 5W-30 Super Premium Motor Oil, Ford specification WSS-M2C153-G.
Tire size and pressure	Refer to the Certification Label on inside of driver's door.
Hood release	Pull handle under the left side of the instrument panel.
Coolant capacity ¹	10.6L (11.2 quarts)
Power steering fluid capacity	Fill to line on reservoir. Use Motorcraft MERCON® ATF.
Automatic transmission fluid capacity ²	8.3L (8.8 quarts). Use Motorcraft MERCON® ATF.

¹ Use Ford Premium Engine Coolant (green in color). DO NOT USE Ford Extended Life Engine Coolant (orange in color). Refer to *Adding engine coolant, in the Maintenance and Care chapter*.

² Ensure the correct automatic transmission fluid is used. Transmission fluid requirements are indicated on the dipstick or on the dipstick handle. MERCON® and MERCON® V are not interchangeable. DO NOT mix MERCON® and MERCON® V. Refer to your Scheduled Maintenance Guide to determine the correct service interval.
